WEST, TUBAC, AND WILLOW
VALLEY WATER DISTRICTS AND
FOR CONSIDERATION OF
CONSOLIDATION PROPOSALS

Docket No. WS-01303A-20-0177

**RESPONSE TO PROCEDURAL
ORDER**

In response to the Administrative Law Judge’s Procedural Order dated November 12, 2021, EPCOR Water Arizona Inc. (“EPCOR” or “Company”) provides the following attached schedules and other information conforming to the recommendations in the Recommended Opinion and Order (“ROO”):

1. A final rate design reflecting the findings and conclusion in the ROO;

22
23
24
25
26

2. Redline versions of its Tariffs and Plans of Administration, showing ROO-required changes (including EPCOR-proposed changes accepted in the ROO);
3. A summary of the bill impacts of consolidation on residential customers in the Company's current Districts;
4. A calculation of the Rate Case Expense Surcharge consistent with the conclusions in the ROO, including the methodology used for the calculation, as well as the bill impacts.

With regard to the three-year phase-in of the consolidated rate design, given the voluminous nature of filing H Schedules for each year of the phase-in, the Company is only including H schedules for the final year of the phase-in and summary sheets detailing the rates and proof of revenues for years 1 and 2 of the phase-in.

In addition, at the time of this filing, EPCOR will also deliver to the Hearing Division the required USB flash drive containing electronic versions of Schedules H-1 through H-5, with formulae intact to provide a proof of revenue, *i.e.*, rates applied to billing determinants.

Although the ROO provided direction as to rate design elements needed for creating these schedules, the Company also notes the following assumptions utilized to prepare the schedules:

- 1) Full consolidation of all water districts, excluding Mohave Water and North Mohave Water Districts, referred to as Group A in the ROO;
- 2) Consolidation of the Mohave Water and North Mohave Water Districts referred to as Group B in the ROO.

1 In addition to the naming conventions discussed above, the Company notes the
2 following in relation to the schedules attached as they relate to EPCOR's interpretation of
3 the resolutions in the ROO:

4 1) The Company is unable to calculate the same revenue increase and associated
5 total revenue requirement by making the adjustments identified in the ROO to its post
6 hearing schedules. Based on the adjustments to the Company's post hearing position
7 summarized below, EPCOR calculates a revenue increase of \$4,924,322 versus the ROO's
8 \$4,569,706, a difference of \$354,616. EPCOR's adjustments to its Post Hearing Operating
9 Expenses before taxes were as follows:

- | | | | |
|----|----|--|------------|
| 10 | a. | Remove Amortizations of Acquisition Premiums | \$ 49,856 |
| 11 | | | |
| 12 | b. | Remove Weather Normalization Adjustment | \$ 898,823 |
| 13 | | | |
| 14 | c. | Remove CPI Adjustment except Customer Care Billing | \$ 72,990 |

15 The Company believes any missing adjustment(s) will likely correct the immaterial
16 difference in the recommended Fair Value Rate Base ("FVRB").¹ The Company also notes
17 that for purposes of the ROO's recommendation to disallow the Company's proposed CPI
18 Adjustment, except for the Customer Care Billing cost adjustment, two partial adjustments
19 had been reflected in its rebuttal filing in response to Staff's concerns with the use of
20 estimated CPI factors.²

21 2) Although EPCOR's calculations of the revenue requirement resulting from the
22 resolutions in the ROO do not fully align with the ROO's recommended revenue

23 ¹ The ROO recommends FVRB for Group A of \$481,841,187 and for Group B of
24 \$44,156,873 whereas, EPCOR calculated FVRB of \$481,874,302 and \$44,164,107,
25 respectively, a difference of only \$33,115 for Group A and \$7,234 for Group B.

26 ² ADJ JBP-IS34 REB and ADJ JPG-IS35 REB were included in the Company's Post
Hearing adjustments to partially adjust the CPI rate used to eliminate the estimated CPI
rates used in the Direct Case.

1 requirement, the Company has used the ROO’s calculations in designing the rates for Group
2 A and Group B. Using that target, it appears that the rates outlined on page 110 of the ROO
3 do not meet the revenue requirement targets for the stand-alone rate design in some districts
4 primarily due to the rounding of the commodity rates to two decimal places versus rounding
5 to four decimal places.

6 3) While reviewing the ROO’s residential rates for the Company’s proposed
7 Scenario 1 shown for comparative purposes on pages 133 and 134 of the ROO, it appears
8 that both the 5/8-inch and 3/4-inch rates for Basic Service Charges (“BSC”) were identical
9 in a district where only 3/4-inch meters are available or the norm. Although the Company
10 agrees with this practice, if a meter multiplier is applied in the districts that have 5/8-inch
11 meters, then the 3/4-inch meter rates will not be consistent. Clarification of the intention
12 regarding the treatment of 5/8-inch and 3/4-inch rates for BSCs would provide better
13 direction in applying meter multipliers. EPCOR has been moving toward the use of a meter
14 multiplier of 1X for the 5/8-inch rate instead of the AWWA meter multiplier of 1.5X. This
15 results in equal rates for the 3/4-inch rate and limits the number of customers seeking to
16 downsize their existing meters to capitalize on a lower BSC after a rate decision and
17 provides a better opportunity for the Company to achieve its authorized rate of return.

18 The Company’s rate design for both Group A and Group B follows the ROO’s
19 direction regarding the use of the AWWA meter multipliers. However, EPCOR notes that
20 a significant number of customers currently on a 1-inch meter might qualify for a 3/4-inch
21 meter based on the plumbing code and number of fixtures in their homes. The 2.5X meter
22 multiplier applied to determine the BSC for the 1-inch rate often leads to meter downsizing
23 after a rate decision in those cases.

24 4) Currently, Private Fire is charged a flat rate per month. This has evolved
25 because typically there is not a meter on these lines but there is a separate service line for
26

1 fire sprinklers. Although it is nominal, a \$10.00 per month BSC has been used in the past.
2 The ROO removes the BSC and recommends the use of a volumetric charge. As there is
3 no meter on these lines, this will lead to no charges for Private Fire Service applied to these
4 accounts and that cost of service will be spread over other customers. The attached
5 schedules comply with the ROO's directive for Private Fire service.

6 5) For Havasu RV rate schedules that are served through a master meter and
7 currently billed on a per unit (lot) basis, the Company has interpreted the ROO to require a
8 Basic Service Charge based on meter size with a corresponding rate determined by applying
9 American Water Works Association's (AWWA) recommended meter multipliers. To
10 accomplish the ROO's directives, EPCOR modified the billing determinants previously
11 used in preparing its rate design to reflect the number of master-metered accounts within
12 each of the applicable Havasu rate schedules and applied the Basic Service Charge based
13 on the meter sizes with volumes billed at the corresponding tier rates.

14 EPCOR's current Havasu RV rates are based on the number of lots served by a
15 master meter with a reduced residential BSC rate (currently \$18.50) and a 2-tier commodity
16 charge based on the meter size. Although the Company believes the current rate design
17 based on the number of lots and volumes of water used more accurately allocates this class
18 of customers' cost of service, the Company included the billing determinants to allow
19 development of the rate design based on the ROO's instructions and has reflected those
20 billing determinants in the Group A consolidated rate design.

21
22 6) Another assumption that was necessary in the development of the rate design for
23 the consolidated Group A recommended in the ROO pertains to turf rates. The ROO
24 discusses applying a 75% discount to the second tier rate for turf customers but is silent on
25 the rate for the PV Country Club for which there is a long history of a discount on the turf
26 rates, including the interim rates set in Decision No. 77147 (issued April 16, 2019). EPCOR

proposed continuing this discount in its proposed tariff and no party addressed it. Accordingly, the attached rate design reflects the 75% discount on the second tier rate for turf customers in the Group A rate design and the contract discount for the Paradise Valley Country Club was applied to the turf tariff rates.

7) In its low income surcharge POA (attached to this filing), the Company has proposed to reduce the low income surcharge to zero upon receipt of a Decision in this docket until the new surcharge can be calculated by March 31, 2022. Given the time needed for this new calculation, this will enable EPCOR the opportunity to compute a consolidated low income surcharge incorporating the revised tier structure volumes for the newly consolidated areas because those areas are nearing the end of the calendar year and the annual reporting and true-up calculation will be due by March 31, 2022.

8) In determining the Purchased Water Adjustment Mechanism (“PWAM”) factor applied to each area within the consolidated Group A, the Company has allocated any existing PWAM costs over the sales volumes of the consolidated Group A.

9) Although the compliance language of the ROO at page 169 requires that plans of administration (“POAs”) be filed for the Cross-Connection and/or Backflow Tariffs, Curtailment Tariffs, and BMP Tariffs, these tariffs should not require POAs as the tariffs include the administration information for each tariff. Accordingly, the versions of these tariffs attached to this filing do not include POAs.
