Annual Wastewater System Report

Submitted to:

The Province of Alberta

Alberta Environment and Protected Areas (AEPA)

As per requirements of:

Approval to Operate No. 639-03-07

February 2025

Executive Summary

The following report contains two parts, Part I: Wastewater Treatment Plant and Part II: Wastewater Collection System, in order to meet the requirements of Approval to Operate No. 639-03-07.

The 2024 Annual Wastewater Treatment Plant Report is separated into an Annual Wastewater Treatment Report, an Annual Air Pollution Control System Report, an Annual Ambient Air Report, and a summary of contraventions reported, as outlined in the Approval to Operate.

The 2024 Annual Wastewater Collection System Report includes a summary of completed projects and planned major rehabilitation projects, the interconnection control strategy, and storm and CSO volumes and loadings in addition to other requirements outlined in the Approval to Operate.

Acronyms

AAAQO	Alberta Ambient Air Quality Objectives
AEPA	Alberta Environment and Protected Areas
AQMS	Air Quality Monitoring Station
CBBRF	Clover Bar Biosolids Recycling Facility
CBOD	Carbonaceous Biological Oxygen Demand
CSO	Combined Sewer Overflow
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pumping Station
EPT	Enhanced Primary Treatment
FE	Final Effluent
FEC	Final Effluent Combined
GBWWTP	Gold Bar Wastewater Treatment Plant
H_2S	Hydrogen Sulfide
HSE	Health, Safety, and Environment
ISO	International Organization for Standardization
ML	Megalitres
MLD	Megalitres per Day
MLSS	Mixed Liquor Suspended Solids
NH_3-N	Ammonia-Nitrogen
NSR	North Saskatchewan River
ORP	Oxidation-Reduction Potential
PE	Primary Effluent
SOP	Standard Operating Procedure
TKN	Total Kjeldahl Nitrogen
TP	Total Phosphorus
TSS	Total Suspended Solids
UV	Ultraviolet
WELP	Wastewater Effluent Limit Performance
WWTP	Wastewater Treatment Plant

2024 Overview

The Gold Bar Wastewater Treatment Plant (WWTP) located on the banks of the North Saskatchewan River in Edmonton, Alberta maintains the ISO 14001:2015 (Environmental Management System) and the ISO 45001:2018 (Occupational Health and Safety Management System) certificates for its Integrated Management System.

Notable events in 2024 include construction/rehabilitation on Digester 4, commissioning of Scrubbers 5 and 6, EPT Scrubber upgrades, PE Channel Upgrades, Laboratory Facility Integration and Odour Control Improvements for Primaries 5-8. Mobilization for the Secondary Aeration Blower Upgrades began in December 2024 construction will begin in 2025. Design and planning has progressed for the Flare Expansion Project, NSR Flood Protection and Auxiliary Control Room Electrical Upgrade. At Clover Bar, acid cleaning of sludge transfer lines 1 and 2 was completed and a new dredge was procured. Planning for the Clover Bar Edmonton Waste Management Centre Groundwater Transfer was also initiated.

In 2024, there were several exceedances of the *Alberta Ambient Air Quality Objectives* (AAAQO) for H_2S. The majority of the exceedances occurred in September and October when there was less precipitation to flush the collection system, but the temperature remained warm. There were no exceedances for NO_2 or SO_2.

The true dry weather flow in 2024 was 282 MLD. 2024 hosted 6 significant wet weather events resulting in main plant bypasses and a total of 49 secondary bypasses. The plant performed well with a WWTP Effluent Limit Performance (WELP) index of 23.87%.

2024 Annual Wastewater Treatment Report

Gold Bar WWTP Performance

The Gold Bar WWTP final effluent discharge limits of Approval to Operate 639-03-07 are listed in Table 1 and the monitoring requirements are outlined in Table 2.

Table 1: Limits for Treated Wastewater (Approval to Operate Table 5-1)

Parameter	Limit
$CBOD_5$	≤ 20 mg/L monthly arithmetic mean of daily composite samples
TSS	≤ 20 mg/L monthly arithmetic mean of daily composite samples
Total Phosphorus	≤ 1.0 mg/L monthly arithmetic mean of daily composite samples
Total Ammonia-nitrogen (December 1 to May 31)	≤ 10 mg/L monthly arithmetic mean of daily composite samples
Total Ammonia-nitrogen (June 1 to November 30)	≤ 5 mg/L monthly arithmetic mean of daily composite samples
E. Coli	≤ 126 per 100 mL/monthly geometric mean
pH	6.5-8.5

Table 2: Monitoring - Wastewater System (Approval to Operate Table 6-1)

Parameter	Frequency (Minimum)	Sample Type	Sampling Location
UNTREATED WASTEWATER			
pH BOD_5 TSS Total Phosphorus Total Ammonia-nitrogen	Once per day	Composite	Untreated wastewater entering the wastewater treatment plant
Volume of Flow	Continuous, recorded daily	Calculated	Untreated wastewater entering the wastewater treatment plant
TREATED WASTEWATER			
pH BOD_5 TSS Total Phosphorus Total Ammonia-nitrogen	Once per day	Composite	Wastewater treated plant effluent prior to release to the North Saskatchewan River
E. Coli	Once per day	Grab	After ultraviolet (UV) disinfection
Acute Toxicity	Monthly	Grab	Wastewater treatment plant effluent prior to release to the North Saskatchewan River
Chronic Toxicity	Quarterly	Grab	Wastewater treatment plant effluent prior to release to the North Saskatchewan River
Volume	Continuous, recorded daily	Calculated	Wastewater treatment plant effluent prior to release to the North Saskatchewan River
Volume	Continuous, recorded daily	Calculated	Reuse water transmission main

Parameter	Frequency (Minimum)	Sample Type	Sampling Location
WASTEWATER TREATMENT PLANT BYPASS			
Release Volume	Continuous during bypass event, recorded daily	Calculated	Primary and secondary treatment bypass of wastewater at the wastewater treatment plant
pH BOD_5 TSS Total Phosphorus Total Ammonia-nitrogen	Any bypass event lasting > 2 hours	Composite	
E. Coli	Any bypass event lasting > 2 hours	Grab	
SLUDGE DISPOSAL			
Sludge Volume	Total volume	Estimated	Prior to leaving the wastewater treatment plant
Sludge Mass	Total mass	Estimated	Amount of sludge being disposed of as per the *Biosolids Management Plan*
CSO OUTFALLS AND UNAUTHORIZED RELEASE			
Release Volume	Total volume during each discharge event	Continuous during discharge event	Rat Creek CSO outfall; Hardisty-Capilano CSO outfall; Highlands CSO outfall; Cromdale CSO outfall; Strathearn CSO outfall; and unauthorized release point
pH BOD_5 TSS Total Phosphorus Total Ammonia-nitrogen *E. Coli*	Each discharge event	Composite	Rat Creek CSO outfall
		Grab	Unauthorized release point
The amount of any substance other than wastewater or storm water that is spilled or discharged accidentally or intentionally into the wastewater collection system	Each event	Estimated volume or mass	Unauthorized release point

Table 3 summarizes the monthly minimum, mean, and maximum values for parameters in Table 1 from January 1 to December 31, 2024. All analytical data in the table were developed on 24-hour composite samples collected using autosamplers at the sampling location specified in Table 2. The discrete samples for *Escherichia coli* (*E. coli*) determinations were collected at random times each day. There was also a variance to the 24-hour untreated wastewater composite samples for March 15 as noted in the March 2024 Plant Performance Report, but all sampling requirements were still met. Appendix A contains the monthly Plant Performance Reports.

2024 Annual Wastewater Treatment Plant Report

Table 5 summarizes the effluent chronic and acute toxicity testing. Both acute and chronic toxicity tests were carried out by contract laboratories in accordance with the Environment Canada Biological Test Methods (Environment Canada 1990 and 1992). The acute testing included 48-hour Rainbow Trout static toxicity, 48-hour static toxicity using *Daphnia magna* and 15-minute Microtox tests using luminescence bacteria. Seven-day *Ceriodaphnia dubia*, *Fathead minnows* and three-day P. Subcapitata survival and reproductive impairment tests were used to determine chronic toxicity. No effluent toxic events were observed in 2024.

Table 5: 2024 Effluent Toxicity

[1]LC_{50} - % effluent concentration at which there is a 50% mortality of test organisms; [2]IC_{25} - % effluent concentration at which there is a 25% reduction in growth or reproduction of test organisms; [3]NOEL - the concentration at which there was no observed effect level; [4]LOEL - the concentration at which you start seeing the lowest observable effect; [5]TOEL = NOEL/LOEL; [6]TU - the ratio of the concentration observed divided by the concentration for 50% inhibition. *Collection date 02/13/2024.

Table 6 summarizes the proficiency testing of the Gold Bar WWTP Laboratory. It includes the Laboratory z-scores achieved from analyzing proficiency testing (PT) samples for constituents required by the Approval to Operate. The 2024 PT samples were provided by the Canadian Association for Laboratory Accreditation (CALA). A PT scores greater than or equal to 70 or z-scores less than or equal to 3.000 are considered acceptable for CALA PT.

Table 6: 2024 Summary of Gold Bar Wastewater Proficiency Testing

pH by manual meter; NH3-N by AA3; TP by AA3; E.coli by MF

In 2024, a total of 107,555 million litres (ML) of wastewater was conveyed to the plant. Secondary treatment and UV disinfection was provided to 99,979 ML (93.0%) of the total raw influent flow with 4,226 ML (3.9%) of reclaimed water provided to industrial customers.

Assessment of Annual Monitoring Results

The Gold Bar WWTP Effluent Limit Performance (WELP) index for 2024 was 23.87% (Figure 1). The 2024 index was higher than the five-year average of 19.12% due to a continued focus on sustaining system reliability with maintenance and capital work and maximizing the number of process tanks/equipment in service. Additionally, there was good performance of Ostara Nutrient Recovery Facility for supernatant treatment. Figure 2 shows the annual WELP from 2005 to 2024, including the five-year average.

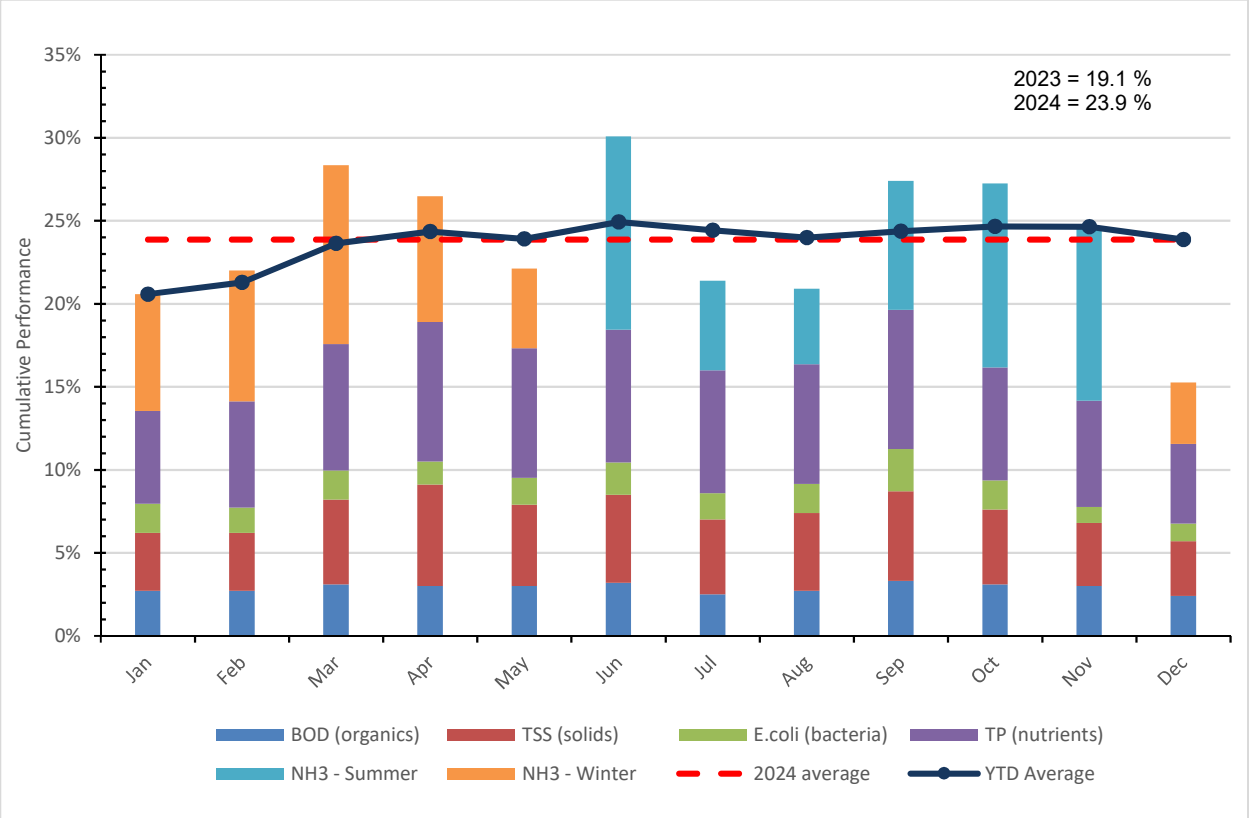

Figure 1: 2024 Monthly Gold Bar WWTP Wastewater Effluent Limit Performance (WELP) Index

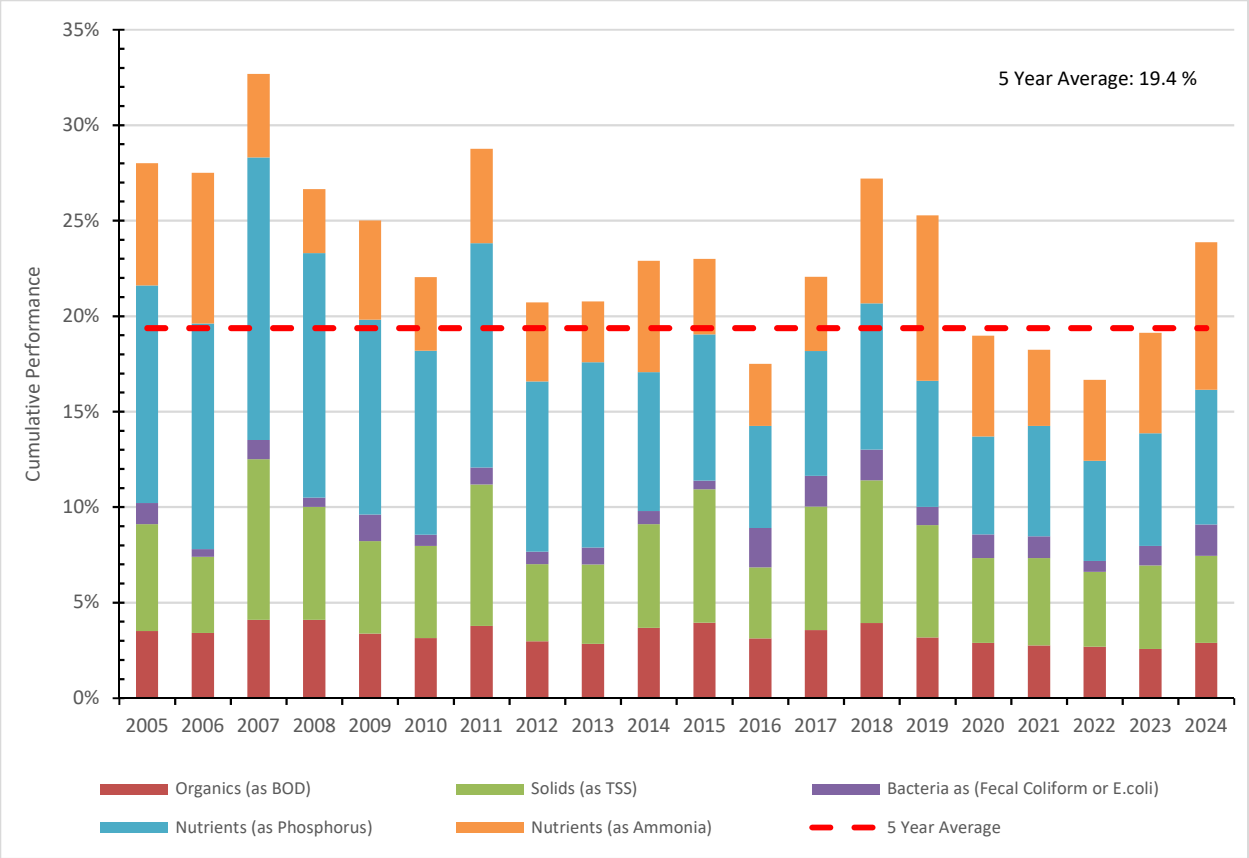

Figure 2: Gold Bar WWTP Wastewater Effluent Limit Performance (WELP Index) 2005-2024

For 2024, all of the monthly limits for Approval to Operate discharge parameters (Table 1) were met.

Chemicals Added to the Wastewater Treatment Process

As per Section 6 of the Operations Plan, the following chemicals are used in the wastewater treatment process:

- Secondary Alum
- EPT Alum
- EPT Polymer
- DAF Polymer
- Membrane Bleach
- Ostara Magnesium Chloride
- Ostara Caustic

Daily and monthly consumption of these chemicals is summarized in Appendix B.

Names of Supervising Operators

Table 7 lists all certified wastewater treatment operators, their level of certification, and their positions at Gold Bar WWTP as of December 2024. Supervising operators are also listed in the Operations Monthly Summaries in Appendix C.

Table 7: List of Certified Wastewater Treatment Operators (as of December 2024)

Name	Title	Wastewater Treatment Certification Level
Jones, Kira I	Coordinator, Hazardous Energy Isolation	IV
Lekamwasam, Janaka	Operator Crew Leader	IV
Nunes, Michael	Operator Crew Leader	IV
Penner, Jody	WWTP Lead Operator	IV
Sanche, Dagny	Coordinator, Operations Training	IV
Sandouga, Sam	Operator Crew Leader	IV
Baker, Cole	Operator Crew Leader	IV
Nieuwenhuis, Andrew	Operator Crew Leader	IV
Kelly, Adam	WWTP Operator	IV
Jama, Yusuf	WWTP Operator	IV
Omeragic, Armen	WWTP Lead Operator	IV
Holden, Derek	WWTP Operator	IV
Vogelgesang, Ryan	WWTP Operator	IV
Rees, Emma	WWTP Lead Operator	IV
Paglicauan, Jermine	Engineer, Operations	IV
Barrett, Jeremy L	Manager, Process Risk & Integration	III
Li, Bing (Frank)	WWTP Operator	III
Budden, Curt	Coordinator, Operations Shutdown	III
Rindero, Billy	Clover Bar Operations Crew Leader	III
Hahn, Kevin	Coordinator, Operations Shutdown	III
Jordan, Bradley	Coordinator, Operations Shutdown	III
Diletzoy, Kyle	WWTP Lead Operator	III
Downey, Anthony	WWTP Lead Operator	III
Lorenz, Tory	WWTP Operator	III
Ozimko, Michael	WWTP Operator	III
Price, Jeremy	WWTP Operator	III
Cousins, Kenzie	Manager, Operations Support & Training	II
Gordon, Allan	Manager, Operations	II
Gilker, Michael	WWTP Operator	II
Furber, Brandyn	WWTP Operator	II
Marling, Connor	WWTP Operator	I
Craig, Aric	WWTP Operator	I

Uncommitted Hydraulic Reserve Capacity

In 2024, Gold Bar WWTP received a total dry weather volume of 104,205 ML. This volume is the sum total of Outfall 10 effluent (99,979 ML) and membrane reclaimed water (4,226 ML). Outfall 10 effluent also includes wet weather flow that did not result in secondary bypass and any additional wet weather flow that had secondary treatment during secondary bypass events.

The average dry weather flow in 2024 was 285 million litres per day (MLD). However, the true dry weather flow was lower than 285 MLD and was approximately 282 MLD. The true dry weather average flow excludes additional flow to the plant during snow melt or rainfall, but includes inflow and infiltration (I&I). The total true dry weather volume was approximately 103,124 ML.

Based on 310 MLD of average secondary treatment capacity and a true dry weather average flow of 282 MLD, the uncommitted hydraulic reserve capacity for secondary treatment in 2024 was 28 MLD.

Wet Weather Summary

In 2024, Gold Bar WWTP had 67 days of secondary and primary plant bypasses. The total volume of secondary bypass was 3,351 ML. In addition, the total primary bypass volume was 355 ML.

There were 6 significant wet weather events with inflows to the plant greater than 1,200 MLD, all 6 resulted in a main plant bypass. The plant received a peak flow rate of approximately 1,675 MLD on August 5, 2024. The record peak flow of 2,298 MLD occurred on June 28, 2022.

Summary of Operational Issues

Key operational activities, issues, and remedial actions are outlined in the Operations Monthly Summaries in Appendix C.

2024 Annual Air Pollution Control System Report

Table 8 and Table 9 describe the air pollution control system and ambient air monitoring limits and monitoring requirements. Note Scrubber 5 and Scrubber 6 were commissioned and put into operation in 2024.

Table 8: Air Pollution Control System Operating Limits (Approval to Operate Table 5-2)

Air Pollution Control System	Monitoring Location	Parameter	Limit
East scrubber-scrubber 1; West scrubber-scrubber 2; EPT scrubber-scrubber 3; Fermenter scrubber-scrubber 4 Scrubber 5 Scrubber 6	Blowdown recirculation line before chemical makeup of each wet scrubber	pH	≥ 8.0

Summary of Air Pollution Control System Monitoring

Table 10 and Table 11 contain a monthly summary of the air pollution control system monitoring data. The data is split into two tables for ease of viewing. Appendix D contains the daily air pollution control system data.

Table 10: Air Pollution Control System Report - Part I

Month	Parameter	January	February	March	April	May	June	July	August	September	October	November	December
		Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg
Scrubber 1 (East)	*pH*	9.5	9.5	9.5	9.5	9.5	9.5	9.5	9.5	9.5	9.3	N/A	N/A
	ORP (mV)	671.4	670.0	670.1	670.1	673.8	669.3	669.9	669.7	670.4	696.6	N/A	N/A

December	Avg	18.1	434.0	N/A

The annual manual stack survey was submitted to AEPA on October 30, 2024.

Assessment of Monitoring Results

For each wet scrubber, the daily average ORP and pH was maintained above 300 mV and 8, respectively throughout the year in 2024. Refer to Table 12, Summary of Scrubber Operational Issues for more information.

Chemicals Consumed by Scrubbers

As per Section 6 of the Operations Plan, sodium hypochlorite (bleach) and caustic soda are used in the scrubbers for oxidization of H_2S and pH control, respectively. Daily and monthly consumption of these chemicals is summarized in Appendix E.

Summary of Air Pollution Control System Operational Issues

Table 12 is a summary of operational issues encountered by each air pollution control system, and the remedial actions taken to resolve the issues. Scrubber 5 and 6 were completed and commissioned in 2024. This involved several shutdowns of the EPT Scrubber, West Scrubber, Scrubber 5 and Scrubber 6 to facilitate the switchover and testing of the new scrubbers. On July 16, 2024 a 24-hour H_2S exceedance occurred at the Air Quality Monitoring Station (AQMS) during a scrubber outage which was investigated and determined to not be a result of the outage.

Table 12: Summary of Scrubber Operational Issues

Scrubber Name	Date/Time of Shutdown	Date/Time Returned to Service	Total Time Shutdown (hr)	Fence Line H2S Readings Taken?	Operational Issue	Actions Taken
Scrubber 2 (West)	1/2/2024 0:35	1/2/2024 1:04	0.5	No - shutdown less than 2 hours	Lost ORP for an hour. Bleach pump tube failure.	Shut down scrubber for troubleshooting. Switched bleach pumps.
Scrubber 2 (West)	1/4/2024 19:11	1/4/2024 21:58	2.8	Yes	Recirculation pump tripped and not starting.	Maintenance called in.
Scrubber 1 (East)	1/11/2024 17:10	1/11/2024 18:39	1.5	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/11/2024 19:52	1/11/2024 20:31	0.7	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/14/2024 18:42	1/14/2024 19:28	0.8	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/15/2024 14:24	1/15/2024 14:40	0.3	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/15/2024 23:24	1/16/2024 1:07	1.7	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/16/2024 2:44	1/16/2024 3:36	0.9	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 1 (East)	1/16/2024 14:45	1/16/2024 15:24	0.7	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower. Calibrated ORP meter.
Scrubber 3 (EPT)	2/5/2024 9:25	2/5/2024 15:57	6.5	Yes	Low recirculation flow.	Cleaned scrubber nozzles.
Scrubber 1 (East)	2/8/2024 7:31	2/8/2024 8:11	0.7	No - shutdown less than 2 hours	Blower belt required replacement.	Blower belt replaced. Recirculation pump remained running.
Scrubber 2 (West)	2/17/2024 21:43	2/28/2024 13:11	255.5	No - scrubber not shut down	Scrubber tower level slowly dropping.	Checked inline filters, bypassed softener.
Scrubber 4 (Fermenter)	2/21/2024 8:06	2/21/2024 8:21	0.2	No - shutdown less than 2 hours	Bleach pump tube failure.	Maintenance replaced tube.
Scrubber 2 (West)	3/27/2024 10:12	3/27/2024 13:43	3.5	Yes	Bleach pump air relief valve passing. Recirculation pump seized.	Maintenance repaired bleach pump air vent and recirculation pump.

Scrubber Name	Date/Time of Shutdown	Date/Time Returned to Service	Total Time Shutdown (hr)	Fence Line H2S Readings Taken?	Operational Issue	Actions Taken
Scrubber 4 (Fermenter)	4/8/2024 8:49	4/8/2024 11:01	2.2	Yes	Maintenance required.	Recirculation pump alignment and blower work.
Scrubber 3 to Scrubber 5	4/24/2024 7:48	4/24/2024 8:45	1.0	No - shutdown less than 2 hours	No issue.	Shut down Scrubber 3. Started Scrubber 5.
Scrubber 5 to Scrubber 6	4/30/2024 9:56	4/30/2024 10:04	0.1	No - shutdown less than 2 hours	No issue.	Shut down Scrubber 5. Started Scrubber 6.
Scrubber 1 (East)	5/1/2024 15:04	5/1/2024 16:06	1.0	No - shutdown less than 2 hours	Maintenance required.	Fan belt change.
Scrubber 1 (East)	5/3/2024 8:26	5/4/2024 0:06	15.7	Yes	Foaming in scrubber tower.	Drained and filled scrubber tower. Opened Channel 1 gates to try and flush foam.
Scrubber 1 (East)	5/16/2024 18:27	5/16/2024 19:29	1.0	No - shutdown less than 2 hours	Foaming in scrubber tower.	Drained and filled scrubber tower.
Scrubber 2 (West)	5/22/2024 9:35	5/22/2024 11:12	1.6	No - shutdown less than 2 hours	Maintenance required.	Fan belt change.
Scrubber 4 (Fermenter)	5/27/2024 8:23	5/27/2024 8:53	0.5	No - shutdown less than 2 hours	Bleach pump failure.	Maintenance repaired.
Scrubber 4 (Fermenter)	5/27/2024 10:37	5/27/2024 13:09	2.5	Yes	Both bleach pumps failed.	Maintenance repaired.
Scrubber 4 (Fermenter)	6/11/2024 9:03	6/11/2024 16:03	7.0	Yes	Bleach leak on pipe above recirculation pump.	Drained, flushed, and isolated for repairs.
Scrubbers 1, 2, 4, and 6	6/13/2024 7:14	6/13/2024 8:49	1.6	No - shutdown less than 2 hours	Short power outage	Planned outage for transformer switching
Scrubbers 1 and 4	6/19/2024 7:01	6/19/2024 13:51	6.8	Yes	HEI	Shut down scrubbers 1 and 4 for sump tie ins.
Scrubber 4 (Fermenter)	7/2/2024 7:54	7/2/2024 8:58	1.1	No - shutdown less than 2 hours	HEI	Scrubber 4 shut down for check valve replacement.
Scrubber 6	7/3/2024 2:13	7/3/2024 2:59	0.8	No - shutdown less than 2 hours	ORP dropped.	Allowed ORP values to restore and restarted scrubber.
Scrubber 4 (Fermenter)	7/3/2024 14:05	7/3/2024 15:37	1.5	No - shutdown less than 2 hours	Leaking check valve on caustic pump discharge.	Shut down scrubber, flushed and locked out for repair.
Scrubber 6 to Scrubber 5	7/8/2024 10:56	7/8/2024 11:15	0.3	No - shutdown less than 2 hours	No issue.	Shut down Scrubber 6. Started Scrubber 5.
Scrubber 5 & Scrubber 2 to Scrubber 6	7/16/2024 9:59	7/16/2024 14:24	4.4	Yes	Leak in caustic overpressure tank return line piping.	Shut down Scrubber 2. Started Scrubber 6. Flush, drain, and isolate for repairs.
Scrubber 6 & Scrubber 5 to Scrubber 2	8/21/2024 8:02	8/21/2024 8:18	0.3	No - shutdown less than 2 hours	DeviceNet changes required.	Shut down Scrubber 5. Started Scrubber 2 as backup.
Scrubber 2 to Scrubber 5	8/21/2024 15:12	8/21/2024 15:22	0.2	No - shutdown less than 2 hours	No issue.	Shut down Scrubber 2. Started Scrubber 5.

Scrubber Name	Date/Time of Shutdown	Date/Time Returned to Service	Total Time Shutdown (hr)	Fence Line H2S Readings Taken?	Operational Issue	Actions Taken
Scrubber 5	9/19/2024 7:50	9/19/2024 8:15	0.4	No - shutdown less than 2 hours	Scrubber 5/6 shutdown for power switch	Scrubber 5 Shutdown to switch power
Scrubber 6	9/19/2024 7:51	9/19/2024 8:18	0.5	No - shutdown less than 2 hours	Scrubber 5/6 shutdown for power switch	Scrubber 6 Shutdown to switch power
Scrubber 5	9/19/2024 10:17	9/19/2024 10:34	0.3	No - shutdown less than 2 hours	Scrubber 5/6 shutdown for power switch	Scrubber 5 Shutdown to switch power
Scrubber 6	9/19/2024 10:17	9/19/2024 10:34	0.3	No - shutdown less than 2 hours	Scrubber 5/6 shutdown for power switch	Scrubber 6 Shutdown to switch power
Scrubber 5	10/3/2024 11:03	10/3/2024 11:51	0.8	No - shutdown less than 2 hours	Scrubber 5 shutdown for maintenance	Scrubber 5 shutdown for repairs
Scrubber 4 (Fermenter)	10/7/2024 10:00	10/7/2024 11:03	1.1	Yes	Tube Failure on both bleach pumps	Shut down Scrubber to repair tubes
Scrubber 1 (East)	10/7/2024 10:02	10/7/2024 11:00	1.0	Yes	Tube Failure on both bleach pumps	Shut down Scrubber to repair tubes
Scrubber 6	10/15/2024 9:36	10/15/2024 10:09	0.6	No - shutdown less than 2 hours	Scrubber 6 down for an oil change	Scrubber 6 down for oil change
Scrubber 1 (East)	11/25/2024 10:06	TBD	N/A	No - Notification sent to AEPA of Shutdown	No load feeding the scrubber, continued running would cause potential freezing issues	Shut down Scrubber 1 until further notice
Scrubber 6	11/25/2024 12:47	11/25/2024 14:21	0.5	No - shutdown less than 2 hours	Scrubber 6 exhaust fan loose belt.	Scrubber 6 shutdown to tighten the belt.
Scrubber 5	11/26/2024 12:44	11/26/2024 13:44	0.5	No - shutdown less than 2 hours	Maintenance PM on potable water backflow preventer	Scrubber shutdown for maintenance PM
Scrubber 6	11/26/2024 12:45	11/26/2024 13:46	0.3	No - shutdown less than 2 hours	Maintenance PM on potable water backflow preventer	Scrubber shutdown for maintenance PM
Scrubber 6	12/16/2024 9:47	12/16/2024 10:00	0.2	No - shutdown less than 2 hours	Scrubber 6 DNET issue	Scrubber 6 shutdown for DeviceNet update
Scrubber 5	12/16/2024 9:47	12/16/2024 10:23	0.6	No - shutdown less than 2 hours	Scrubber 5 DNET issue and PCP - 74381 required oil change	Scrubber 5 shutdown for DeviceNet update and pump oil change

2024 Annual Ambient Air Report

Summary of Ambient Air Monitoring

The ambient air quality monitoring station (AQMS) was commissioned as of June 30, 2022. For 2024, all ambient air monitoring was completed using the AQMS. Table 13 shows the monthly summary of results from the AQMS including H_2S, NO_2, SO_2, temperature, wind speed, and wind direction. The table shows the results of the 1-hour average data for 2024.

Table 13: Summary of Ambient Air Monitoring Results - Ambient Air Quality Monitoring Station

Month	Parameter	Min	Avg	Max
January	SO_2 (ppbv)	0.4	3.3	37.9

Assessment of Monitoring Results

Table 14 shows an assessment of the monthly results from the AQMS for H_2S, NO_2, and SO_2, as compared to the *Alberta Ambient Air Quality Objectives* (AAAQO). In 2024, there were a total of 124 1-hour H_2S exceedances and 21 24-hour H_2S exceedances of the AAAQO. There were no 1-hour or 24-hour exceedances for NO_2 or SO_2. The majority of the H_2S exceedances occurred in September and October when there was less precipitation to flush the collection system, but the temperatures remained warm. The exceedances tended to occur in the evenings and nights when the temperatures dipped and there was less wind. A similar trend was observed in 2023.

Table 14: Assessment of Results of Ambient Air Monitoring

Month	Parameter	1-hour AAAQO	# of 1-hour Exceedances	24-hour AAAQO	# of 24-hour Exceedances

There were also no exceedances of the 30-day objective for SO_2 (11 ppbv), the annual objective for SO_2 (8.0 ppbv), or for the annual objective for NO_2 (24 ppbv).

Summary of Public Odour Complaints

Table 15 shows the number of odour complaints received within the Gold Bar WWTP Odour Response Boundaries and number of complaints where Gold Bar WWTP is the confirmed source of odour based on wind direction, scrubber operation, corroboration with odour model software, ambient H_2S monitoring results, and plant operations/maintenance.

Table 15: Summary of Gold Bar WWTP Odour Complaints

Month	Number of Odour Complaints	Number of Complaints where Gold Bar WWTP is the Confirmed Source of Odour
January	1	0
February	0	0
March	0	0
April	0	0
May	0	0
June	0	0
July	0	0
August	1	1
September	0	0
October	0	0
November	0	0
December	0	0
Total	**2**	**1**

Appendix F contains a detailed list of odour complaints including the steps taken to identify the odour sources and remedial actions taken to resolve the odour issues.

2024 Summary of Contraventions and Notifications to AEPA

Table 16 summarized the contraventions to Approval to Operate 639-03-07. There were 4 contraventions in 2024.

Table 16: Summary of Contraventions

Date	Summary of Contravention	AEPA Reference Number
Mar 6, 2024 17:52	On March 6 around 16:30, approximately 1 cubic meter of a mixture of grit, water, and sludge was released from a drain hose onto the ground in Hermitage Park. Contractors had launched a foam cleaning pig in the sludge line from GBWWTP to Hermitage Park and the pig got stuck. The contractor attempted to free the pig using pressurized water. The pig appeared to dislodge, causing the material to release through the drain hose into MH-D2. During this activity, the drain hose dislodged from the maintenance hole and released the material to the ground. The release was contained within the fenced area of the work site and a hydrovac truck removed the material. The spill was reported to the AEPA 24-hour hotline and a 7-day letter was submitted.	425665
May 4, 2024 15:02 AEPA Operator Rebekah	AEPA 24 hour hotline was notified regarding biosolid spill from contractor truck that occurred at 10:05 am on 88 Avenue and Highway 15. Notified that emergency crews were on site (police and fire truck), less than 30L spilled, and was cleaned up by hydrovac truck. Confirmed there was no spill into catch basins or waterway and that it was contained on road. Emergency vehicles helped block off lanes for cleanup, while keeping highway open. 7 day letter required.	427606
July 16, 2024	7-day letter submitted to AEPA by Contractor on behalf of EPCOR for a 24-hour H2S exceedance that occurred concurrently with a scrubber outage, so 7-day letter waiver did not apply.	430514
Nov 15, 2024 14:37 AEPA Operator: Shyla	AEPA was notified that the Scrubber 5 and Scrubber 6 stack heights do not meet the minimum required height above grade of 17.89 m, as per Table 4-1. As per the drawings, the stack heights are 17.826 m. Discrepancy was first noted during stack survey submitted in October. 7-day letter was submitted.	435266

Contraventions due to the exceedances of the Air Quality Monitoring Station listed in Table 14 can be referenced in the 2024 Annual Industrial Ambient Air Quality Monitoring Report submitted to AEPA on behalf of EPCOR by a third party consultant.

Table 17 summarizes the notifications to AEPA under Approval to Operate 639-03-07 as per the 2024 Operations Plan. There were 14 notifications in 2024.

Table 17: Summary of Notifications to AEPA

Date	Summary of Notifications	AEPA Reference Number
January 29, 2024 11:45 AEPA Operator: Dave	AEPA 24-hour hotline was notified of planned work on the UV control system from 7am to 2pm on Jan 31, 2024. The work is planned so no interruption to the UV process is anticipated, but this notification is being made as a precaution, as there is always a risk of impact to the UV process.	424440
February 5, 2024 10:30 AEPA Operator: Steven	AEPA was notified via the 24-hour hotline of an up to 6.5 hour outage of EPT Scrubber taking place 02/05/2024 at 10:30 am for maintenance. The scrubber is planned to be back online by 17:00 on 02/05/2024. Additional fence line monitoring for H2S will take place during the outage.	424672
Feb 9, 2024 9:45 AEPA Operator: Raymond	AEPA 24-hour hotline was notified of a planned UV outage starting at 11:00pm on Feb 14 until 11:00am on Feb 15, 2024 to support maintenance on the electrical system. Noted that UV outages are scheduled during low flow to minimize impact on downstream users and the environment.	424824
April 23, 2024 16:00 AEPA Operator Iona	AEPA 24 hour hotline was notified as a courtesy that as part of the project commissioning Gold Bar WWTP new scrubber #5 will start treating foul air starting on April 24, 2024, replacing Scrubber #3 (EPT Scrubber). All conditions of the approval to operate (i.e. daily average ORP and pH) of the new scrubber 5 are intended to be met, and if not, it will be reported to the 24 hour hotline as an approval violation with a 7 day letter report. No odour issues are anticipated.	427219
May 14, 2024 8:10 AEPA Operator: Darren	AEPA was notified via the 24-hour hotline of a planned outage of the screen building 2/3 carbon scrubber taking place 05/14/2024 at 8:30 am for media replacement. The scrubber is planned to be back online by 18:00 on 05/15/2024. Additional fence line monitoring for H2S will take place during the outage. **UPDATE: Work ended up getting cancelled. EPCOR called back at 923am 05/14/2024 to update AEPA to confirm work will be rescheduled. No scrubber outage took place.	427996
June 6, 2024 AEPA Operator: Natasha	AEPA 24-hour hotline was notified of a planned outage of the UV disinfection process 8:00am until 9:30 am on June 12, 2024 to support site wide transformer switching maintenance. Noted that UV outages are scheduled during low flow to minimize impact on downstream users and the environment. If there are elevated flows due to rainy weather this work will be rescheduled. AEPA was also notified of a planned outage of the Fermenter Odour Scrubber to take place from 8am-2pm on June 11, 2024 for planned equipment maintenance. Additional fenceline H2S monitoring will take place during the outage. **UPDATE: On June 12, 2024 at 10:20, AEPA 24-hour hotline was notified of a reschedule of the planned power outage of the UV disinfection process from 8:00am until 9:30 am on June 13, 2024 to support site wide transformer switching maintenance. Noted that UV outages are scheduled during low flow to minimize impact on downstream users and the environment. If there are elevated flows due to rainy weather this work will be rescheduled.	428864

Date	Summary of Notifications	AEPA Reference Number
June 17, 2024 14:50 AEPA Operator: Erin	AEPA was notified of a planned outage of the Fermenter Odour Scrubber to take place from 7am-3pm on June 19, 2024 for planned equipment maintenance. Additional fenceline H2S monitoring will take place during the outage.	429246
July 15, 2024 14:08 AEPA Operator: Erin	AEPA was notified of a planned outage of odour Scrubber 2 (West) and Scrubber 5 to take place from 7:30 AM - 2:00 PM on July 16, 2024 for planned equipment maintenance. Additional fenceline H2S monitoring will take place during the outage.	430424
September 4, 2024 12:27 AEPA Operator: Dave	AEPA was notified of a planned outage of the Screen 4-8 Carbon Scrubber taking place on September 5, 2024 from 07:30 to 16:30 to replace the media. Additional fenceline H2S monitoring will take place during the outage.	432577
October 2, 2024 09:47 AEPA Operator: Christopher	AEPA was notified that a commissioning test will be performed on Scrubbers 5 and 6 from October 3, 2024 19:00 to October 4, 2024 03:30. H2S will be brought on site and injected into the scrubbers at concentrations up to 50 ppm to test the designed capacity. We intend to meet all regulatory requirements and no additional odours are expected. H2S readings will be taken with our handheld meter during the test. Note this test was scheduled overnight to limit potential odour/disruption to the community.	433724
October 17, 2024 12:35 AEPA Operator: Darren	AEPA was notified of a variance from the primary treatment target operating capacity. The primary treatment capacity will be reduced from 1200 MLD to 900 MLD from October 19, 2024 to December 1, 2024, at which time the winter target operating capacities will come into effect. The purpose of the variance is to perform preventative maintenance on EPT clarifiers and to support the primary clarifier odour control improvement capital project.	434290
October 24, 2024 12:30 AEPA Operator: Rebekah	AEPA was notified that the ducting collecting foul air from the primary effluent channels was temporarily disconnected on July 8, 2024 to accommodate project work on the primary effluent channels. Foul air from the primary effluent channels is typically directed to Scrubber 1 (East Scrubber), as per our Operations Plan. The ducting is scheduled to be reconnected in June 2025.	434532
November 21, 2024 15:55 AEPA Operator: Taryn	AEPA was notified with an update to REF434290, a variance from the primary treatment target operating capacity. The primary treatment capacity will be further reduced from 900 MLD to 600 MLD from November 23, 2024 to February 14 2025, at which time it will return to the winter target operating capacity of 900 MLD. The purpose of the variance is to perform preventative maintenance on EPT clarifiers and to support the primary clarifier odour control improvement capital project. This work is done over winter months to minimize risk of wet weather flows.	434290
November 25, 2024 10:48 AEPA Operator: Christopher	AEPA was notified that Scrubber 1 (East Scrubber) will be shut down today (November 25, 2024) as there are currently no sources of foul air feeding this scrubber and the scrubber fan is at risk of freezing due to drawing in ambient air. We will notify AEPA when the scrubber is returned to service, if requested. Note that we will also not be reporting the daily average pH, ORP, H2S in, or H2S out for Scrubber 1 while it is offline. AEPA Operator requested follow-up with EPO to determine if 7-day letter is required. EPO confirmed no 7-day letter required. Additional info: As part of capital project work, Channel 1 (including Grit Tanks 1-3 and Primary Clarifiers 3-4) is offline and empty, and the ducting connecting the Primary Effluent channels is disconnected (previously notified under AEPA Ref #434532). Scrubber 1 will resume operation when Channel 1 and associated equipment goes back into service, which is expected to occur in Spring 2025.	435525

2024 Biosolids Program Summary

In 2024, the biosolids management program was able to remove 28,410 dry tonnes (DT) of biosolids from the Clover Bar Lagoons for beneficial reuse. Biosolids production from Gold Bar and Arrow Utilities (previously Alberta Capital Region Wastewater Commission) was 26,152 DT, which increased the storage inventory by 2,258 DT.

Table 18: Summary of Biosolids Program

Beneficial Application Use Method	Application Weight Removed from Lagoons (dry tonnes)	Application Volume (m^3)
Nutri-Gold (dewatered material)	9,600	41,715
Nutri-Gold (thickened material)	9,467	
Agricultural Land Application (3rd party)	9,343	144,168
Non-Agricultural Land Application	0	0
Total	28,410	332,666

Appendices G, H, and I contain summaries of the Nutri-Gold, third party agricultural, and non-agricultural land application programs, respectively.

Enhanced Primary Treatment (EPT) Usage					
Total Bypass (hr)	EPT Usage (hr)	% Usage	Total Bypass YTD (hr)	EPT Usage YTD (hr)	% Usage YTD
8	8	100%	14	14	100%

RAW — Untreated Influent into the plant
INF — Untreated wastewater from collection system
INFs — Influent, screened at the Headworks Diversion Structure
PE — Primary Effluent from conventional primaries
PE 30 — Primary Effluent from conventional primaries discharged via Outfall 30
EPT — Enhanced Primary Treatment
EPE — Enhanced Primary Effluent
EPEPS — Enhanced Primary Effluent Pump Station
FE — Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC — Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10 — UV-disinfected, discharged via OUTFALL 10
OUTFALL 20 — Combined Bypass (RAW + PE + EPE)
OUTFALL 30 — Combined Bypass (INF + INFS + PE30 + EPE)
MPW — Membrane Product Water (Effluent re-use water)
ML — Megalitre (1,000,000 Litre)
MPN — Most Probable Number
NR — No Result
NS — No Sample
INS — Insufficient Sample
AEP — Alberta Environment & Parks

Report Comments

1	Outfall 30 composite samples for March 15th, 2024 were collected in two carboys. Both samples were analyzed seperately for chemical parameters.
	The averages of the results were calculated and reported. All sampling and analysis requirements were met.

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
---	---
EPBPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC	Combined post-UV disinfection (FE+EPBPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.
FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Enhanced Primary Treatment (EPT) Usage

Total Bypass (hr)	EPT Usage (hr)	% Usage	Total Bypass YTD (hr)	EPT Usage YTD (hr)	% Usage YTD
99	99	100%	290	290	100%

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.
FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW	Untreated Influent into the plant
INF	Untreated wastewater from collection system
INFs	Influent, screened at the Headworks Diversion Structure
PE	Primary Effluent from conventional primaries
PE 30	Primary Effluent from conventional primaries discharged via Outfall 30
EPT	Enhanced Primary Treatment
EPE	Enhanced Primary Effluent
EPEPS	Enhanced Primary Effluent Pump Station
FE	Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.
FEC	Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10	UV-disinfected, discharged via OUTFALL 10
OUTFALL 20	Combined Bypass (RAW + PE + EPE)
OUTFALL 30	Combined Bypass (INF + INFS + PE30 + EPE)
MPW	Membrane Product Water (Effluent re-use water)
ML	Megalitre (1,000,000 Litre)
MPN	Most Probable Number
NR	No Result
NS	No Sample
INS	Insufficient Sample
AEP	Alberta Environment & Parks

Report Comments

AEP Ref #

RAW — Untreated Influent into the plant
INF — Untreated wastewater from collection system
INFs — Influent, screened at the Headworks Diversion Structure
PE — Primary Effluent from conventional primaries
PE 30 — Primary Effluent from conventional primaries discharged via Outfall 30
EPT — Enhanced Primary Treatment
EPE — Enhanced Primary Effluent
EPEPS — Enhanced Primary Effluent Pump Station
FE — Final Effluent from secondary treatment process (with biological nutrient removal). Pre-Ultraviolet disinfection.

FEC — Combined post-UV disinfection (FE+EPEPS)
OUTFALL 10 — UV-disinfected, discharged via OUTFALL 10
OUTFALL 20 — Combined Bypass (RAW + PE + EPE)
OUTFALL 30 — Combined Bypass (INF + INFS + PE30 + EPE)
MPW — Membrane Product Water (Effluent re-use water)
ML — Megalitre (1,000,000 Litre)
MPN — Most Probable Number
NR — No Result
NS — No Sample
INS — Insufficient Sample
AEP — Alberta Environment & Parks

Approval 639-03-07
Gold Bar Waste Water Treatment Plant Operations Monthly Summary

2024

SENIOR MANAGER, OPERATIONS MANAGER, OPERATIONS	• TRINA MANNING • ALLAN GORDON (LEVEL II)
LEVEL IV OPERATORS	• JANAKA LEKAMWASAM • MIKE NUNES • JODY PENNER • COLE BAKER • ANDREW NIEUWENHUIS • ISMAIL SANDOUGA • ARMEN OMERAGIC • ADAM KELLY • EMMA REES • JERMINE PAGLICAUAN • YUSUF JAMA • RYAN VOGELGESANG • DEREK HOLDEN

January

- 1 secondary bypass – Jan 30
- 4 Voltus shutdowns – Jan 12, 13, 14, & 18
- Opt out of Voltus from Jan 15 to 25 due to performance concerns
- 18 dead ducks found in secondaries/UV for Jan
- Ferm 1 TPS pump 28430 seal leaking – Jan 1
- Supernatant off due to low flow – Jan 1
- Sec 6, Cell 3 broken shear pin – Jan 1
- PE sampler not drawing samples – Jan 3
- EPT 11/12 drained and locked out – Jan 3
- West Scrubber recirc pump repaired – Jan 5
- Instrument air compressor GTC 15204 failed – Jan 5
- Outfall 30 low temp alarm – heater set up – Jan 7
- Sec 1, Cell 4 broken shear pin – Jan 7
- Prim 10 west drive broken shear pin – Jan 7

- Grit Tank 7 incline auger has a leak – Jan 8
- UV Channel 3 drain valve leaking – changed to lag 3 – Jan 10
- GRF locked out – Jan 10
- Ferm 4 TPS pump 28645 oil hose fell off – Jan 10
- Outfall 10 flow meter replaced – Jan 10
- Sec 3, Cell 2 broken shear pin – Jan 11
- PE sampler fridge failed – Jan 11
- Labatts called to report a spill of liquid with a pH of 5.88 – total volume 10.42 cubic meters – Jan 11
- East Scrubber level transmitter failed – Jan 12
- Membrane center feed pump leaking oil (lag 2) – Jan 12
- UV Channel 4 unhealthy bank alarm – Channel 3 now lag 2 – Jan 13
- North and south poly mixing systems issues – north no water and south is plugged – Jan 13
- West Scrubber filters plugged – bypassed – Jan 14
- InDense sprayers frozen – Jan 15
- Lag has broken hot water line – Jan 16
- South poly system mixing pot broken – Jan 17
- Membrane day bleach tank leaking at bottom – Jan 18
- Sec 2, Cell 5 broken flight – Jan 21
- Scum tank 5 level indicator issues – Jan 20
- Ferm 3 scum tank level transmitter failure – Jan 23
- Odour complaint – Jan 24
- Sec 2, Cell 1 broken shear pin – Jan 25
- Prim 8 east pass broken shear pin – Jan 25
- Product water pump 45357 check valve passing (lead) – Jan 27
- Dig 7 influent flow meter blown fuse – Jan 28
- UV main sampler stopped sampling – Jan 28
- Ferm 1/2 scum tank level indicator 3650 bad PV – Jan 29
- EPT poly in auto for bypass – in cascade the program shut down – Jan 30
- DAF 1 broken shear pin – Jan 30
- Membrane sampler not drawing samples – Jan 31
- Membrane plant tripping off due to low contact tank levels – Jan 31
- Recovery cleans started for all membrane tanks – Jan 31
- Quills cleaned at membrane plant – Jan 31

February

- 1 secondary bypass – Feb 11-12
- 2 Voltus shutdowns – Feb 2 and 29
- 5 dead ducks found in secondaries/UV for Feb
- Membrane recovery cleans started again due to low permeability – Feb 1
- Product water pump 45348 check valve failed – Feb 1
- Grit Tank 4 back to Ops and filling – Feb 2
- DAF 6 poly pump failed – Feb
- Prim 8 cross collector broken shear pin – Feb 4
- Grit Tank 4 back in full service – Feb 5
- Membrane west sample pump failed – Feb 5
- Labatts called about caustic spill pH of 11.5 – 57.67 cubic meters – Feb 6

- Grit Tank 7 O/S and dewatered for inspection – Feb 7
- Sec 4, Cell 4 broken shear pin – Feb 7
- Filling EPT 11/12 with FE – Feb 8
- EPT 10 west drive broken shear pin – Feb 11
- EPT 12 cross collector broken shear pin – Feb 11
- UV Channel 4 relamp started – Feb 12
- EPT 11/12 in full service – Feb 12
- EPT 9/10 O/S and thinning – Feb 12
- UV outage 11:00 pm to 4:30 a.m. for breaker replacement – Feb 14-15
- EPT 11 broken shear pin – Feb 15
- Sec 11, Cell 2 scum actuator failed – Feb 16
- EPT 9/10 draining for cleaning/inspection – Feb 17
- EPT 12 broken shear pin – Feb 17
- Prim 6 scum tank discharge line plugged – Feb 18
- Dig 2 recirculation pump keeps tripping – Feb 17 – Overload replaced – Feb 21
- Grit Tank 6 incline auger has a hole on the underside of trough – Feb 21
- Ferm bleach pump 65314 tube failure – Feb 21
- Broken shear pin Prim 8 – Feb 21
- EPCOR Compliance called to report a 25 L gasoline spill – Feb 23
- Sec 2, Cell 5 scum trough failed – Feb 24
- Broken FE line by Sec 3 – Feb 26
- Prim 8 scum line plugged – Feb 26
- Bio 8, Cell 3 air flow meter not reading – Feb 26
- South poly screw feeder will not run – Feb 27
- Boiler 7 stack cover falling off – Feb 27
- UV Channel 1 bulb replacement started – Feb 27
- Membrane back pulse valve leaking air – shut down plant a few times – Feb 28
- UV Channel 1 bulb replacement complete – ready for service – Feb 29
- Membrane plant shutdown for 2 hours to replace back pulse valve actuator – Feb 29
- Glycol air relief valve leaking from roof of west scrubber onto road way – isolated and cleaned up – Feb 29
- Small glycol leak in gas room 1 from air relief valve by K102 – Feb 29

March

- 2 Voltus shutdowns – Mar 9 & 10
- 8 secondary bypass events – Mar 10-11, 11-12,12-13, 13-14, 14-15, 15-16, 16-17, & 17-18
- 2 dead ducks
- Membrane transfer bleach line A repaired – ready to use – Mar 4
- Prim scum tanks 6/8 back in service after discharge lined cleaned – Mar 5
- Grit Tank 7 back in service after inspection/repair – Mar 6
- Prim 6 broken shear pin cross collector – Mar 7
- EPT 12 cross collector broken shear pin – Mar 8
- Testing Bio 4 in spring mode – Mar 8
- Broken shear pin Prim 8 cross collector – Mar 8
- Blower 6 tripped on surge alarm due to element alarm – Mar 10
- Grit Tank 5 pre-screen scraper bars misaligned due to rope coming in – Mar 11

- Grit Tank 5 isolated/drained for pre-screen repair – Mar 11
- Blower 6 available again after temp element reset by E/I – Mar 11
- Ferm 1 TPS pump 28432 broken shear pin – Mar 12
- Grit Tank 5 back in service after pre-screen repair – Mar 13
- Prim 8 cross collector broken shear pin – Mar 15
- EPT 12 east sludge collector drive broken shear pin – Mar 16
- Sec 4, Cell 3 collector chain fell off of sprocket – dewatering for repair – Mar 18
- Sec 6 waste pump replacement – Mar 19
- Prim 8 scum tank plugged – Mar 21
- Ferm 1 TPS pump 28430 pillow block bearing cracked – O/S – Mar 21
- Sec 4 filling after repair – Mar 22
- Sec 4 back in full service – Mar 24
- Sec 2 clarifier blanket lifting – Mar 23 & 24
- Scum tank Prim 6/8 cleaning started – Mar 25
- Boiler House 2 south expansion tank isolated for bladder replacement – Mar 25
- Chemscan 1174 nitrate readings O/S until software upgrade happens – Mar 26
- EPT 12 cross collector broken shear pin – Mar 26
- West Scrubber offline (4 hrs) for bleach pump vent repair – Mar 27
- EPT 12 broken shear pin – Mar 29

April

- 2 Secondary Bypass Events – Apr 5 & 30
- Voltus shutdown – Apr 22
- Grit Tank 6 O/S for cleaning/inspection – Apr 1
- Grit Tank 3 dewatered for Screen 3 chain replacement – Apr 2
- Grit Tank/Screen 2 back in service after screen chain replacement – Apr 3
- TWAS pump 1 O/S for replacement – Apr 4
- EPT 12 broken shear pin – Apr 4
- Sec 2 clarifier lifting – InDense tank – increased RAS – Apr 8
- Sec 2, Cell 2 broken shear pin – Apr 8
- EPT poly pump 66459 tube replaced – Apr 8
- West biogas line to flare purged and isolated for projects – Apr 11
- EPT 9/10 full and back in service – Apr 12
- Dewatered Prim 7/8 for cleaning/inspection – Apr 13
- Prim 6 cross collector broken shear pin – Apr 13
- Blown rupture disc on north heat exchanger in the blend tank area – switched to south – Apr 14
- Ferm 1 TPS pump 28430 broken positioner – Apr 14
- Prim 5 west pass broken shear pin – Apr 15
- Ferm Scrubber north bleach pump tube failure – Apr 16
- Sec 11 broken shear pin – Apr 16
- EPT 12 cross collector broken shear pin – Apr 18
- Grit Tank 5 pre-screen scraper assembly broke – Apr 19
- EPT 9 west collector drive broken shear pin – Apr 21
- Blower 1 & 4 tripped – Apr 22
- Grit Tank 4 dewatered 4 feet to inspect incline auger – back in service same day – Apr 22
- Clean of the Primary Scum system completed – back into service Apr 23

- Blower 1 & 4 DeltaV card replaced – Blowers 1 & 4 available – Apr 23
- Ferm Scrubber bleach pump 65314 roller failure – Apr 23
- Bio 5 air line leak – bio isolated to repair air line – Apr 23 – Secondary 5 back in service Apr 29
- Scrubber 5 commissioning started – EPT scrubber off line – Apr 24
- EPT 12 cross collector broken shear pin – Apr 24
- Grit Tank 5 dewatered for pre-screen repair – Apr 29
- Scrubber 5 commissioning complete – Apr 30
- Scrubber 6 commissioning started – Apr 30
- Prim 6 cross collector drive shaft not moving – Apr 30
- 2024 Operations Plan submitted to AEPA – Apr 30

May

- Biosolid truck spill on 88 Ave and Highway 15 – May 4
- Voltus outage – May 2, 23, 25, 29 & 30
- 6 Sec Bypass Events – May 1, 6-8, 16, 19, 22-23 & 26-27
- Dead ducks – 1
- EPT poly system plugged – May 1
- Prim 8 west pass broken shear pin – May 4
- Prim 7/8 back in service – May 4
- Prim 5/6 O/S for inspection – May 5
- EPT 11 west pass broken shear pin – May 5
- Ferm Scrubber bleach pump 65314 failed on overcurrent – May 7
- Ferm Scrubber bleach pump 65313 tube failure – May 7
- Prim 7 collector drive broken chain – May 7
- Prim 8 west pass broken shear pin – May 7
- Low permeability on all membrane trains – hypo cleans started
- EPT 11 broken shear pin – May 12
- Prim 8 broken shear pin – May 12
- North blend tank heat exchanger rupture disc failed – May 13
- EPT 9 broken shear pin - May 14
- Sec 9 cross collector broken shear pin – May 14
- Sec 2, Cell 3 broken shear pin – May 16
- Sec 6 cross collector broken shear pin – May 18
- Prim 5/6 back in service – May 18
- Draining Prim 8 for repair – May 20
- Sec 10, Cell 5 broken shear pin – May 20
- Prim 7/8 scum tanks cleaned by Canessco – May 21
- Sec 8, Cell 5 broken shear pin – May 21
- Citric cleans started in membrane – May 22
- Ferm Scrubber bleach pump 65314 tube failure – May 25
- Prim 8 cross collector broken shear pin – May 25
- Sec 1, Cell 4 broken shear pin – May 25
- Prim 4 broken shear pin – May 25
- Ferm Scrubber bleach pump 65313 failed – May 27
- Sec 9 cross collector broken shear pin – May 28
- Sec 5 equalization valve replaced – May 29
- RAS 1 pin hole leaks temporary repair complete – May 29

- Filling prim 8 with F.E. – May 29
- Prim 5 broken shear pin – long pass – May 29
- Labatts reported spill of 14 cubic meters of liquid with a pH of 5.8 – May 29
- Prim 8 broken shear pin – May 29
- Phosphate spike the evening of May 30
- Prim 5, Cell 1/2 & Prim 8, Cell 3/4 broken shear pins – May 31

June

- 9 Secondary Bypass Events – June 3-5, 8, 11-12, 12-13, 14, 17,, 23-24, 27th & June 30th – July 1st.
- Voltus outage – June 12, 18, & 23
- EPT roof leaking – June 3
- Bio 1 RAS discharge line leaking/ temp repair complete – June 5
- Hot water cleaning scum tanks 5 thru 8 before boiler house 1 shutdown – June 10
- Ostara feed pump tripped – June 9 & 12
- Bio 4 back in service – June 12
- Solids shutdown to prepare for power outage – June 11
- Prim 5 broken shear pin cross collector – June 12
- EPT 11 broken shear pin – June 12
- Sec 8, Cell 2 broken shear pin – June 12
- Ferm Scrubber caustic pump 65322 tube leaking – June 13
- Ferm 4 level transmitter failed – June 13
- Membrane chlorine dosing pump 26627 union leaking – O/S – June 13
- Planned power outage complete – June 13
- Prim 5 scum tank level indicator faulty – June 14
- Ferm Scrubber bleach pump 65313 tube failure – June 13
- Membrane conductivity meter faulty – June 13
- Broken shear pin Sec 10, Cell 3 – June 15
- Starting 2 hypo & 2 citric cleans for Train 3 to see how permeability responds – June 15
- Prim 7 cross collector broken shear pin – June 16
- Prim 5 broken shear pin – June 16
- Bio/Sec 6 O/S for inspection & air line repair – June 17
- Boiler house 1 O/S for summer – June 17
- East & Fermenter scrubber off line due to planned power outage (8 hrs) – June 19th.
- EPT 12 broken shear pin – blanket 0.61m – June 20
- Prim 5 broken shear pin – June 20
- New PE sampler not counting on DeltaV – June 21
- WAS 11 VFD failure – temp VFD setup – June 22
- Sec 9 cross collector broken shear pin – blanket 4.5 ft – June 22
- Sec 3 broken shear pin – June 25
- Membrane train 3 – 2 hypo and 1 citric cleans complete – June 25
- Prim 5 west pass broken shaer pin – 0.15 M blanket – June 28
- Outfall 20 sump alarming periodically – June 29

- Sec 8 – cell 5 broken shaer pin – June 30
- Bio 6 draining complete for inspection – June 30

July

- Bypass Events – July 1, 3-4, 25, 26, 27
- Voltus outage – July 4, 8, 9
- EPT 12 east collector broken shear pin – July 1
- Heating pump 7 (Boiler House 1) leaking seal – July 2
- EPT 11 cross collector broken shear pin – July 3
- Prim 6 cross collector broken shear pin – July 4
- UV design dose changed from 21 to 23 to troubleshoot ecoli values – July 5th.
- Prim 7 scum collector tripped on phase loss – July 6th.
- Sec 1 RAS discharge line temp repair is leaking a lot – July 6th.
- Sec 5 RAS pump has a pin hole leak on volute – July 7th.
- Grit tank 4 pre-screen incline auger guide wheel came off of bearing – July 7th.
- Scrubber 5 bleach pump 74385 has a leak at the check valve – July 8th.
- Started draining bio 1 to replace RAS 1 discharge spool piece – July 8th.
- EPCOR drainage reported a hydraulic spill of 2 to 3 Litres – July 9th.
- East liquid ring compressor has a broken steel plate – O/S – July 9th.
- RAS 1 dischrage piping repair complete – July 9th.
- Prim 5 west cell broken shear pin July 9th.
- Sec/Bio 1 back in service – July 10th.
- Backup RAW sampler faulted a few times, over sampling at times – July 11th.
- EPT 12 broken shear pin – 2 ft blanket – July 11th.
- Broken shear pin sec 10 – cell 3 – blanket 5 ft – July 11th.
- Ferm caustic pump 65322 pin hole leak on suction – July 11th.
- EPT 11 cross collector broken shear pin – July 11th.
- Raw backup sampler not advancing to next bottle - July 12th.
- Sec 9 cell 2 broken shear pin – blanket 4 ft – July 16th.
- Scrubber 5/6 now running together – west scrubber now off line – July 16th.
- Sec 6 back in full service – July 19th.
- DAF 2 recycle pump seal leaking – July 20th
- Sec 7 clarifier O/S and draining for inspection – July 22nd.
- Fire alarm in Ops Center: False alarm- smoke detector issue – July 23
- EPT 11 cross collector shear pin break – July 24
- Roof leak in lab – July 26
- Sec 8 broken shear pin – July 28
- EPT 9 collector shear pin break – blanket 1 ft- July 26
- EPT 9 drive shear pin break – July 31

August

- 8 Bypass Events Aug 4th–5th, 13th, 15th-16th, 19th, 24th, 24th-25th, 27th, 28th,
- EPT 11 shear pin break – Aug 1
- Primary 5 broken shear pin (2x) – Aug 2
- Secondary 7 back into service – August 2
- Secondary 1 out for planned RAS pump and piping replacement – Aug 3
- Bio 10 Cell 5 air valve stuck open – Aug 3
- Sec 6 croll shear pin break – Aug 4
- Issue with diversionstructure level sensors, EI called in to clean – Aug 5
- Grit 6 incline auger jammed – Aug 5
- Sec 10 Cross Shear Pin Break – Aug 5
- Outfall 30 short term sampler – temp too cold. – Aug 5
- RAS 4 flow seems to be limited to 30 MLD – Aug 5
- Sec 1 O/S, drained for inspection and bio flow meter replacement – Aug 6th.
- Leak on DAF WAS line – repaired – Aug 6th.
- Bio gas leak - dig square 1 to basement blower/boiler room 1 – Aug 8th.
- Sec 4 cell 4 broken shear pin – Aug 9th.
- EPT 11 cross collector broken shear pin – Aug 9th.
- Sec 10 cell 1scum trough actuator failed – Aug 10th.
- Sec 9 northe west pass boken shear piun – Aug 11th.
- RAS 2 discharge pipe pin hole leak/repaired – Aug 13th.
- Citric quill cleaned – Aug 14th
- PE channel flume installed – Aug 15th.
- Bio 1 filled with FE to just above diffusers – Aug 16th
- Sec 9 cell 2 broken shear pin – Aug 17th.
- Prim 5 east pass broken shear pin – blanket 0.33 M – Aug 18th.
- Sec 10 cell 3 broken shear pin – blanket 5 ft – Aug 18th.
- Citric cleans started on membranes – Aug 19th.
- PE channel flume pulled out of PE channel – gasket leaking – Aug 20th.
- Sec 6 cross collector broken shear pin _ aug 21st.
- Ferm bleach pump 65313 tube failure – Aug 22nd.
- Maintenance cleans started on all trains – bleach pumping issue noticed – Aug 22nd.
- EPT 10 cross collector broken shear pin – Aug 22nd.
- Prim 5 west collector drive broken shear pin – Aug 23rd.
- APG pipe failure berm of cell 5 – contained – Aug 24th.
- Sec 9 cell 2 broken shear pin – blanket 2 ft – Aug 25th.
- Sec 6 cell 1 broken shear pin – blanket 3 ft – Aug 25th.
- Diversion structure level indicator 2775B dropping to zero – Aug 27th.

September

- 6 Secondary Bypass Events – Sept 2nd-3rd, 12th, 14th-15th, 15th, 22nd & 26th.
- Voltus outage – Sept 19th & 26th.
- Dead beaver found in UV screens – Sept 16th.
- Ferm 1 O/S – Sept 3rd.
- Dig 7 foam control pump repaired – Sepr 4th.
- Ferm 3 sludge blanket level indicator showing fault – Sepr 4th.
- Sec 7 – cell 2 broken shear pin – Sept 6th.

- Membrane bleach dosing pump 26628 discharge leaning – Sept 8th.
- Draining prim ¾ - Sept 8th.
- GRF carbon scrubber back in service – Sept 8th.
- Sec 6 & 7 scum troughs stuck forward – Sept 8th.
- Membrane bleach doing pump 26627 leaking from suction side of pump – Sept 9th.
- North flame arrestor cleaned – Sept 10th.
- Solids shutdown – Sept 10th.
- %6 WAS pump replaced – Sept 12th.
- Draining sec/bio 5 for inspection and RAS replacement – Sept 14th.
- Dig 6 heat exchanger high pressure wash complete – Sept 16th.
- Diversion structure screen 31710 hydraulic leak - Sept 16th.
- Sec 2 – cell 3 broken shear pin – Sept 18th.
- Ferm scrubber bleach pump tube failure – Sept 19th
- Grit tank 7 incline auger VFD replacement complete – Sept 19th.
- Prim 5/6 density meter reading 0% - Sept 22nd
- RAS 3 volute leaking on the suction side (hole in the bottom of the volute) Sept 23rd.
- Filling bio/sec 5 – Sept 23rd, bio/sec 5 back in service – Sept 25th.
- Membrane plant shutdown for maintenance work – Sept 23rd.
- Broken flight sec 4 – cell 5 – removed – Sept 23rd.
- Boiler started in boiler house 1 for plant heating – Sept 24th.
- Ferm ½ scum tank discharge line has a blockage – Sept 25th.
- Membrane plant start up – Sept 26th
- Bios 2-5 influent pumps cavitating due to hydraulic bottleneck - Sept 26th
- East scrubber sump LT not reading correctly, submersible with float dropped in - Sept 26th
- Secondary Bypass – Sept. 26th
- Voltus – Sept. 26th
- Voltus – Sept. 28th
- Secondary 10 shear pin - Sept 28th
- Membrane having issue maintaining levels - Sept 28th
- Chemscan 1173 not reading correctly - Sept 29th
- Secondary 9 shear pin - Sept 29th
- Voltus – Sept. 29th

October

- 1 Sec Bypass Event – Oct 20th,
- 4 Voltus outages – Oct 8th,, 15th, 22nd & 29th.
- Sec 11 dewatering for inspection – Oct 1st.
- Testing high pressure bio gas line from chiller room to boler house 1 – Oct 1st.
- Sec 11 back in service due to hydraulic restraints on PE chanel level (north) – Oct 2nd.
- Membrane bleach pump 26628 suction valve leaking – Oct 4th.
- Broken shear pin sec 4 – cell 4 – Oct 5th.
- Bio 8 and 9 influent pumps replaced – Oct 5th.
- Broken shear pin sec 4 – cell 5 – Oct 5th.
- Influent channel flow meter flow dropping out during peak flow periods – Oct 6th.
- Membrane center strainer cleaned out – Oct 7th.

- Thinning out bio/sec 4 for inspection and flight repair – Oct 8th.
- Bio 6 influent pump replaced (faulty pump) – Oct 9th.
- Thinning out EPT 9/10 to prepare for draining and inspection – Oct 10th.
- Bio gas leaking from gas valve located in chiller room/isolated – Oct 11th.
- Dewatered sec/bio 4 to replace flight in clarifier – Oct 13th. – unplanned outage broken flight.
- Broken shear pin sec 6 – cross collector – Oct 13th.
- Sec 4 back in service after flight replacement – Oct 16th.
- Solids shutdown and draining blend tanks – Oct 16th.
- North blend tank O/S for contractor work – Oct 16th.
- Broken shear pin – prim 6 cross collector – blanket 0.5 ft – Oct 17th.
- DAF 1 back inservcie after pressure tank repair – Oct 17th
- Dewatered DAF 2 for pressure tank repair – Oct 18th.
- Labatts called about a spill of caustic solution – pH of 5.7 – 2.4 cubci meters released – Oct 18th.
- Broken shear pin EPT 10 – west collector drive – Oct 18th.
- EPT 9/10 deawtering stared for yearly inspection – Oct 19th.
- Broken shear pin – sec 3 – cell 5 – Oct 19th.
- Dewatering bio/sec 3 for inspection - Oct 20th. – unplanned outage RAS volute failure.
- Labatt called to report spill – 7.2 cubic meters caustic – pH of 11.5-12.7 range – Oct 20th,
- East scrubber sump pump falied – Oct 21st.
- Running fem scrubber in AI control – Oct 22nd.
- Broken shear pin sec 10 – cell 3 – Oct 23rd.
- Filling sec/bio 1 – Oct 25th.
- 2 broken shear pin sec 1 – Oct 26th.
- Sec/bio 1 back in full service – Oct 26th.
- Boiler house 2 shutdown for natural gas connections – Oct 28th.
- Bio 11 – cell 3 mixer tripped onoverload – Oct 29th.
- Boiler house 2 back in service after natural gas conections complete – Oct 29th.
- Brken shear pin sec 4 – cell ? – Oct 29th.
- Sec 7 waste pump coupling failed – replaced – Oct 29th.
- East primary influent channel flow meter failed – Oct 29th.
- Filling sec/bio 3 to have ready for service –Oct 31st.
- Dig 8 gas space level indicator bouncing around – needs to be cleaned. – Oct 31st.

November

- Sec Bypass Events – 0
- Voltus outages – Nov 8th, 27th. & 30th
- Dead Duck Count – 4
- Prim 5 broken shear pin – Nov 1st.
- Sec 8 – cell 3 broken shear pin – Nov 1st.
- Sec 3 back in service after RAS volute replacement and clarifier inspection – Nov 2nd.
- Prim 5 scum tank level indicator failed – Nov 2nd.
- PE chanel level indicator LIT 4174 replaced – Nov 4th.

- Grit tank 5 dewatered and isolated for incline auger replacement – Nov 5th.
- EPT 12 broken shear pin – Nov 7th.
- DAF 2 back in service after pressure tank repair – Nov 7th.
- West primary influent channel flow meter failed FI-2826 – Nov 8th.
- EPT 9/10 back in service after inspection – Nov 8th.
- Sec 6 cross collector broken shear pin – Nov 9th.
- Draining prim 5/6 for project work – Nov 10th.
- Sec 6 – cell ½ broken scum trough mount – Nov 11th.
- East scrubber bleach pump tube failure – Nov 12th.
- Realigning membrane cassettes, add cassettes to train 8 week of – Nov 12th.
- EPT 11 west flights broken shear pin – Nov 14th.
- PE chanel LIT 4174 dropping out again – using 4713 for pump control – Nov 14th.
- DAF poly pump 2 leaking at seal – Nov 14th.
- Delta V loss of power alarms coming in – troubleshooting in progress – looks like Delta V cabinet in EPT chemical room is causing the alarm, backup power supply to all Delta V cabinets – Nov 15th.
- Influent channel 2 gate MOG 0102 device card failed – postion of gate showing 0%, simuted open so that we get a flow reading for channel 2 – Nov 18th.
- Boiler 2 tripping on flame failure – Nov 19th.
- Solids shutdown to prepare for electrical panel outage – running north flare in manual during outage – Nov 20th.
- Sec 6 cross collector broken shear pin – Nov 20th.
- Sec 4 cross collector broken shear pin – Nov 20th.
- East scrubber recirc flow dropping off – Nov 21st
- Supernatant pumps off – low flow – Nov 22nd.
- Dewatering EPT 11/12 – Nov 22nd.
- EPT 1/12 empty and locked out for inspection – Nov 24th.
- Channel 2 level transmitter bouncing around (flow going to zero) – Nov 24th.
- Shut off east scrubber fan due to ice build up in fan, low air suction temp – recirc pump still running – Nov 24th.
- Broke shear pin sec 4 – cell 4 – 5 ft blanket – Nov 27th.
- Broken weir in EPT 12, noticed during cleaning – Nov 27th.
- EPT 9 broken shear pin – Nov 27th
- Membrane train 1 aeration valve failed – shuts of train – Nov 28th
- Strathcona and waste discharge redirected to influent channel 3 – Nov 28th
- Sec 4 cross collector broken shear pin – Nov 29th.
- Voltus outage – Nov 30th.
- Grit tank 7 incline auger has multiple leaks.

December

- secondary bypass events – Dec 3, 7,8
- Grit tank 7 back in service - December 2 –
- Sec 6 cross collector shear pin broken - December 4
- Screen 8 VFD tripping – Dec 4
- Sec 1 Cell 5 Shear Pin Break – Dec 6
- Sec 4 cell 3 Shear Pin Break – Dec 6
- Sec 1 Cell 5 Shear Pin Break – Dec 6
- Fermenter scrubber bleach pump tube failures – Dec 7

- Sec 4 cell 3 Shear pin break – Dec 9
- EPT Ploy Pump Tube Failure – Dec 9
- Sec 1 cell 1 shear pin break – Dec 11
- Screen 8 VFD tripping – Dec 11
- NG line pressure testing in boiler house 2- Dec 11
- DAF 2 poly pump tripping – Dec 11
- Sec 4 cell 4 broken shear pin – Dec 14
- Secondary 9 Cell 2 broken shear pin – Dec 15
- Bio 5 cell 8 mixer fail to start – Dec 15
- DAF 6 taken out of service – Dec 15
- Lagoon supernatant return back on – 2.0 MLD- Dec 16
- Sec 4 cross collector shear pin – Dec 16
- Instrument Air compressor commication module error – Dec 17
- Gas Compressor K102 back in service - Dec 18
- DAF 6 back into service – Dec 20
- Sec 10 and 11 cell 3 shearping break – Dec 22
- Screen 8 back in service – Dec 23
- Sec 7 cell 4 Shear pin break – Dec 24
- Sec 4 cell 9 shear pin break – Dec 24
- Sec 10 cell 3 shear pin break – Dec 26
- Sec 6 cross collector shear pin break – Dec 26
- Sec 2 RAS pump making noise, then cleared itself – Dec 27
- Sec 4 cell 2 – Broken shear pin – Dec 28
- Sec 4 cell5 scum trough stuck in forward position – Dec 28
- Pri 8 Cross shear pin break – Dec 30
- Secondary 8 cell 5 shear pin break – Dec 31

Appendix F – Odour Complaints

Appendix F – Odour Complaints

Date	Time	Loacation	Complaint Description	Call Back Details	Wind Direction	Scrubber Status	Maintenance Activities	Action Taken	Is GBWWTP the Likely Source (Y/N)	Consistent with EnviroSuite Model
8/30/2024		4407 109 Ave	Details of customer odour complaint: Smells very strong Odour inside or outside Outside Description of odour: Sewage Odour intensity (scale from 1-10): 10 Time noticed odour and for how long: Starting Aug 28 till Aug 30 Is it a reoccurring issue? Yes	Called customer back on August 30 at 09:20. Customer noticed odour in the past couple days, but last night, it was especially bad, so they called in to report it. Let the customer know we have a bioreactor tank down for maintenance right now and we believe that is the source of the odour. Noted we also observed H2S at the AQMS last night around 7-8 PM, but it has otherwise been low. Also noted there was a shift in wind direction on Aug 27 which likely did not help. Let the customer know we will look into adding a water cap to the tank to try and reduce odour and that the tank will be returned to service in ~2 weeks. (Customer just moved back into the area after being away for a few years and asked her neighbours if the odours are still bad and they said it is getting better and only bad about 2x per year. Customer also noted they don't like the perfume smell (from odour mister)).	N/A	Operational	Bioreactor 1	Scaffolding was taken out of the tank earlier this week, but no FE was added. Looking to add water cap to tank to prevent odours.	Y	Y
1/24/2024	14:25	5304 Ada Blvd	Voicemail recieved through Water Canada Projects noting smell is really bad today and requesting someone to look into it.	Gold Bar Operations called customer back to get more information. Customer described that they had previously had issues with collection system odour.	S	Operational	N/A	Unable to identify any causes from GB. Forwarded to Wastewater Collection Network Operations who went out and plugged some manholes that were emitting odour.	N	N/A

Subject: 2024 Summary Report on Dewatered Biosolids Application to Marginal Lands within Strathcona County (Authorization No. 639-32733-SLU) and within Sturgeon County (Authorization No. 639-32787-SLU)

1.0 INTRODUCTION

Tetra Tech Canada Inc. (Tetra Tech) was retained by Olstad & Company Ltd. (Olstad & Company) and EPCOR Water Services Inc. (EPCOR) to prepare the 2024 Summary Report for Dewatered Biosolids Application to Marginal Land. Biosolids application was completed in 2023 in general accordance with the Alberta Environment and Protected Areas (EPA, formerly Alberta Environment [AENV]) 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands (the Guidelines)[1] as a beneficial, non-agricultural use of biosolids.

The 2024 Summary Report provides an update to the 2023 Summary Report[2] and includes post-application metals sampling data and monitoring results (Section 6.0) for Alberta Tier 1 metals as required in the authorizations.

Olstad & Company applied dewatered biosolids to two areas in 2023. The first area included one field located in Strathcona County near Josephburg, AB comprising approximately 71.4 hectares (ha) of land across two quarter sections (Figure 1). The second area included three fields in Sturgeon County near Gibbons, AB comprising approximately 120 ha of land within three quarter sections (Figures 2, 3, and 4). The fields were considered marginal lands as they are generally lower producing (due the lower soil pH).

The objective was to maximize the organic matter application from biosolids in an effort to increase the organic matter content of the soil without exceeding the maximum allowable nitrogen application rates. The increased soil organic matter content is expected to:

- Improve soil health through increased soil tilth and increased soil moisture holding capacity.
- Improve productivity through the application of crop nutrients in an environmentally sound manner.
- Improve productivity through increased crop response to chemical fertilizers in the future.

In an effort to increase the organic matter content of the soil, the biosolids application rate was limited by the volume of available biosolids and/or the maximum allowable nitrogen application rate (the most limiting of either total or ammonium nitrogen based on the dewatered biosolids analytical data) rather than the total solids content.

2.0 REGULATORY APPROVALS

On behalf of Olstad & Company and EPCOR, Tetra Tech prepared Applications[3,4] to EPA for Authorization to surface apply and incorporate Dewatered Biosolids (anaerobically digested sludge) from EPCOR's Clover Bar lagoons. Separate Letters of Authorization were sought for this project because the marginal lands were not eligible for inclusion under the normal Notification process described in section 4.6 of EPCOR Wastewater Approval No. 639-03-06. The marginal lands had a 0-30 centimetre (cm) average pH value less than 6.0, and as such, fell outside of the standard definition of agricultural lands as defined in the Guidelines and the permitted variance which allows application of biosolids to lands with a pH of 6.0 and higher[5].

On June 16, 2023, EPCOR submitted a Biosolids Stockpile Notification letter to EPA notifying the Director that, in accordance with section 4.6 of Environmental Protection and Enhancement Act (EPEA) Approval 639-03-06, EPCOR planned to stockpile municipal biosolids at SW 23-55-23 W4M within Sturgeon County. Due to crop logistics and landowner request, the stockpiling location was changed to the NW 14-55-23 W4M.

On September 6, 2023, EPCOR submitted a Biosolids Stockpile Notification letter to EPA, notifying the Director that, in accordance with section 4.6 of EPEA Approval 639-03-06, EPCOR planned to stockpile municipal biosolids at SE 07-54-21 W4M within Strathcona County.

On October 16, 2023, EPCOR received Authorization No. 639-32733-SLU to apply wastewater biosolids to the following quarter sections in Strathcona County:

- NW 07-54-21 W4M
- SW 07-54-21 W4M
- SE 07-54-21 W4M

On October 18, 2023, EPCOR received Authorization No. 639-32787-SLU to apply wastewater biosolids to the following quarter sections in Sturgeon County:

- NW 02-55-23 W4M
- SW 11-55-23 W4M
- NW 14-55-23 W4M
- NE 14-55-23 W4M
- SW 23-55-23 W4M

Stockpiling Notification letters and Application Authorization letters are attached in Appendix B.

[4] Tetra Tech Canada Inc. September 2023. Application for Authorization to Apply Dewatered Biosolids to Marginal Lands within Strathcona County, Alberta. File: ENW.BIOS03089-01. Application No. 639-32733-SLU.

[5] Patterson, S. (Science and Technology Specialist, EPA). 2023. Email communication: Guideline variance for land applying biosolids to fields with a pH of 6.0 or greater – Revision. January 31, 2023.

3.0 APPROVAL CONDITIONS

The following approval conditions for both Authorization No. 639-32733-SLU and Authorization No. 639-32787-SLU were adhered to during completion of the 2023 dewatered biosolids application to marginal lands:

- All dewatered biosolids were stockpiled in accordance with the Alberta Environment and Parks Draft Dewatered Biosolids Stockpiling Guidelines for stockpiles to be used within nine months of placement.
  - All stockpiles were placed on snow free ground.
  - All stockpiles were located outside of areas with standing water or depressional areas.
  - Permission letters were obtained from the landowners authorizing biosolids stockpiling on their property.
  - Dewatered biosolids stockpiles were located in a cultivated field with no exposure to domestic animals.
  - All buffer distances were maintained between the dewatered biosolids stockpiles and the features listed in the draft guidelines.
- Biosolids were applied in accordance with the Guidelines.
- Dewatered biosolids were cultivated into the soil the same day of application, or within 24 hours of application.
- No biosolids were applied to frozen or snow-covered ground (Photo 4).
- No parcels of land that received biosolids in 2023 had received biosolids within the previous three years.
- Olstad & Company only used agricultural equipment (Photos 1, 2, and 3) to spread biosolids, and therefore was not required to obtain written approval from any pipeline authorities. No pipelines were crossed during hauling and stockpiling activities.
- A minimum 30 metre (m) buffer with no biosolids application was maintained around all wetlands and no biosolids were applied to areas where periodic flooding or ponding crosses onto an adjacent landowner's property.
- All equipment was well maintained and no biosolids were deposited or spilled onto public roadways.
- No releases, spills, or discharge of biosolids into a watercourse or onto land not designated to receive biosolids occurred.

Post-application monitoring requirements included:

- Sampling and analysis for Alberta Tier 1 metals for all land units where pre-application soil pH was lower than 6.0 in the 0-30 cm depth and lime is not added to adjust pH accordingly.

4.0 BIOSOLIDS APPLICATION: AUTHORIZATION NO. 639-32733-SLU

In September 2023 dewatered biosolids were hauled to the SE 07-54-21 W4M in Strathcona County and in October 2023 dewatered biosolids were applied to SW 07-54-21 W4M and SE 07-54-21 W4M in accordance with Authorization No. 639-32733-SLU.

Olstad & Company and EPCOR did not apply biosolids to the NW 07-54-21 W4M in 2023 or 2024 due to limitations in the amount of dewatered biosolids available for application.

4.1 Landowner Information

The landowner is Chris Allam (780-777-4276). A signed acknowledgement and authorization letter from Chris Allam is attached in Appendix C.

4.2 Receiving Site Conditions

A summary of soil analytical results for the receiving site, prior to biosolids application, are provided in Table A. Within NW 07-54-21 W4M there is 20 ha which have 2-5% slopes, which make them Land Class 2, however this area did not receive biosolids in 2023. Figure 1 shows the biosolids application areas and buffer distances for Chris Allam's fields.

Table A: Marginal Lands 2020 Soil Analytical Results

Parameter	NW/SW/SE-07-54-21 W4M	NW-07-54-21 W4M
Area	125 ha (310 acres [ac])	20 ha (50 ac)
Surface pH (0-30 cm)	*5.99*	
Average pH (30-100 cm)	7.16	
Texture [1]	CL	
Slope %	<2	2-5
Depth to Potable Aquifer (m)	12.5	
Plant Available Nitrogen (kg/ha)	145	
Plant Available Phosphorus (kg/ha)	67	
Overall Land Class [2]	1	2

[1] CL = clay loam

[2] The overall land class shown is based on all classification parameters except the 0-30 cm surface pH. All marginal land fields shown have a 0-30 cm surface pH less than 6.0 and fall outside of the standard definition of agricultural lands.

4.3 Biosolids Characterization and Application Rate Calculations

EPCOR collects and analyses digested biosolids samples on a regular basis throughout the year and submits them to an accredited laboratory for analysis of percent total solids, total nitrogen (Total Kjeldahl Nitrogen, TKN), ammonium nitrogen (NH_4-N), total phosphorus, and trace elements. Dewatered biosolids analytical data from a sample collected June 10, 2023 was provided to Tetra Tech by EPCOR. This data was used to calculate preliminary biosolids application rates of 19.8 dry tonnes per hectare (dt/ha) for Class 1 land, 15.4 dt/ha for Class 2 land, and 8.8 dt/ha for Class 3 land in the September 2023 Authorization Application.

In accordance with the Authorization Applications submitted to EPA, EPCOR collected and analyzed additional dewatered biosolids samples prior to application. Daily samples collected in September 2023 during dewatered biosolids production indicated an average solids content of 24.3% in the material hauled and stockpiled on the SE 07-54-21 W4M in Strathcona County (Table 1).

Olstad & Company and EPCOR also proposed to collect samples of the stockpiled biosolids prior to application, as nitrogen losses in the stockpiled biosolids were expected between the stockpiling and application dates due to volatilization and mineralization. In addition to the sample collected on September 7, 2023 while stockpiling the dewatered biosolids, a composite sample of the stockpiled material on the SE 07-54-21 W4M was collected on September 19, 2023. The two samples were analyzed for trace element, total phosphorus, TKN, NH4-N, and available sulphate parameters. Analytical results are summarized in Table 1.

The average nitrogen (TKN and NH_4-N) concentrations of the samples collected during dewatered biosolids production (September 7 sample) and from the stockpile (September 19 sample) were used to calculate a final biosolids application rate based on the maximum allowable nitrogen application rate in order to maximize the organic matter application rate to these marginal lands. Application limits based on the total solids content was not applied to these marginal lands as this had the potential to limit the amount of organic matter applied.

A final calculated maximum biosolids application rate for the marginal lands described in Authorization No. 639-32733-SLU was 30.8 dt/ha for Class 1 land, 24.0 dt/ha for Class 2 land, and 13.7 dt/ha for Class 3 land (Table 2). Total nitrogen was the most limiting parameter for determination of the biosolids application rate.

4.4 Biosolids Application Results

A summary of biosolids application details is provided in Table B. Detailed biosolids application rate details are provided in Tables 3A and 3B.

Table B: 2023 Marginal Lands Biosolids Application Site Details

Legal Location	Land Class [1]	Calculated Rate (dt/ha)	Area (ha)	Total Applied (dt)	Final Application Rate (dt/ha)	Stockpiling Dates	Application Dates
NW 07-54-21 W4M	4 (2)	-	-	0	No Biosolids Applied	Not Applicable	Not Applicable
NW 07-54-21 W4M	4 (1)	-	-	0	No Biosolids Applied	Not Applicable	Not Applicable
SW 07-54-21 W4M	4 (1)	*30.8*	31.5	701	**22.3**	Not Applicable	October 15-16, 2023
SE 07-54-21 W4M	4 (1)	*30.8*	39.9	888	**22.3**	September 6-27, 2023	October 15-16, 2023

[1] All marginal land fields are land class 4 based on a 0-30 cm surface pH less than 6.0. The overall land class shown in brackets is based on all classification parameters except the 0-30 cm surface pH and is used to determine the allowable application rate based on the nitrogen content of the biosolids.

On the SW 07-54-21 W4M and SE 07-54-21 W4M quarters where the biosolids were applied, a final application rate of 22.3 dt/ha was achieved. The application rate on this field was limited by the total amount of biosolids available for application.

Biosolids were not applied to the NW 07-54-21 W4M quarter section in 2023 or 2024 due to the limited quantity of dewatered biosolids available for application.

5.0 BIOSOLIDS APPLICATION: AUTHORIZATION NO. 639-32787-SLU

In June, July, and August 2023 dewatered biosolids were hauled to the NW 14-55-23 W4M in Sturgeon County and in October 2023 dewatered biosolids were applied to fields in the NW 14-55-23 W4M, NE 14-55-23 W4M, and SW 23-55-23 W4M in accordance with Authorization No. 639-32787-SLU.

Olstad & Company and EPCOR decided to not apply biosolids to two fields (NW 02-55-23 W4M and SW 11-55-23 W4M) in 2023 or 2024 due to Authorization Appendix Condition No. 4 requiring lime application prior to biosolids application.

5.1 Landowner Information

The landowner is Blair Nikiforuk (780-818-1028). A signed acknowledgement and authorization letter from Blair Nikiforuk is attached in Appendix C.

5.2 Receiving Site Conditions

A summary of soil analytical results for the receiving sites, prior to biosolids application, are provided in Table C. Figures 2, 3 and 4 show the biosolids application areas and buffer distances for Blair Nikiforuk's fields.

Table C: Marginal Lands 2022 Soil Analytical Results

Parameter	NW 14-55-23 W4M	NE 14-55-23 W4M	SW 23-55-23 W4M
Surface pH (0-30 cm)	*5.89*	*5.77*	*5.89*
Average pH (30-100 cm)	7.6	7.6	7.7
Texture [1]	CL	SL	SL
Slope %	1	<2	<2
Depth to Potable Aquifer (m)	11	11	11
Plant Available Nitrogen (kg/ha)	70	160	145
Plant Available Phosphorus (kg/ha)	40	101	116
Overall Land Class [2]	1	3	3

[1] CL = clay loam, SL = sandy loam

[2] The overall land class shown is based on all classification parameters except the 0-30 cm surface pH. All marginal land fields shown have a 0-30 cm surface pH less than 6.0 and fall outside of the standard definition of agricultural lands.

5.3 Biosolids Characterization and Application Rate Calculations

EPCOR collects and analyses digested biosolids samples on a regular basis throughout the year and submits them to an accredited laboratory for analysis of percent total solids, total nitrogen (Total Kjeldahl Nitrogen, TKN), ammonium nitrogen (NH_4-N), total phosphorus, and trace elements. Dewatered biosolids analytical data from a sample collected June 10, 2023 was provided to Tetra Tech by EPCOR. This data was used to calculate preliminary biosolids application rates of 19.8 dry tonnes per hectare (dt/ha) for Class 1 land, 15.4 dt/ha for Class 2 land, and 8.8 dt/ha for Class 3 land in the July 2023 Authorization Application.

In accordance with the Authorization Application submitted to EPA, EPCOR collected and analyzed additional dewatered biosolids samples prior to application. Daily samples collected in June, July, and August 2023 during dewatered biosolids production indicated an average solids content of 22.6% in the material hauled and stockpiled on the NW 14-55-23 W4M in Sturgeon County (Table 4).

Olstad & Company and EPCOR also proposed to collect samples of the stockpiled biosolids prior to application, as nitrogen losses in the stockpiled biosolids were expected between the stockpiling and application dates due to volatilization and mineralization. In addition to the sample collected on July 10, 2023 during stockpiling of the dewatered biosolids, two additional composite samples were collected on October 12, 2023 from the stockpiled material on the NW 14-55-23 W4M. All samples were analyzed for trace element, total phosphorus, TKN, NH4-N, and available sulphate parameters; analytical results are summarized in Table 4.

The average nitrogen (TKN and NH_4-N) concentrations of the samples collected during dewatered biosolids production (July 10 sample) and from the stockpile (October 12 samples) were used to calculate a final biosolids application rate based on the maximum allowable nitrogen application rate in order to maximize the organic matter application rate to these marginal lands. Application limits based on the total solids content was not applied to these marginal lands as this had the potential to limit the amount of organic matter applied.

A final calculated biosolids application rate for the marginal lands described in Authorization No. 639-32787-SLU was 46.7 dt/ha for Class 1 land, 36.3 dt/ha for Class 2 land, and 20.8 dt/ha for Class 3 land (Table 5). Ammonium nitrogen was the most limiting parameter for determination of the biosolids application rate.

5.4 Biosolids Application Results

A summary of biosolids application details is provided in Table D. Detailed biosolids application rate details are provided in Tables 6A, 6B, and 6C. The equipment used and the dewatered biosolids application spread pattern is shown on Photos 1 to 4.

Table D: 2023 Marginal Lands Biosolids Application Rate Details

Legal Location	Land Class [1]	Calculated Rate (dt/ha)	Area (ha)	Total Applied (dt)	Final Application Rate (dt/ha)	Stockpiling Dates	Application Dates
NW-02-55-23 W4M	4 (1)	-	-	0	No Biosolids Applied	Not Applicable	Not Applicable
SW-11-55-23 W4M	4 (1)	-	-	0	No Biosolids Applied	Not Applicable	Not Applicable
NW-14-55-23 W4M	4 (1)	*46.7*	27	574	**21.1**	June 22 to August 28, 2023	October 18-21, 2023
NE-14-55-23 W4M	4 (3)	*20.8*	49	881	**18.1**	Not Applicable	October 18-21, 2023
SW-23-55-23 W4M	4 (3)	*20.8*	44	900	**20.7**	Not Applicable	October 18-21, 2023

[1] All marginal land fields are land class 4 based on a 0-30 cm surface pH less than 6.0. The overall land class shown in brackets is based on all classification parameters except the 0-30 cm surface pH and is used to determine the allowable application rate based on the nitrogen content of the biosolids.

On the NE 14-55-23 W4M and SW 23-55-23 W4M quarters, biosolids application rates were maximized based on the available ammonium nitrogen content of the biosolids, with rates of 18.1 dt/ha and 20.7 dt/ha applied, respectively. These application rates were used in order to maximize the amount of organic matter applied to these sandy loam textured soils.

On the NW 14-55-23 W4M quarter where the biosolids were stockpiled, a final application rate of 21.1 dt/ha was achieved. The application rate on this field was limited by the total amount of dewatered biosolids available for application.

Biosolids were not applied to the NW 02-55-23 W4M and SW 11-55-23 W4M quarter sections in 2023 or 2024. Approval condition 4 specified that these two quarters were not eligible to receive biosolids unless lime was applied prior to biosolids application. EPCOR and Olstad & Company made the decision to not apply biosolids rather than attempt to obtain a suitable supply of lime.

6.0 MONITORING PROGRAMS

6.1 Authorization No. 639-32733-SLU (Strathcona County)

As per Authorization No. 639-32733-SLU, post-application sampling and analysis for Alberta Tier 1[6] metals in the 0-15 cm and 15-30 cm depths was conducted in 2024 in all land units where the pre-application soil pH was lower than 6.0 in the 0-30 cm depth and where dewatered biosolids were applied in 2023 (Table 7 and Figure 1). These include:

- SW 07-54-21 W4M, Land Unit 2.
- SE 07-54-21 W4M, Land Units 1, 2, and 3.

Pre-application metals data was not collected prior to biosolids application and therefore a predicted loading rate was not modeled.

Post application soil metals data is summarized in Table 8. All analyzed metal concentrations were less than their respective maximum allowable concentration (MAC; the Alberta Tier 1 guideline value) and all post application metal concentrations were less than 80% of the Tier 1 guideline except one. The selenium concentration (0.9 mg/kg) in the SE-07-54-21 W4M Land Unit 1, 15-30 cm sample was marginally greater then the 80% of MAC value of 0.8 mg/kg and likely represents the range of natural variability for selenium in the field. The 15-30 cm field average for selenium (0.6 mg/kg) was well below the 80% of MAC threshold.

The post application average concentrations of regulated metals[7] in biosolids (arsenic, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, and zinc) are shown in Appendix D (Figures D1.As to D1.Zn) in relation to the MAC (Alberta Tier 1 guideline) and 80% of MAC values. Note that in cases where the metal concentrations were reported as less then the laboratory detections limit (e.g., <0.05 mg/kg), half of the detection limit (e.g., 0.025 mg/kg) was used to obtain a numerical average for graphing.

The application of biosolids to SW 07-54-21 W4M and SE 07-54-21 W4M field in Strathcona County did not result in metal concentrations greater than the Alberta Tier 1 Guidelines in the 0-15 cm and 15-30 cm sample depths.

6.2 Authorization No. 639-32787-SLU (Sturgeon County)

As per Authorization No. 639-32787-SLU, post-application sampling and analysis for Alberta Tier 1 metals in the 0-15 cm and 15-30 cm depths was conducted in 2024 in all land units where the pre-application soil pH was lower than 6.0 in the 0-30 cm depth and where dewatered biosolids were applied in 2023 (Table 9 and Figures 2-4). These include:

- NW 14-55-23 W4M, Land Units 1 and 2.
- NE 14-55-23 W4M, Land Units 2, 3, and 4.
- SW 23-55-23 W4M, Land Units 1, 2, and 3.

[6] Alberta Environment and Protected Areas (AEPA). 2024. Alberta Tier 1 Soil and Groundwater Remediation Guidelines. AEPA, Lands Policy, 2024, No. 1.

[7] Regulated metals under *draft* AEPA Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands.

Pre-application soil metals data was collected in 2022 (Table 10). Preliminary trace element (metals) loading modelling data provided in Application No 639-32787-SLU[8] indicated that the application of dewatered biosolids to these marginal lands would not result in the regulated metal concentrations exceeding the MAC (Alberta Tier 1 guideline value) or 80% of MAC threshold. Prior to application in fall 2023, the stockpiled biosolids were analyzed (Table 4) and a revised allowable application rate calculated. The predicated loading rate model was also updated prior to application, confirming that the increased application rates would not result in the regulated metal concentrations exceeding the MAC or 80% of MAC thresholds.

Post application, the stockpiled biosolids metals data and final (actual) application rate data was used to model the final metals loading rate for each field (Tables 11A-11C). For all three fields, the calculated metals loading rate was below the MAC and 80% or MAC thresholds.

Post application soil metals data is summarized in Table 12. All analyzed metal concentrations were less than their respective MAC (the Alberta Tier 1 guideline value) and all post application metal concentrations were less than 80% of the Tier 1 guideline except one. The selenium concentration (0.9 mg/kg) in the NE-14-55-23 W4M Land Unit 4, 0-15 cm sample was marginally greater then the 80% of MAC value of 0.8 mg/kg and likely represents the range of natural variability for selenium in the field. The 0-15 cm field average for selenium (0.7 mg/kg) was well below the 80% of MAC threshold.

The post application average concentrations of regulated metals in biosolids are shown in Appendix D (Figures D2.As to D2.Zn) in relation to the MAC and 80% of MAC values. For the regulated metals arsenic, cadmium, chromium, cobalt, copper, lead, nickel, and zinc, the post-application regulated metal concentrations were equivalent to or lower than the pre-application concentrations and lower than the predicted loading concentration. For mercury and molybdenum, the post-application concentrations appear to have increased relative to the pre-application concentrations, but results were reported as less then the laboratory detections limit (e.g., <0.05 mg/kg) and half of the detection limit (e.g., 0.025 mg/kg) was used for graphing purposes. There is no indication that mercury and molybdenum concentrations have increased as a result of biosolids application. For selenium, the post-application concentrations were lower than the pre-application concentrations and lower than the predicted loading concentration in the NE-14 and SW-23 fields. In the NW-14 field, the post-application selenium concentrations were slightly higher than the pre-application concentration but well below the MAC and 80% of MAC values, and are likely representative of the range of natural variability within the field.

The application of biosolids to NW 14-55-23 W4M, NE 14-55-23 W4M, and SW 23-55-23 W4M fields in Sturgeon County did not result in metal concentrations greater than the Alberta Tier 1 Guidelines in the 0-15 cm and 15-30 cm sample depths.

Notes:

The data was collected in 2023 and used to determine the application rates for 2023.

[1] Concentrations are the percent solids results after the daily field samples have been composited.

[2] Data presented as per the laboratory results. Reported concentrations are with respect to Dry Weight

[3] The detection limit was used to calculate the average for values reported less than the detection limit.

NA - Not Applicable.

Table 2: Municipal Biosolids Application Rate Calculations Worksheet - SW/SE 07-54-21 W4M

MUNICIPAL BIOSOLIDS QUALITY REPORT*

Biosolids Data [1]	Average (%)
Solids %	24.3
Total Nitrogen % [2]	2.92
Ammonium Nitrogen %	0.62
Total Phosphorus %	2.98

Average solids content of the dewatered biosolids transported to the Strathcona County fields.

Total nitrogen, ammonium nitrogen, total phosporous, and metal concentrations are an average of the September 7, 2023 and September 19, 2023 samples of stockpiled dewatered biosolids.

Notes:

[1] Dewatered biosolids analytical data provided by EPCOR.

[2] Total Kjeldahl Nitrogen (TKN).

* The Quality Report is taken from Alberta Environment (AENV) 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 27.

Metal Concentration in Biosolids	Average Biosolids Data (µg/g)	Nitrogen Calculations			Phosphorus Calculations		
		Calculations[1] N:metal Ratio[3]	Guide Minimum[2]	Difference[5]	Calculations[1] P:metal Ratio[4]	Guide Minimum[2]	Difference[5]
Cd	4.53	6,446	1,500	4,946	6,567	600	5,967
Cr	134	218	20	198	222	8	214
Cu	462	63	15	48	64.4	6	58.4
Pb	52.4	557	20	537	568	8	560
Hg	1.57	18,599	3,000	15,599	18,949	1,100	17,849
Ni	38.4	760	100	660	775	40	735
Zn	848	34	10	24	35.1	4	31.1

Notes:

[1] N/metal ratio = [Total N (%) *10,000]/metal (µg/g) or P/metal ratio = [Total P (%) *10,000]/metal (µg/g).

[2] The Guide Minimums are stipulated in Table 1 of the 2001 AENV Wastewater Guidelines (page 17). Biosolids is unacceptable if either the nitrogen or phosphorus criterion is not met. Spiking biosolids with nitrogen or phosphorus to achieve these ratios is not permitted.

[3] N:metal ratio is calculated as the total Nitrogen % in the biosolids divided by the metal concentration.

[4] P:metal ratio is calculated as the total phosphorus % in the biosolids divided by the metal concentration.

[5] The difference value is the guide minimum subtracted from the recorded ratio for either nitrogen or phosphorus.

MUNICIPAL BIOSOLIDS PARAMETERS LIMITING APPLICATION RATE

Parameter[1]	Calculation Formula[2,3]	CLASS 1 - Digested[4]	Calculation Formula[2,3]	CLASS 2 - Digested[4]	Calculation Formula[2,3]	CLASS 3 - Digested[4]
Solids		**25**		**20**		**10**
Total N	90/total N (%)	30.8	70/total N (%)	24.0	40/total N (%)	13.7
NH_4-N (Injected)	20/NH_4-N (%)[5]	32.3	20/NH_4-N (%)[5]	32.3	15/NH_4-N (%)[5]	24.3
NH_4-N (Surface)	45/NH_4-N (%)[5]	72.8	35/NH_4-N (%)[5]	56.6	20/NH_4-N (%)[5]	32.3
Cd	1,500/[3*Cd(µg/g)]	110	1,100/[3*Cd(µg/g)]	81	800/[3*Cd(µg/g)]	59
Cr	100,000/[3*Cr (µg/g)]	249	75,000/[3*Cr (µg/g)]	187	50,000/[3*Cr (µg/g)]	124
Cu	200,000/[3*Cu (µg/g)]	144	150,000/[3*Cu (µg/g)]	108	100,000/[3*Cu (µg/g)]	72.2
Pb	100,000/[3*Pb (µg/g)]	636	75,000/[3*Pb (µg/g)]	477	50,000/[3*Pb (µg/g)]	318
Hg	500/[3*Hg (µg/g)]	106	400/[3*Hg (µg/g)]	85	200/[3*Hg (µg/g)]	42.5
Ni	25,000/[3*Ni (µg/g)]	217	19,000/[3*Ni (µg/g)]	165	12,000/[3*Ni (µg/g)]	104
Zn	300,000/[3*Zn (µg/g)]	118	200,000/[3*Zn (µg/g)]	79	150,000/[3*Zn (µg/g)]	59.0
Rate (t/ha)		30.8		24.0		13.7
Parameter Most Limiting[6]		Total N		Total N		Total N

Notes:

[1] The parameter is the name that is given to each row (i.e., solids, total N) and the name that is used to indicate which row is the most limiting.

[2] The calculation formulae for digested waste are taken from AENV 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 28.

[3] Note that the laboratory reports metal analysis in units of mg/kg, which is the same as µg/g.

[4] The class relates to the site classification status where Class 1 is the most suitable, Class 2 the second most suitable, Class 3 more suitable than Class 4, and Class 4 is not at all suitable (fail).

[5] The AENV 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 28 show the units for NH_4-N as µg/g. This is incorrect, units are NH_4-N(%) as shown in this table.

[6] The most limiting parameter relates to the lowest value for each class number and is calculated as per the given formula.

Notes:

The data was collected in 2023 and used to determine the application rates for 2023.

[1] Concentrations are the percent solids results after the daily field samples have been composited.

[2] Data presented as per the laboratory results. Reported concentrations are with respect to Dry Weight

[3] The detection limit was used to calculate the average for values reported less than the detection limit.

NA - Not Applicable.

Table 5: Municipal Biosolids Application Rate Calculations Worksheet - NW/NE 14-55-23 W4M and SW 23-55-23 W4M

MUNICIPAL BIOSOLIDS QUALITY REPORT*

Biosolids Data [1]	Average (%)
Solids %	22.6
Total Nitrogen % [2]	1.18
Ammonium Nitrogen %	0.96
Total Phosphorus %	2.63

Average solids content of the dewatered biosolids transported to the Sturgeon County fields

Total nitrogen, ammonium nitrogen, total phosporous, and metal concentrations are an average of the July 10, 2023 and October 12, 2023 samples of stockpiled dewatered biosolids

Notes:

[1] Dewatered biosolids analytical data provided by EPCOR.

[2] Total Kjeldahl Nitrogen (TKN).

* The Quality Report is taken from Alberta Environment (AENV) 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 27.

Metal Concentration in Biosolids	Average Biosolids Data (µg/g)	Nitrogen Calculations			Phosphorus Calculations		
		Calculations[1] N:metal Ratio[3]	Guide Minimum[2]	Difference[5]	Calculations[1] P:metal Ratio[4]	Guide Minimum[2]	Difference[5]
Cd	3.85	3,074	1,500	1,574	6,823	600	6,223
Cr	81.0	146	20	126	324	8	316
Cu	456	26	15	11	57.6	6	51.6
Pb	39.9	297	20	277	658	8	650
Hg	1.22	9,699	3,000	6,699	21,530	1,100	20,430
Ni	37.2	318	100	218	706	40	666
Zn	855	14	10	4	30.7	4	26.7

Notes:

[1] N/metal ratio = [Total N (%) *10,000]/metal (µg/g) or P/metal ratio = [Total P (%) *10,000]/metal (µg/g).

[2] The Guide Minimums are stipulated in Table 1 of the 2001 AENV Wastewater Guidelines (page 17). Biosolids is unacceptable if either the nitrogen or phosphorus criterion is not met. Spiking biosolids with nitrogen or phosphorus to achieve these ratios is not permitted.

[3] N:metal ratio is calculated as the total Nitrogen % in the biosolids divided by the metal concentration.

[4] P:metal ratio is calculated as the total phosphorus % in the biosolids divided by the metal concentration.

[5] The difference value is the guide minimum subtracted from the recorded ratio for either nitrogen or phosphorus.

MUNICIPAL BIOSOLIDS PARAMETERS LIMITING APPLICATION RATE

Parameter[1]	Calculation Formula[2,3]	CLASS 1 - Digested[4]	Calculation Formula[2,3]	CLASS 2 - Digested[4]	Calculation Formula[2,3]	CLASS 3 - Digested[4]
Solids		**25**		**20**		**10**
Total N	90/total N (%)	76.1	70/total N (%)	59.2	40/total N (%)	33.8
NH_4-N (Injected)	20/NH_4-N (%)[5]	20.8	20/NH_4-N (%)[5]	20.8	15/NH_4-N (%)[5]	15.6
NH_4-N (Surface)	45/NH_4-N (%)[5]	46.7	35/NH_4-N (%)[5]	36.3	20/NH_4-N (%)[5]	20.8
Cd	1,500/[3*Cd(µg/g)]	130	1,100/[3*Cd(µg/g)]	95	800/[3*Cd(µg/g)]	69
Cr	100,000/[3*Cr (µg/g)]	412	75,000/[3*Cr (µg/g)]	309	50,000/[3*Cr (µg/g)]	206
Cu	200,000/[3*Cu (µg/g)]	146	150,000/[3*Cu (µg/g)]	110	100,000/[3*Cu (µg/g)]	73.1
Pb	100,000/[3*Pb (µg/g)]	835	75,000/[3*Pb (µg/g)]	627	50,000/[3*Pb (µg/g)]	418
Hg	500/[3*Hg (µg/g)]	137	400/[3*Hg (µg/g)]	109	200/[3*Hg (µg/g)]	54.6
Ni	25,000/[3*Ni (µg/g)]	224	19,000/[3*Ni (µg/g)]	170	12,000/[3*Ni (µg/g)]	108
Zn	300,000/[3*Zn (µg/g)]	117	200,000/[3*Zn (µg/g)]	78	150,000/[3*Zn (µg/g)]	58.5
Rate (t/ha)		46.7		36.3		20.8
Parameter Most Limiting[6]		NH4-N		NH4-N		NH4-N

Notes:

[1] The parameter is the name that is given to each row (i.e., solids, total N) and the name that is used to indicate which row is the most limiting.

[2] The calculation formulae for digested waste are taken from AENV 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 28.

[3] Note that the laboratory reports metal analysis in units of mg/kg, which is the same as µg/g.

[4] The class relates to the site classification status where Class 1 is the most suitable, Class 2 the second most suitable, Class 3 more suitable than Class 4, and Class 4 is not at all suitable (fail).

[5] The AENV 2001 Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands, Page 28 show the units for NH_4-N as µg/g. This is incorrect, units are NH_4-N(%) as shown in this table.

[6] The most limiting parameter relates to the lowest value for each class number and is calculated as per the given formula.

Notes:

[1] Biosolids_Municipal_Calculations_Draft_Calculator_JAN162023_Metals only.xlsx. Patterson, S. (Science and Technology Specialist, AEPA). 2023. Email communication: RE: Land Application Guideline - Follow Up. January 18, 2023.

[2] Maximum allowable concentration in biosolids. Adopted from the CAN/BNQ National Standard of Canada, values were taken from Table 5 (A comparison of trace element concentrations in manures, municipal sludge and septage) from the Guidance Document for the Beneficial Use of Municipal Biosolids, Municipal Sludge, and Treated Septage (CCME, 2012).

[3] Maximum allowable concentration in soil: The default selected is the Alberta Tier - 1 Guideline Value for agricultural land use.

[4] Geometric mean was selected to align with *A Protocol for the Derivation of Environmental and Human Health Soil Quality Guidelines* (CCME 2006).

[5] Suitability of the biosolids for land application. "Unsuitable" indicates this geometric mean of the biosolid quality for a given parameter exceeds the maximum allowable concentration (MAC) for that parameter.

[6] Formula correction applied such that if the biosolids geometric mean is less than the Biosolids MAC, the Biosolids Suitability is displayed as "Suitable".

[7] Laboratory analysis of the 15-30 cm depth sample is optional. For trace element modelling purposes, Tetra Tech has assumed the 15-30 cm depth sample concentrations are the same as the 0-15 cm depth samples.

[8] Suitablity of the proposed application rate at the receiving site. Suitability takes into consideration the application rate and quality of the biosolids being applied as well as the quality of the receiving soils. "Unsuitable" means that one or more of these factors may affecting whether or not biosolids may be applied at the receiving site.

APPENDIX A

TETRA TECH'S LIMITATIONS ON THE USE OF THIS DOCUMENT

LIMITATIONS ON USE OF THIS DOCUMENT

NATURAL SCIENCES

1.1 USE OF DOCUMENT AND OWNERSHIP

This document pertains to a specific site, a specific development, and a specific scope of work. The document may include plans, drawings, profiles and other supporting documents that collectively constitute the document (the "Professional Document").

The Professional Document is intended for the sole use of TETRA TECH's Client (the "Client") as specifically identified in the TETRA TECH Services Agreement or other Contractual Agreement entered into with the Client (either of which is termed the "Contract" herein). TETRA TECH does not accept any responsibility for the accuracy of any of the data, analyses, recommendations or other contents of the Professional Document when it is used or relied upon by any party other than the Client, unless authorized in writing by TETRA TECH.

Any unauthorized use of the Professional Document is at the sole risk of the user. TETRA TECH accepts no responsibility whatsoever for any loss or damage where such loss or damage is alleged to be or, is in fact, caused by the unauthorized use of the Professional Document.

Where TETRA TECH has expressly authorized the use of the Professional Document by a third party (an "Authorized Party"), consideration for such authorization is the Authorized Party's acceptance of these Limitations on Use of this Document as well as any limitations on liability contained in the Contract with the Client (all of which is collectively termed the "Limitations on Liability"). The Authorized Party should carefully review both these Limitations on Use of this Document and the Contract prior to making any use of the Professional Document. Any use made of the Professional Document by an Authorized Party constitutes the Authorized Party's express acceptance of, and agreement to, the Limitations on Liability.

The Professional Document and any other form or type of data or documents generated by TETRA TECH during the performance of the work are TETRA TECH's professional work product and shall remain the copyright property of TETRA TECH.

The Professional Document is subject to copyright and shall not be reproduced either wholly or in part without the prior, written permission of TETRA TECH. Additional copies of the Document, if required, may be obtained upon request.

1.2 ALTERNATIVE DOCUMENT FORMAT

Where TETRA TECH submits electronic file and/or hard copy versions of the Professional Document or any drawings or other project-related documents and deliverables (collectively termed TETRA TECH's "Instruments of Professional Service"), only the signed and/or sealed versions shall be considered final. The original signed and/or sealed electronic file and/or hard copy version archived by TETRA TECH shall be deemed to be the original. TETRA TECH will archive a protected digital copy of the original signed and/or sealed version for a period of 10 years.

Both electronic file and/or hard copy versions of TETRA TECH's Instruments of Professional Service shall not, under any circumstances, be altered by any party except TETRA TECH. TETRA TECH's Instruments of Professional Service will be used only and exactly as submitted by TETRA TECH.

Electronic files submitted by TETRA TECH have been prepared and submitted using specific software and hardware systems. TETRA TECH makes no representation about the compatibility of these files with the Client's current or future software and hardware systems.

1.3 STANDARD OF CARE

Services performed by TETRA TECH for the Professional Document have been conducted in accordance with the Contract, in a manner consistent with the level of skill ordinarily exercised by members of the profession currently practicing under similar conditions in the jurisdiction in which the services are provided. Professional judgment has been applied in developing the conclusions and/or recommendations provided in this Professional Document. No warranty or guarantee, express or implied, is made concerning the test results, comments, recommendations, or any other portion of the Professional Document.

If any error or omission is detected by the Client or an Authorized Party, the error or omission must be immediately brought to the attention of TETRA TECH.

1.4 DISCLOSURE OF INFORMATION BY CLIENT

The Client acknowledges that it has fully cooperated with TETRA TECH with respect to the provision of all available information on the past, present, and proposed conditions on the site, including historical information respecting the use of the site. The Client further acknowledges that in order for TETRA TECH to properly provide the services contracted for in the Contract, TETRA TECH has relied upon the Client with respect to both the full disclosure and accuracy of any such information.

1.5 INFORMATION PROVIDED TO TETRA TECH BY OTHERS

During the performance of the work and the preparation of this Professional Document, TETRA TECH may have relied on information provided by persons other than the Client.

While TETRA TECH endeavours to verify the accuracy of such information, TETRA TECH accepts no responsibility for the accuracy or the reliability of such information even where inaccurate or unreliable information impacts any recommendations, design or other deliverables and causes the Client or an Authorized Party loss or damage.

1.6 GENERAL LIMITATIONS OF DOCUMENT

This Professional Document is based solely on the conditions presented and the data available to TETRA TECH at the time the data were collected in the field or gathered from available databases.

The Client, and any Authorized Party, acknowledges that the Professional Document is based on limited data and that the conclusions, opinions, and recommendations contained in the Professional Document are the result of the application of professional judgment to such limited data.

The Professional Document is not applicable to any other sites, nor should it be relied upon for types of development other than those to which it refers. Any variation from the site conditions present or variation in assumed conditions which might form the basis of design or recommendations as outlined in this report, at or on the development proposed as of the date of the Professional Document requires a supplementary investigation and assessment.

TETRA TECH is neither qualified to, nor is it making, any recommendations with respect to the purchase, sale, investment or development of the property, the decisions on which are the sole responsibility of the Client.

1.7 ENVIRONMENTAL ISSUES

The ability to rely upon and generalize from environmental baseline data is dependent on data collection activities occurring within biologically relevant survey windows.

It is incumbent upon the Client and any Authorized Party, to be knowledgeable of the level of risk that has been incorporated into the project design or scope, in consideration of the level of the environmental baseline information that was reasonably acquired to facilitate completion of the scope.

1.8 NOTIFICATION OF AUTHORITIES

TETRA TECH professionals are bound by their ethical commitments to act within the bounds of all pertinent regulations. In certain instances, observations by TETRA TECH of regulatory contravention may require that regulatory agencies and other persons be informed. The client agrees that notification to such bodies or persons as required may be done by TETRA TECH in its reasonably exercised discretion.

Dear Mr. Curran:

Re: Letter of Authorization – Biosolids Application to Land
EPCOR Water Services Inc. (EWSI) – Edmonton Wastewater System
***Environmental Protection and Enhancement Act (EPEA)* Approval No. 639-03-00**

Environment and Protected Areas (EPA) has reviewed the submission made by EPCOR Water Services Inc. (EWSI) dated September 12, 2023. EWSI is requesting an authorization to apply wastewater biosolids to lands located at the following quarter sections within the Strathcona County:

- NW 07-54-21 W4M
- SW 07-54-21 W4M
- SE 07-54-21 W4M

This Letter of Authorization is issued pursuant to the *Environmental Protection and Enhancement Act*, Wastewater and Storm Drainage Regulation 119/93, Section 8.

Please note, as per the Condition No.12 of the attached Appendix to this Letter of Authorization, the Approval Holder shall submit summary reports to the Director as described.

If you have any questions regarding this letter, please contact Mohammad M. Rahman at (780) 422-1721.

Sincerely,

Gerald Feschuk, P. Eng.
Designated Director under the Act

Mohammad M. Rahman, EPA

AUTHORIZATION NO.
639-32557-SLU

APPENDIX

1. The dewatered biosolids from the Edmonton Wastewater System shall be stockpiled in accordance with the Alberta Environment and Parks' Draft Dewatered Biosolids Stockpiling Guidelines (October 19, 2009, prepared by Sylvis Environmental Services Inc.).

2. The following parcels of land may receive biosolids from the Edmonton Wastewater System at a rate not exceeding the dry biosoilds per hectare of land as described below:

Land Description	Area (ha)	Classification	Application Rate (dt/ha)
NW 07-54-21 W4M	20	2	15.4
NW 07-54-21 W4M	125	1	19.8
SW 07-54-21 W4M			
SE 07-54-21 W4M			

3. Post sampling and analysis for Alberta Tier 1 metals shall be conducted for the land units where pre-application soil pH is lower than 6.0 in the 0-30 cm depth and lime is not added to adjust pH accordingly including NW 07-54-21, SW 07-54-21 W4M and SE 07-54-21 W4M.

4. Biosolids shall be applied in accordance with Alberta Environment's *Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands*.

5. Land to which biosolids is applied shall be cultivated as soon as possible following the biosolids application.

6. Biosolids shall not be applied to soil that is frozen or snow covered.

7. Parcels of lands which have received biosolids within the past 3 years may only have biosolids applied to the portion of the parcel that was not completed during the prior application.

8. EWSI shall obtain written approval from the appropriate pipeline authority or authorities before any biosolids transport or spreading vehicles cross any pipeline or pipeline corridors located on the aforementioned parcels of land. Should permission not be obtained to travel over a pipeline or pipeline corridor then the area over the corridor must be marked and tanker travel over same prohibited.

9. Any parts of the aforementioned parcels of land which may be subject to periodic flooding or water ponding shall not receive biosolids if said flooding or ponding crosses onto an adjacent landowner's property.

10. Biosolids haulage and/or spreading vehicles shall be operated and maintained such that biosolids deposition on public roadways is minimized and does not create a public nuisance.

11. Any release, spill, or discharge into a watercourse or on land not designated to receive biosolids shall immediately be reported to the Environment and Protected Areas at 1-780-422-4505.

12. Following completion of the 2023 and 2024 biosolids spreading program, and no later than February 28, 2024, and 2025 respectively, EWSI shall submit biosoilds application summary report including the monitoring results to the Director.

13. This Letter of Authorization expires on June 30, 2024.

Dear Mr. Curran:

Re: Letter of Authorization – Biosolids Application to Land
EPCOR Water Services Inc. (EWSI) – Edmonton Wastewater System
***Environmental Protection and Enhancement Act (EPEA)* Approval No. 639-03-00**

We are enclosing the Letter of Authorization to apply wastewater biosolids to lands located at:

- NW 02-55-23 W4M
- SW 11-55-23 W4M
- NW 14-55-23 W4M
- NE 14-55-23 W4M
- SW 23-55-23 W4M

in Sturgeon County as described in your submission dated September 22, 2023. This Letter of Authorization is issued pursuant to the *Environmental Protection and Enhancement Act* (EPEA), Wastewater and Storm Drainage Regulation 119/93, Section 8.

Please note, as per the Condition No.13 of the attached Appendix to this Letter of Authorization, the Approval Holder shall submit summary reports to the Director as described. The letter of Authorization 639-32557 SLU issued on September 12, 2023, is cancelled.

If you have any questions regarding this letter, please contact Mohammad M. Rahman at (780) 422-1721 or via email to Mohammad.m.rahman@gov.ab.ca.

AUTHORIZATION NO.
639-32787-SLU

APPENDIX

1. The dewatered biosolids from the Edmonton Wastewater System shall be stockpiled in accordance with the Alberta Environment and Parks' Draft Dewatered Biosolids Stockpiling Guidelines (October 19, 2009, prepared by Sylvis Environmental Services Inc.).

2. The following parcels of land may receive biosolids from the Edmonton Wastewater System at a rate not exceeding the dry biosolids per hectare of land as described below:

Land Description	Area (ha)	Classification	Application Rate (dt/ha)
NW 02-55-23 W4M	65	1	19.8
SW 11-55-23 W4M	52	1	19.8
NW 14-55-23 W4M	32	1	19.8
NE 14-55-23 W4M	56	3	8.8
SW 23-55-23 W4M	52	3	8.8

3. Post application Alberta Tier 1 metals in the 0-15 cm and 15-30 cm depths shall be conducted for all applicable land units where pre-application soil pH is lower than 6.0 in the 0-30 cm depth and lime is not added to adjust pH, accordingly, including NW 14-55-23 W4M, NE 14-55-23 W4M and SW 23-55-23 W4M.

4. Biosolids shall not be applied in NW 02-55-23 W4M and SW 11-55-23 W4M unless the two fields are limed accordingly prior to biosolids being applied.

5. Biosolids shall be applied in accordance with Alberta Environment's *Guidelines for the* Application *of Municipal Wastewater Sludges to Agricultural Lands*.

6. Land to which biosolids is applied shall be cultivated as soon as possible following the biosolids application.

7. Biosolids shall not be applied to soil that is frozen or snow covered.

8. Parcels of lands which have received biosolids within the past 3 years may only have biosolids applied to the portion of the parcel that was not completed during the prior application.

9. EWSI shall obtain written approval from the appropriate pipeline authority or authorities before any biosolids transport or non-agricultural spreading vehicles cross any pipeline or pipeline corridors located on the aforementioned parcels of land. Should permission not be obtained to travel over a pipeline or pipeline corridor then the area over the corridor must be marked and tanker travel over same prohibited.

10. Any parts of the aforementioned parcels of land which may be subject to periodic flooding or water ponding shall not receive biosolids if said flooding or ponding crosses onto an adjacent landowner's property.

11. Biosolids haulage and/or spreading vehicles shall be operated and maintained such that biosolids deposition on public roadways is minimized and does not create a public nuisance.

12. Any release, spill, or discharge into a watercourse or on land not designated to receive biosolids shall immediately be reported to the Environment and Protected Areas at 1-780-422-4505.

13. Following completion of the 2023 and 2024 biosolids spreading program, and no later than February 28, 2024, and 2025 respectively, EWSI shall submit biosolids application summary report including the monitoring results to the Director.

14. This Letter of Authorization expires on June 30, 2024.

DATED: October 18, 2023

Designated Director Under the Act

APPENDIX C

LANDOWNER ACKNOWLEDGEMENT

Fluid Movement

Box 1059,
Lamont, Alberta
T0B 2R0 Canada

Dear Sir/Madame:

Thank you for your interest in the Olstad & Company Ltd. ("OLSTAD") City to Soil program.

This letter is to confirm that you have requested that the agricultural land described as:

S½ 7-54-21-W4 NW 7-54-21-W4

(the "Land") be considered a candidate site for the City to Soil program. As you know, the City to Soil program involves the application of biosolids to agricultural land in accordance with the Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands (Alberta Environment March 2001).

If acceptable to you, please return a fully signed original of the enclosed Acknowledgement and Authorization to the attention of Larry Olstad at the above address or email a fully signed copy to olstad.co@gmail.com. The Acknowledgement and Authorization must be signed by all owners and lessees of the Land. Once the fully signed Acknowledgement and Authorization has been received, OLSTAD will commence its assessment of the Land to determine if the Land is an appropriate candidate site for the City to Soil program.

For further information about the Nutri-Gold program please call 780-940- 4803.

LARRY OLSTAD

ACKNOWLEDGEMENT AND AUTHORIZATION:

Re: Potential application of biosolids to agricultural land described

as 5½-7-54-21-W4 NW7-54-21-W4 (the "Lands)

In consideration of Olstad & Company Ltd. ("OLSTAD"}: (i) evaluating the Lands as a potential candidate site for the Nutri-Gold program; and (ii) potentially applying biosolids to the Lands (if the Lands are determined to be suitable and are selected for application of biosolids, all as decided by OLSTAD in its sole discretion), the undersigned hereby agree(s) as follows:

1. I/We [insert name of land owner(s) and lessee(s)], hereby certify that we are the registered owner(s)/lessee{s) of the Lands and hereby request that the Lands be considered a candidate site for the Nutri-Gold program.

2. I/We understand that the Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands (Alberta Environment March 2001) (the "Guidelines") indicate as follows:

    a. biosolids application to agricultural land is intended for the production of forages, oil seeds, small grains (see the Guidelines for further recommendations), dried legumes (peas, beans, etc), trees and commercial sod;

    b. that no direct grazing be permitted on the Lands for a period of at least three years following application of biosolids; and

    c. that biosolids not be applied on land intended for production of root crops, tobacco and crops eaten raw (including without limitation fresh fruits and vegetables) or used in dairy farm pasturing.

3. I/We acknowledge and agree that any biosolids applied to or stockpiled on the Lands are provided on an as-is where-is basis and that OLSTAD disclaims all representations or warranties. express or implied, including without limitation any implied warranties of merchantability or fitness for any particular purpose.

4. I/We understand that there may be certain inherent risks associated with the application of biosolids to the Lands and I/we assume those risks. I/we hereby release and indemnify OLSTAD, its directors, officers, employees and affiliates from any losses, injuries, claims, demands, liabilities, damages or actions brought or made against OLSTAD, its directors, officers, employees or affiliates or which they may sustain or incur as a result of or in connection with the activities described herein, including without limitation performance of soil testing. the application of biosolids to the Lands and the stockpiling of biosolids on the Lands.

5. I/We hereby authorize OLSTAD, and its authorized agents, to enter upon the Lands in order to conduct soil testing to determine the suitability of the Lands for the City to Soil program and to communicate the results of this testing to third parties as may be required by law and for OLSTAD's administrative purposes.

6. If the Lands are determined to be suitable and are selected for the application of biosolids, I/We further authorize OLSTAD, and it authorized agents, to enter upon the Lands and apply the biosolids.

7. If OLSTAD has dewatered biosolids or lime that it wishes to stockpile on the Lands, I/We hereby authorize OLSTAD, and its authorized agents, to enter upon the Lands to stockpile the dewatered biosolids.

8. I/We understand that the City to Soil program is a program offered by OLSTAD at the sole discretion of OLSTAD as part of its biosolids management program and that OLSTAD may cancel, withdraw or adjust the application of biosolids at any time, without liability or notice, at OLSTAD's sole discretion.

9. I/We further agree that no compensation is payable by OLSTAD for the City to Soil program, including without limitation, for the soil testing, application of biosolids, stockpiling of biosolids/lime, or the cancellation, withdrawal or adjustment of any application of biosolids on the Lands.

10. I/We agree to advise OLSTAD if the ownership of the Lands changes or if the lessee(s) of the Lands change.

11. I/We agree to disclose that biosolids have been applied to the Lands to any potential purchaser or lessee of the Lands.

12. I/We agree that this Acknowledgement and Authorization will be valid for a period of three (3) years from the date of the final signature below.

13. I/We acknowledge that OLSTAD will be relying on the accuracy of and authorizations contained in the foregoing statements in performing the activities outlined herein, including without limitation soil testing, application of biosolids to the Lands and stockpiling of biosolids on the Lands.

14. This Acknowledgement and Authorization may be signed in any number of counterparts, each of which will be deemed to be an original and all of which taken together will be deemed to constitute one and the same document. Counterparts may be delivered in original form or by email and each copy will be deemed to be anoriginal.

15. I/We acknowledge that I/We understand that this agreement is exclusive and binding for 5 years and that no other biosolids may be applied or similar agreements can be entered into without the written permission of OLSTAD. I/We understand that this exclusive agreement is with OLSTAD and all Lands owned, rented or otherwise control are subject to this agreement with regards to any biosolids application for 5 years.

16. I/We acknowledge that I/We have read, understand and agree with all of the provisions of this Acknowledgement and Authorization, and acknowledge that I/We have had the opportunity to obtain independent legal advice with respect to it.

City to Soil
Delivered by Olstad & Company
Box 1059 Lamont, AB T0B 2R0

Dear Sir/Madam:

Re: Olstad & Company Ltd.- City to Soil Program Acknowledgement and Authorization

Thank you for your interest in the Olstad & Company Ltd. ("OLSTAD") City to Soil program.

This letter is to confirm that you have requested that the agricultural land described as:
N½ E&W NW2, SW11 55, 23 W4
~~S½ 14 55 23 W4~~ SW2355-23-W4 (the "Land")
be considered a candidate site for the City to Soil program. As you know, the City to Soil program involves the application of biosolids to agricultural land in accordance with the Guidelines for the Application of Municipal Wastewater Sludges to Agricultural Lands (Updated August 2009).

If acceptable to you, please return a fully signed original of the enclosed Acknowledgement and Authorization to the attention of Larry Olstad, Director at the above-noted mailing address or email to olstad.co@gmail.com.

The Acknowledgement and Authorization must be signed by all owners and lessees of the Land. Once the fully signed Acknowledgement and Authorization has been received, OLSTAD will commence its assessment of the Land to determine if the Land is an appropriate candidate site for the City to Soil program.

For further information about the City to Soil program please call Larry Olstad [780-940-4803].

Additional Notes:

Enclosure (1): Acknowledgement and Authorization Form

ACKNOWLEDGEMENT AND AUTHORIZATION

ication of biosolids to agricultural land described as:

55-23-W4 SW23-55-23-W4 (the "Lands").

Olstad & Company Ltd. ("OLSTAD") (I) evaluating the Lands as a potential candidate site for gram; and (ii) potentially applying biosolids to the Lands (if the Lands are determined to be selected for application of biosolids, all as decided by OLSTAD in its sole discretion), the by agree(s) as follows:

_____, hereby certify that we are the registered owner(s)/lessee(s) and hereby request that the Lands be considered a candidate site for the City to Soil program.

stand that the Guidelines for the Application of Municipal Wastewater Sludges to Agricultural lated August 2009) (the "Guidelines") indicate as follows:

solids application to agricultural land is intended for the production of forages, oil seeds, small ains (see the Guidelines for further recommendations), dried legumes (peas, beans, etc.), trees nd commercial sod;

nat no direct grazing be permitted on the Lands for a period of at least three years following application of biosolids; and

that biosolids not be applied on land intended for production of root crops, tobacco and crops eaten raw (including without limitation fresh fruits and vegetables) or used in dairy farm pasturing.

acknowledge and agree that any biosolids applied to or stockpiled on the Lands are provided on an as-ere-is basis and that OLSTAD disclaims all representations or warranties, express or implied, including out limitation any implied warranties of merchantability or fitness for any particular purpose.

e understand that there may be certain inherent risks associated with the application of biosolids to the nds and I/we assume those risks. I/we hereby release and indemnify OLSTAD, its directors, officers, nployees and affiliates from any losses, injuries, claims, demands, liabilities, damages or actions brought made against OLSTAD, its directors, officers, employees or affiliates or which they may sustain or incur s a result of or in connection with the activities described herein, including without limitation performance of oil testing, the application of biosolids to the Lands and the stockpiling of biosolids on the Lands.

I/We hereby authorize OLSTAD, and its authorized agents, to enter upon the Lands at any time this Acknowledgement and Authorization is in effect, in order to conduct soil testing to determine the suitability of the Lands for the City to Soil program and to communicate the results of this testing to third parties as may be required by law and for OLSTAD's administrative purposes.

If the Lands are determined to be suitable and are selected for the application of biosolids, I/We further authorize OLSTAD, and its authorized agents, to enter upon the Lands and apply the biosolids.

7. If OLSTAD has dewatered biosolids that it wishes to stockpile on the Lands, I/We hereby authorize OLSTAD, and its authorized agents, to enter upon the Lands to stockpile the dewatered biosolids in accordance with OLSTAD's program requirements. If there are unforeseen circumstances, including a weather event, I/We agree that OLSTAD may leave the stockpiled biosolids on the Lands until it is safe and able, in OLSTAD's sole discretion, to spread and incorporate the material onto the Lands.

8. I/We understand that the City to Soil program is a program offered by OLSTAD at the sole discretion of OLSTAD as part of its biosolids management program and that OLSTAD may cancel, withdraw or adjust the application of biosolids at any time, without liability or notice, at OLSTAD's sole discretion.

9. I/We further agree that no compensation is payable by OLSTAD for the City to Soil program, including without limitation, for the soil testing, application of biosolids, stockpiling of biosolids, or the cancellation, withdrawal or adjustment of any application of biosolids on the Lands.

10. I/We agree to advise OLSTAD if the ownership of the Lands changes or if the lessee(s) of the Lands change.

11. I/We agree to disclose that biosolids have been applied to the Lands to any potential purchaser or lessee of the Lands.

12. I/We agree that this Acknowledgement and Authorization is effective from the date of the final signature below and will be valid for a period of three (3) years.

13. I/We acknowledge that OLSTAD will be relying on the accuracy of and authorizations contained in the foregoing statements in performing the activities outlined herein, including without limitation soil testing, application of biosolids to the Lands and stockpiling of biosolids on the Lands.

14. This Acknowledgement and Authorization may be signed in any number of counterparts, each of which will be deemed to be an original and all of which taken together will be deemed to constitute one and the same document. *Counterparts may be delivered in original form or by email or text message and each will be deemed to be an original.*

15. I/We acknowledge that this agreement is exclusive and binding for 5 years and that no other biosolids may be applied or that similar agreements can be entered into without any written permission from OLSTAD. I/We understand that this exclusive agreement is with OLSTAD and all lands owned, rented or otherwise are subject to this agreement with regards to any biosolids application for 5 years.

16. I/We acknowledge that if dewatered material is stockpiled on the land, it may remain on the land for up to 18 months after the completion of hauling before incorporation. OLSTAD will determine when the biosolids will be incorporated. OLSTAD is not responsible for any inconvenience or loss of revenue if stockpiles have to be farmed around.

17. I/We acknowledge that I/We have read, understand and agree with all of the provisions of this Acknowledgement and Authorization, and acknowledge that I/We have had the opportunity to obtain independent legal advice with respect to it.

APPENDIX D

MONITORING PROGRAM METAL CONCENTRATIONS

MAC – Maximum Allowable Concentration – Alberta Tier 1 guideline value.

80% of MAC – 80% or the Maximum Allowable Concentration. Used for monitoring purposes only as an indication of potential environmental concerns related to application of biosolids to agricultural lands.

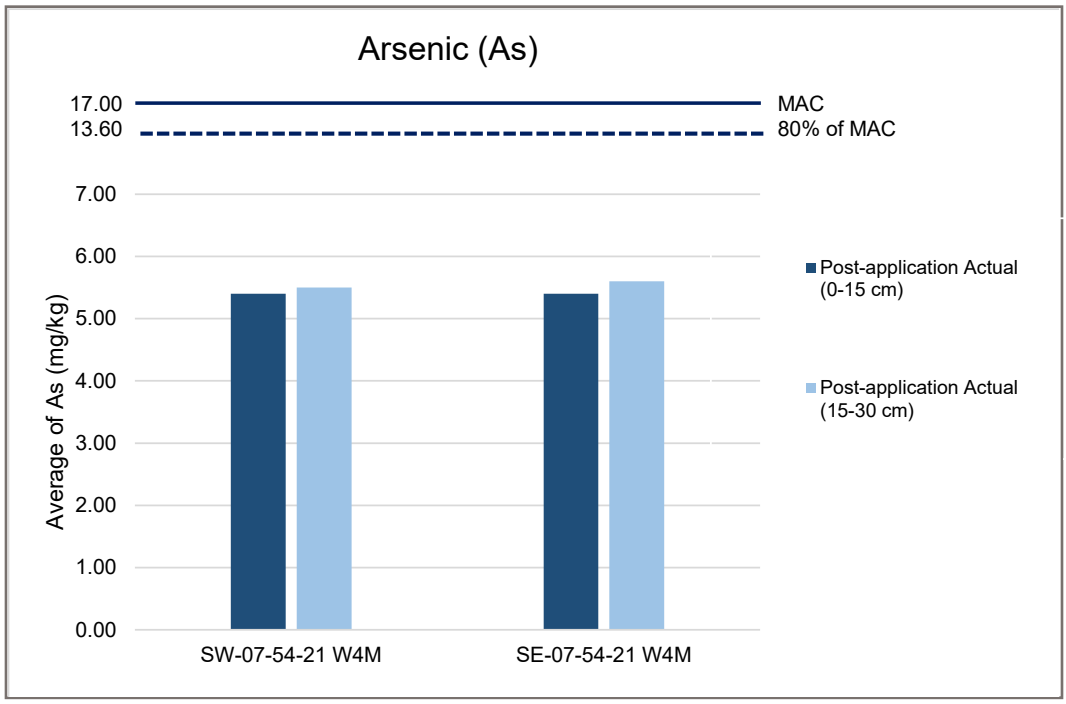

Figure D1.As: In SW-07 and SE-07 the arsenic concentrations are well below the MAC[1] and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

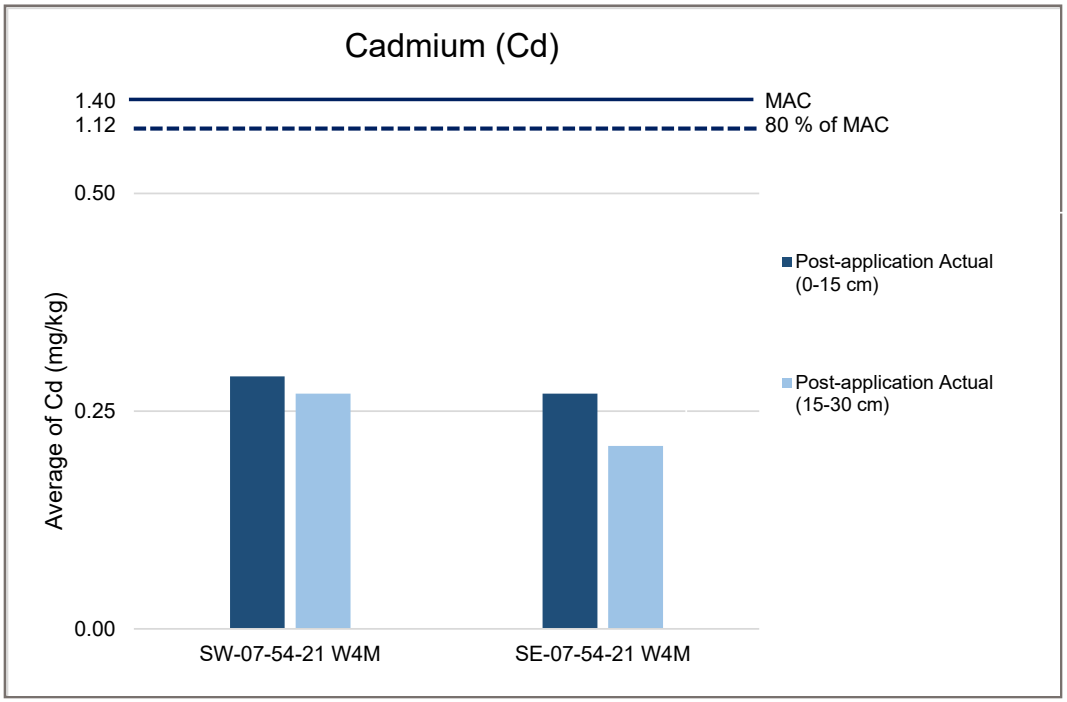

Figure D1.Cd: In SW-07 and SE-07 the cadmium concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

[1] The Alberta Tier 1 guideline value or Maximum Allowable Concentration (MAC).

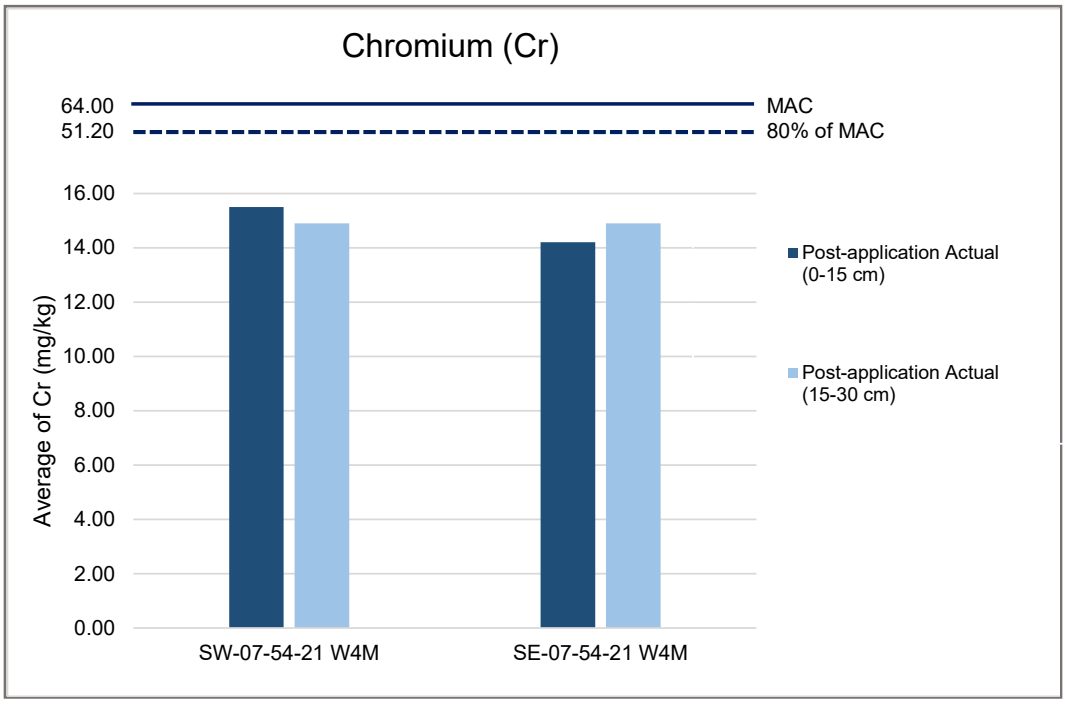

Figure D1.Cr: In SW-07 and SE-07 the chromium concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

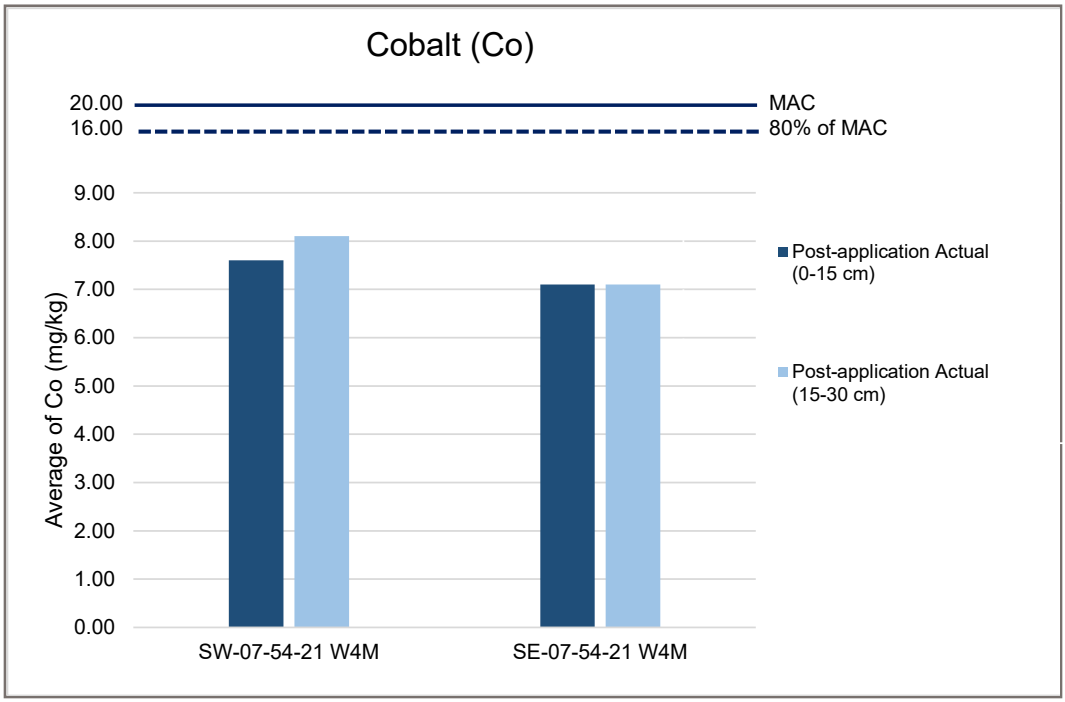

Figure D1.Co: In SW-07 and SE-07 the cobalt concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

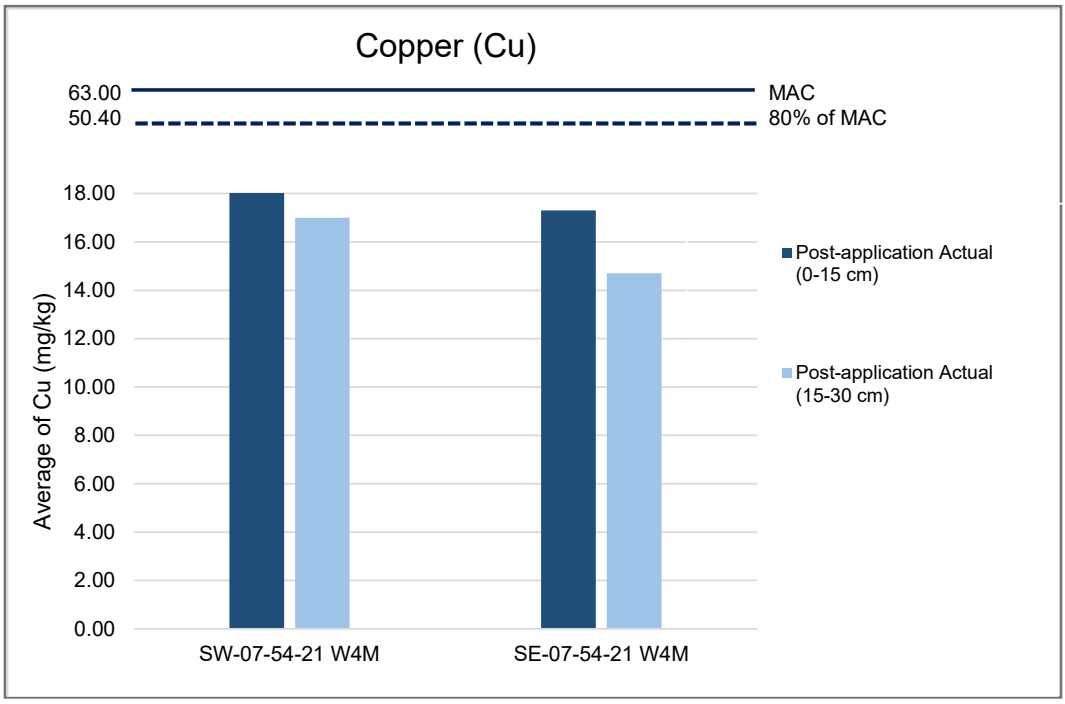

Figure D1.Cu: In SW-07 and SE-07 the copper concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

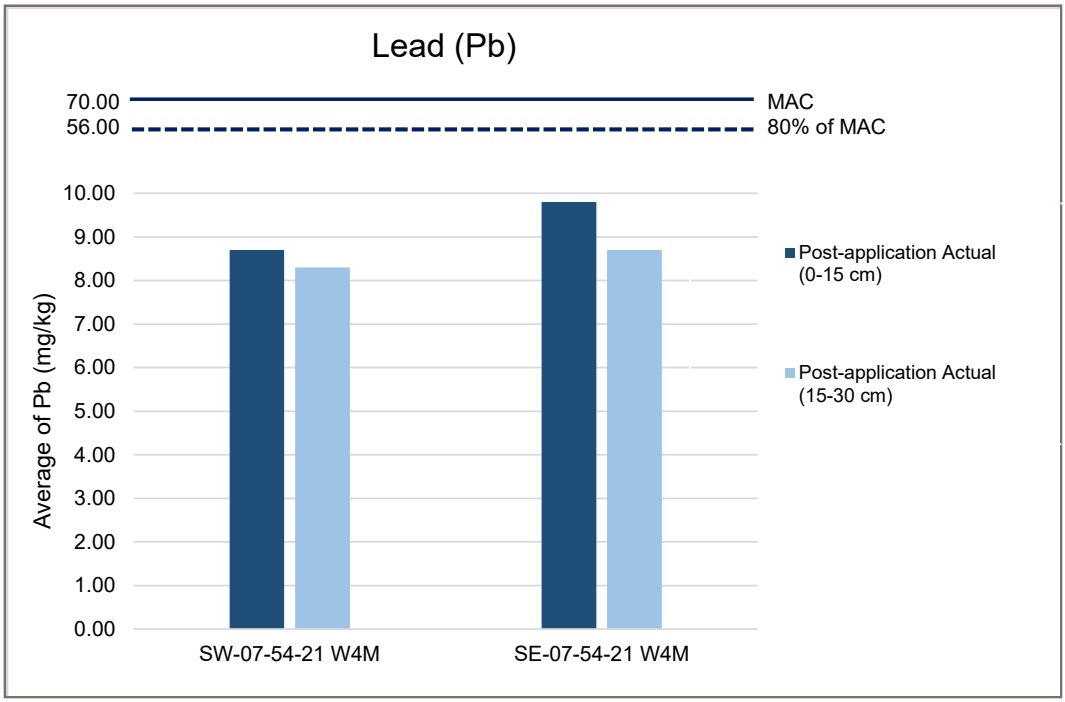

Figure D1.Pb: In SW-07 and SE-07 the lead concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

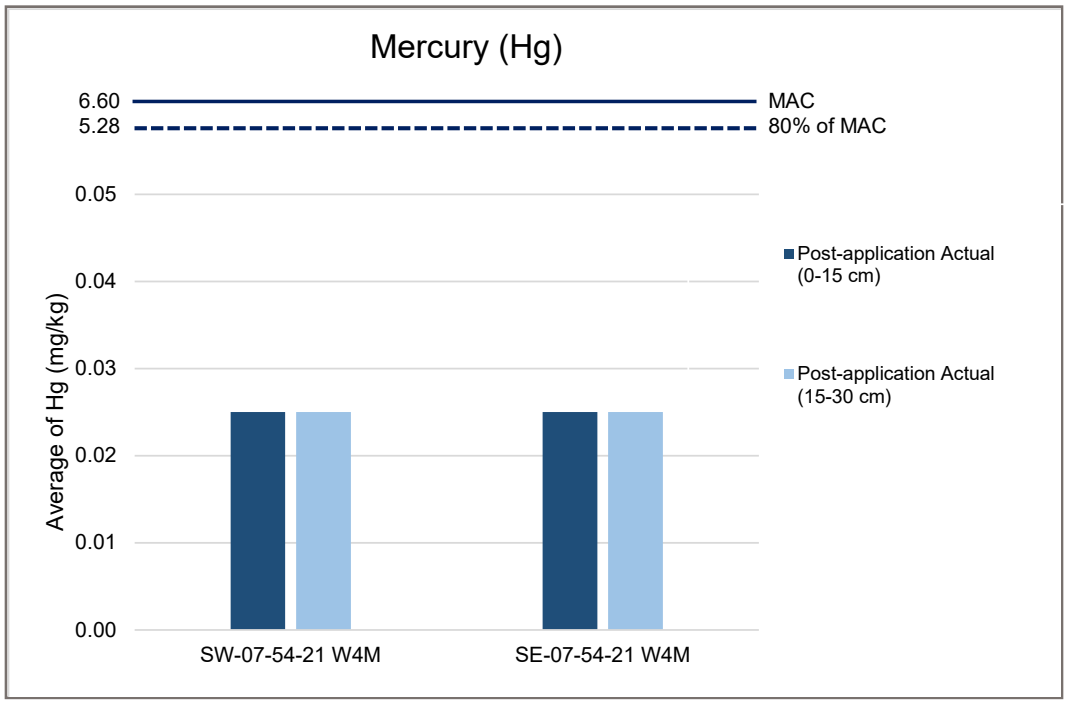

Figure D1.Hg[2]: In SW-07 and SE-07 the mercury concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

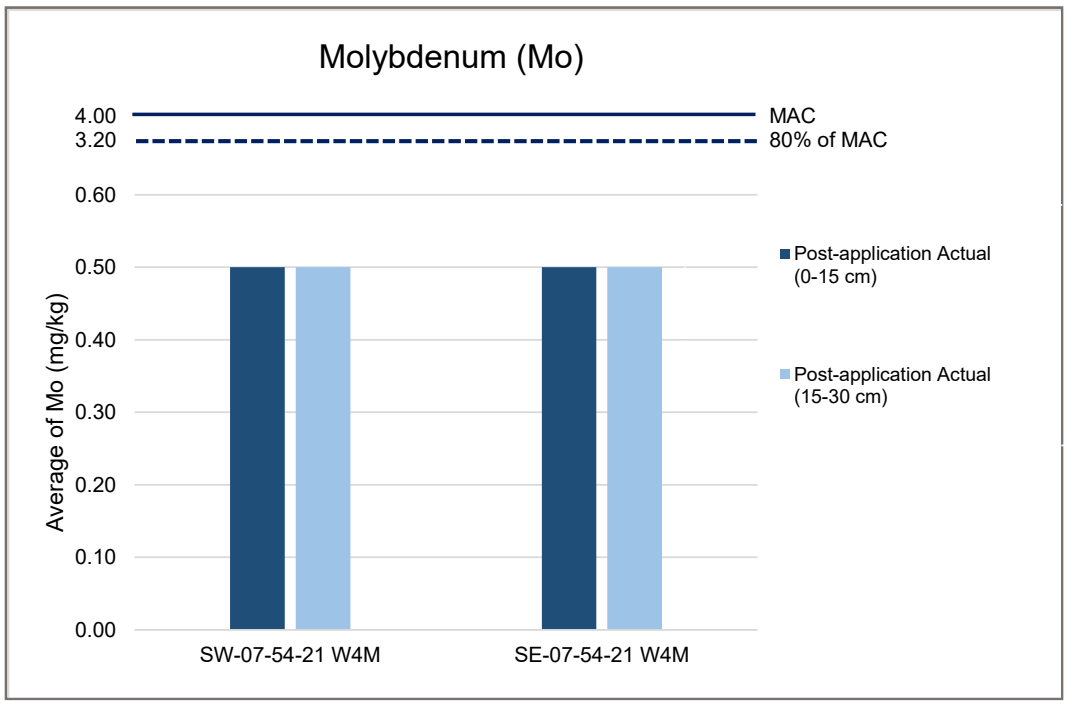

Figure D1.Mo[2]: In SW-07 and SE-07 the molybdenum concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

[2] Post application mercury and molybdenum concentrations were reported as below laboratory detection limit. Concentrations shown represent one half of the detection limit.

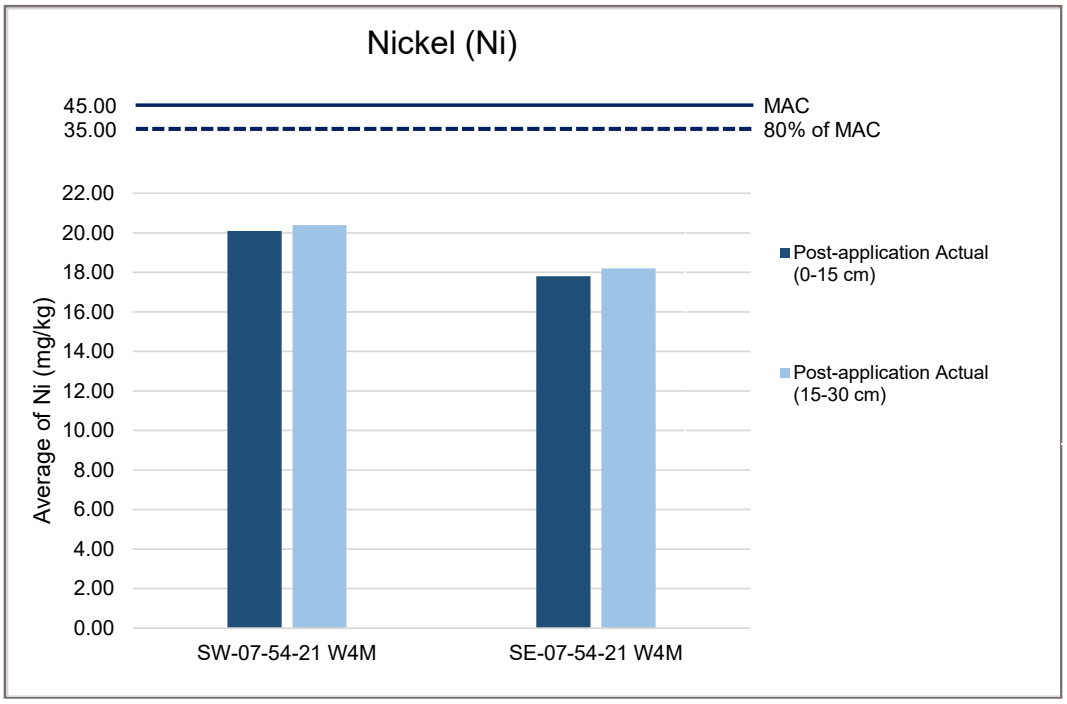

Figure D1.Ni: In SW-07 and SE-07 the nickel concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

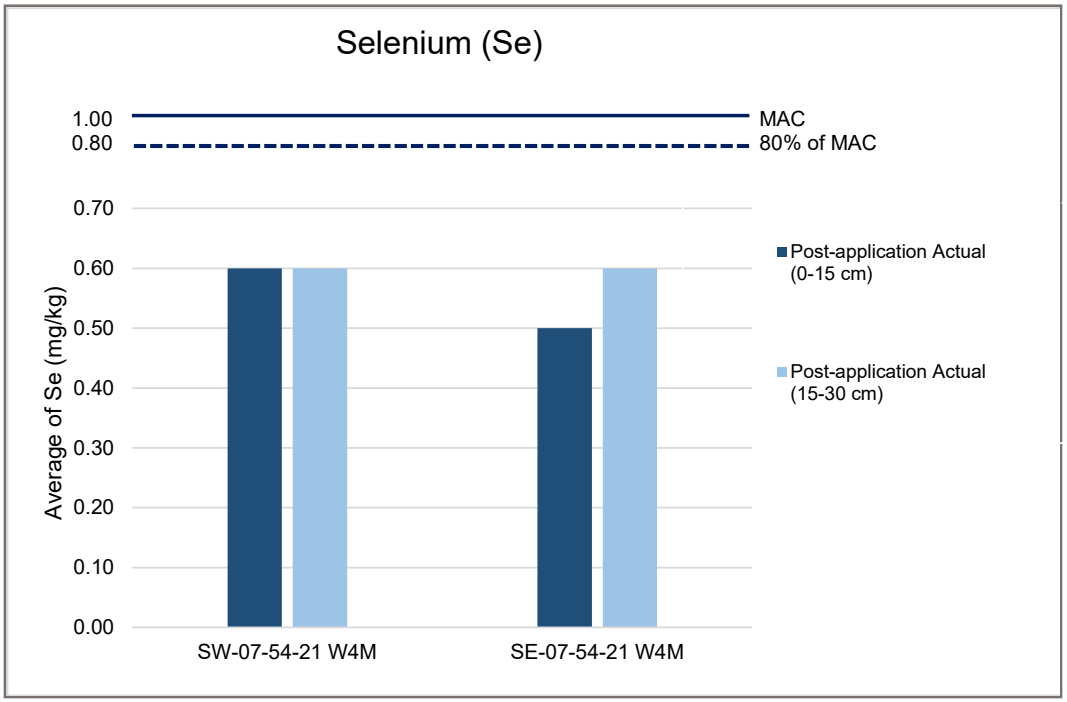

Figure D1.Se: In SW-07 and SE-07 the selenium concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

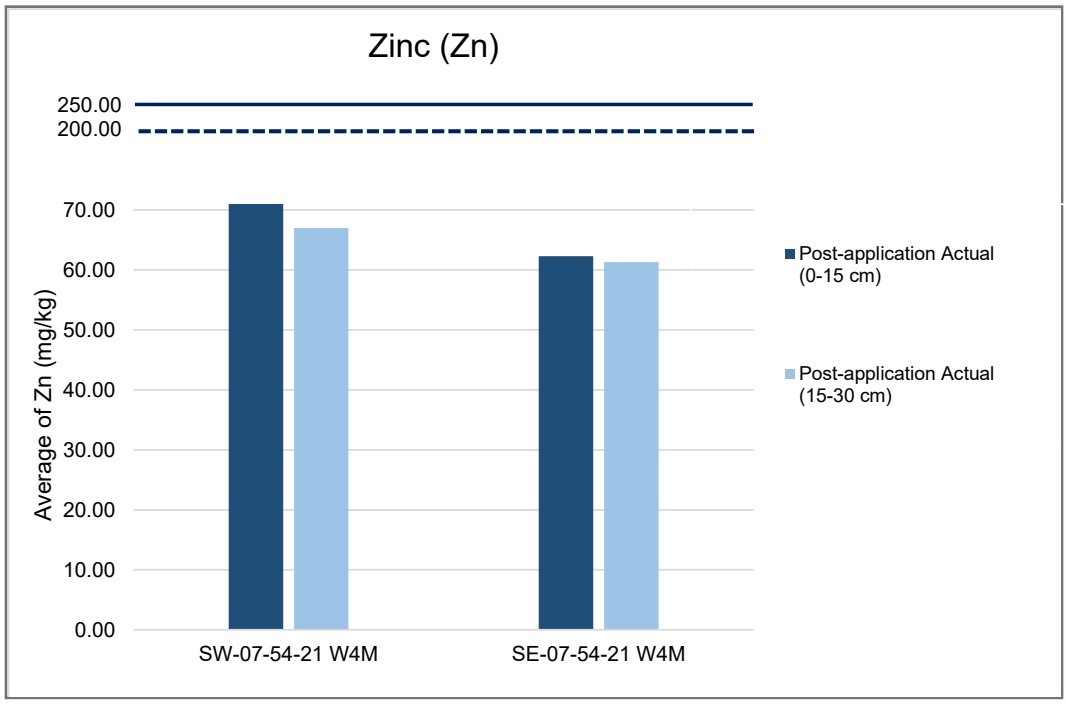

Figure D1.Zn: In SW-07 and SE-07 the zinc concentrations are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

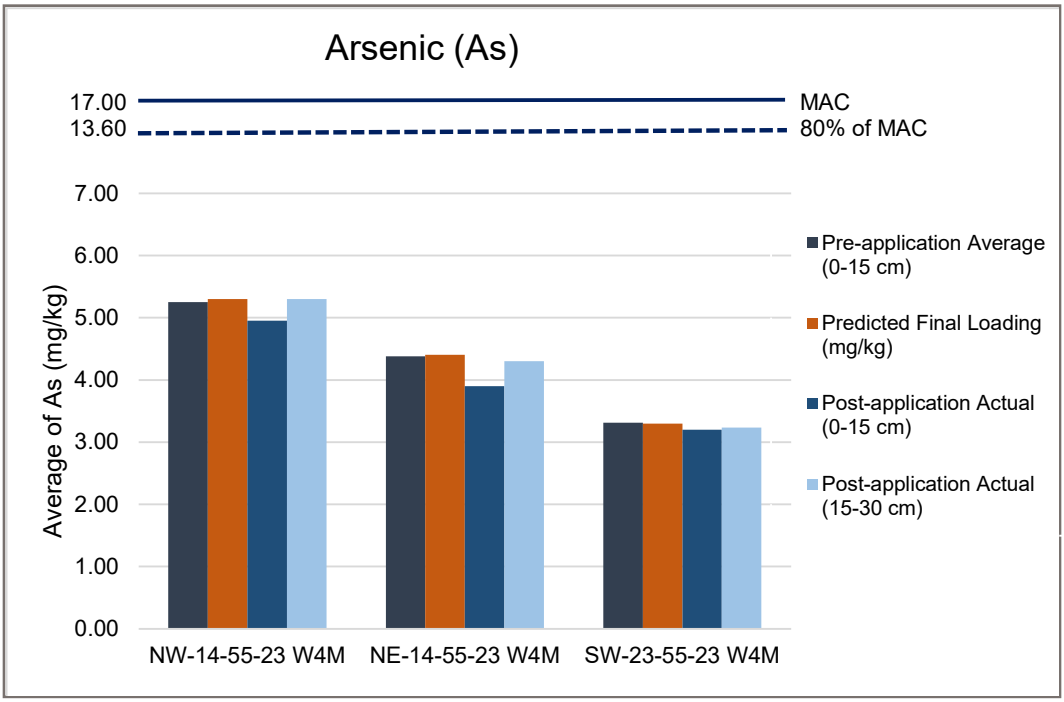

Figure D2.As: All the fields reported lower concentrations for arsenic in the 0-15 cm average after the biosolid application. Additionally, all fields reported a post-application 15-30 cm concentration that was equal to or marginally less than the predicted loading concentration. All reported values are well below the MAC and 80% of MAC thresholds.

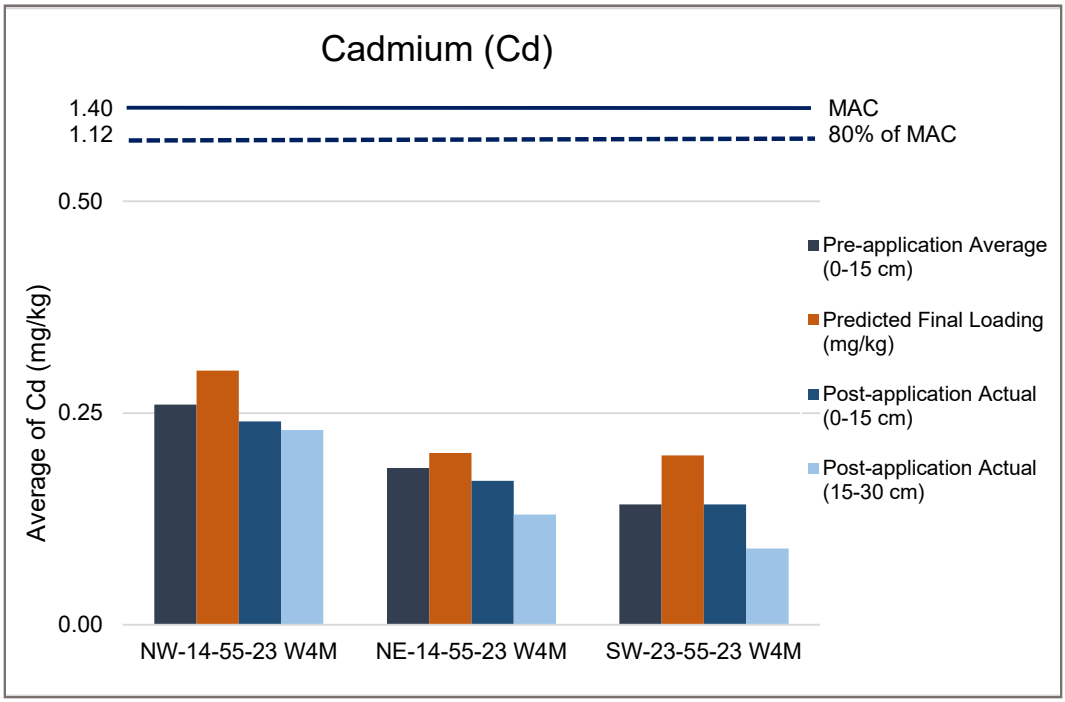

Figure D2.Cd: Overall, the predicted loading concentration of cadmium was greater than the post-application averages, all of which are well below the MAC and 80% of MAC thresholds for both the 0-15 cm and 15-30 cm depths.

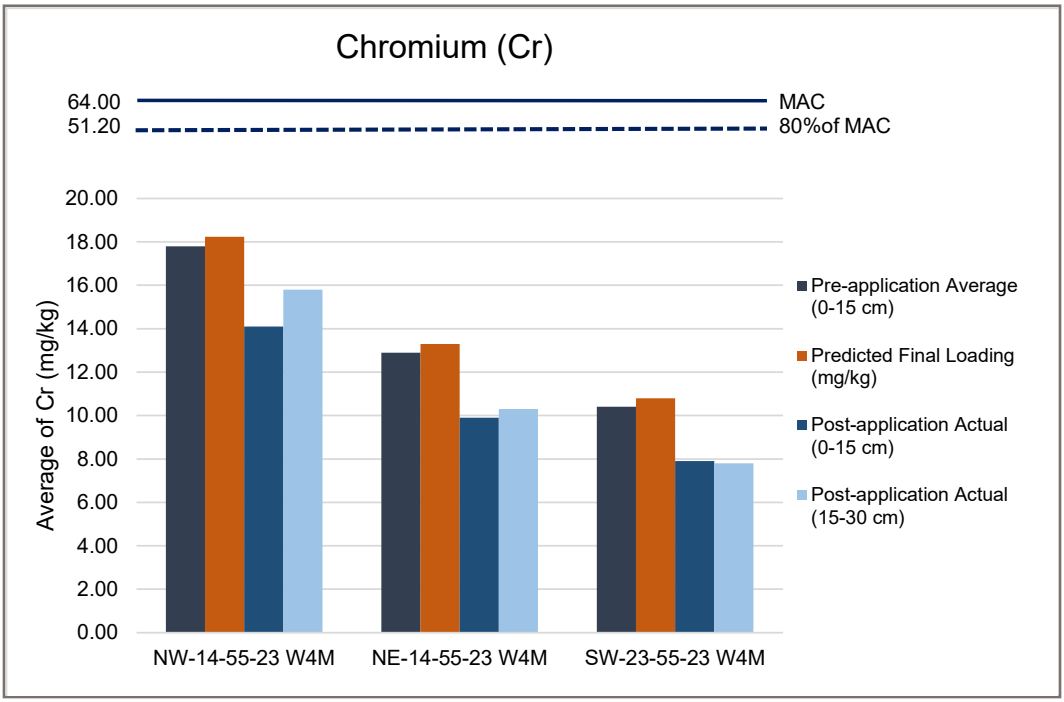

Figure D2.Cr: The 0-15 cm and 15-30 cm post application chromium concentration averages were below the pre-application and predicted loading concentrations. All reported values are well below the MAC and 80% of MAC thresholds.

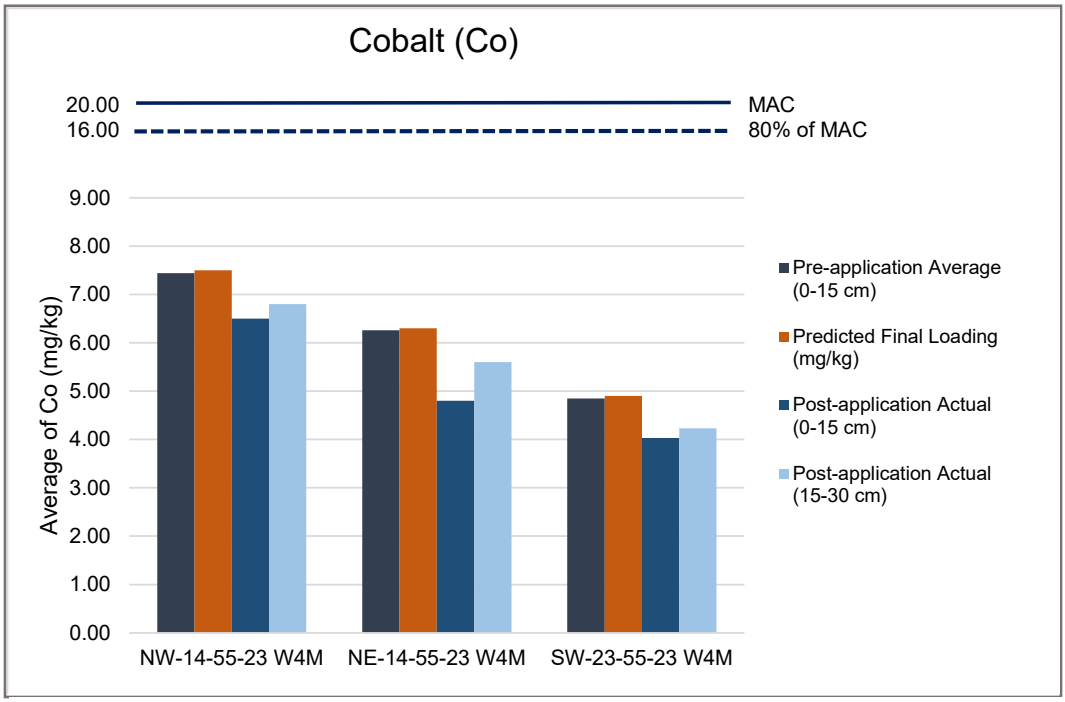

Figure D2.Co: All the fields reported lower concentrations for cobalt in the 0-15 cm averages post application. Although the post-application 15-30 cm concentration were marginally greater than the post 0-15 cm average, the concentrations were still well below the predicted loading. All reported values are well below the MAC and 80% of MAC thresholds.

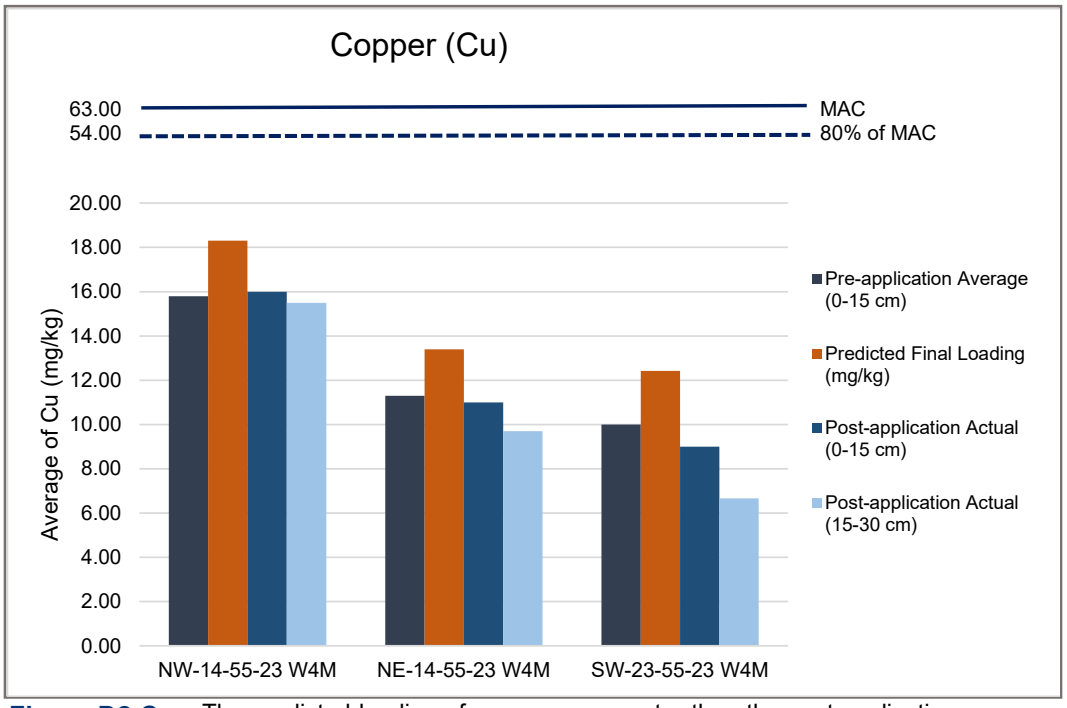

Figure D2.Cu: The predicted loading of copper was greater than the post-application averages. NW-14 was the only field to report a post-application concentration that was marginally greater than the pre-application concentration. All reported values are well below the MAC and 80% of MAC thresholds.

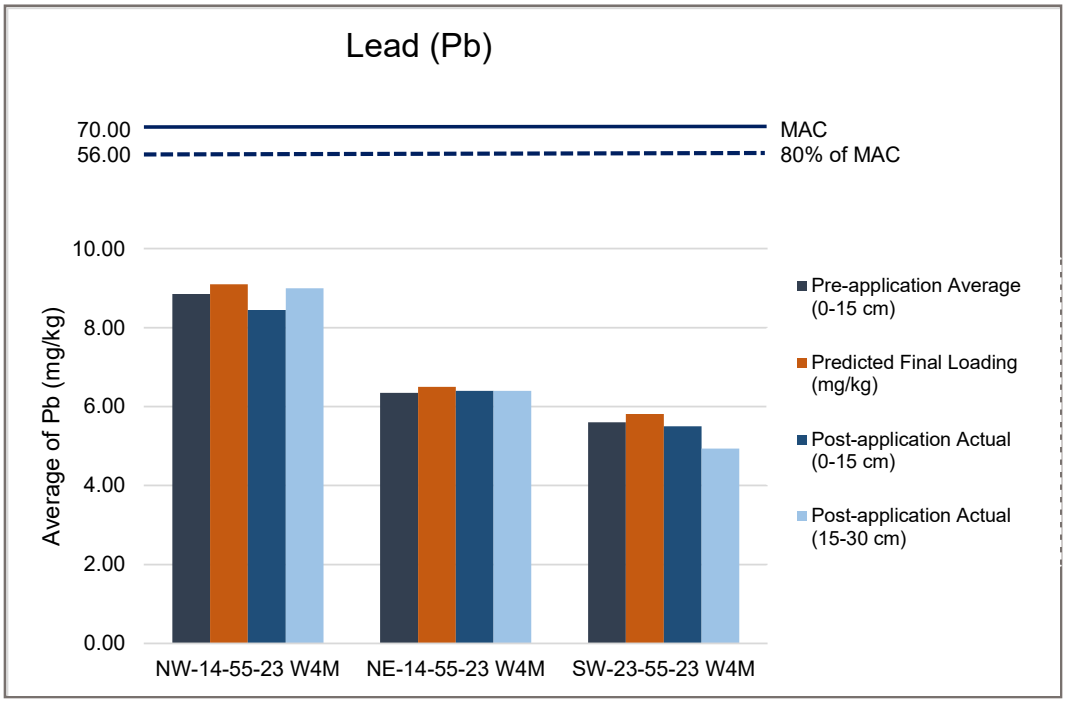

Figure D2.Pb: The predicted loading of lead was greater than the post-application averages. However, in NE-14 and SE-14, the post-application concentration in 0-15 cm was marginally greater than the pre-application concentration. All reported values are well below the MAC and 80% of MAC thresholds.

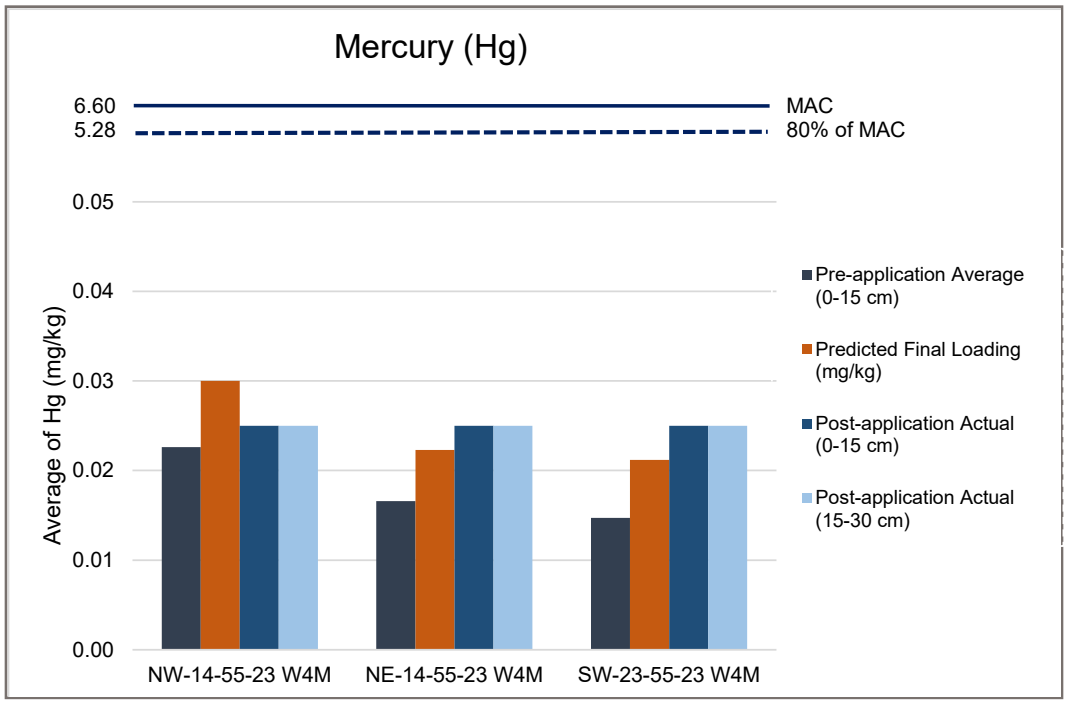

Figure D2.Hg[3]: All values reported for mercury well below the MAC and 80% of MAC thresholds.

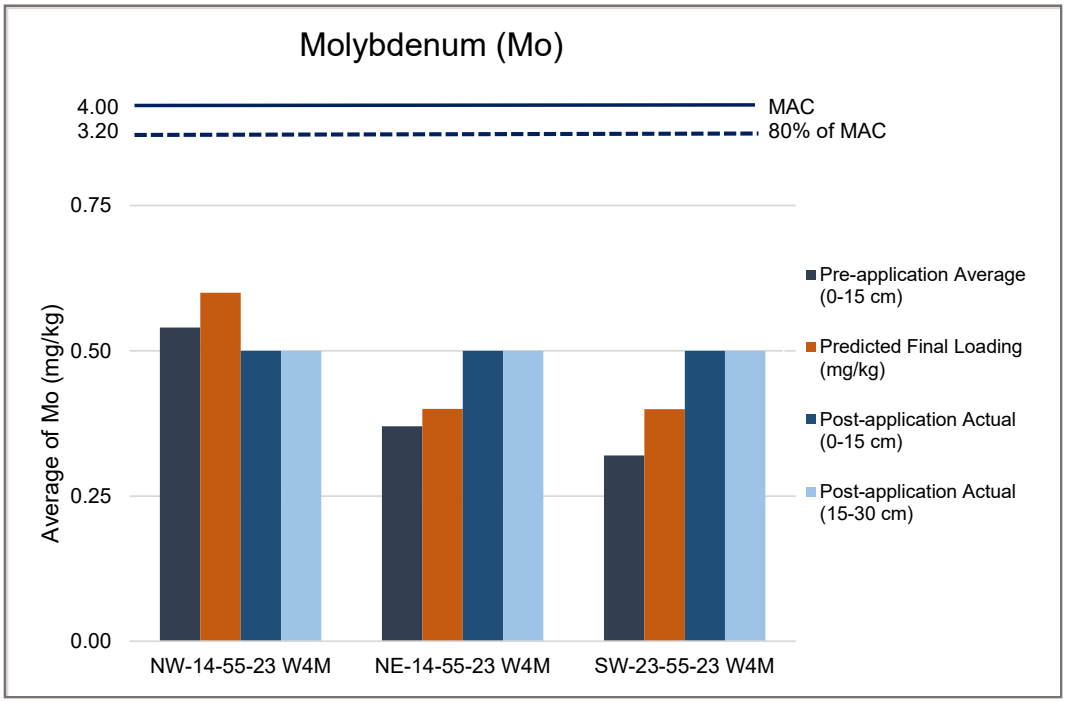

Figure D2.Mo[3]: All values reported for mercury well below the MAC and 80% of MAC thresholds.

[3] Post application mercury and molybdenum concentrations were reported as below laboratory detection limit. Concentrations shown represent one half of the detection limit.

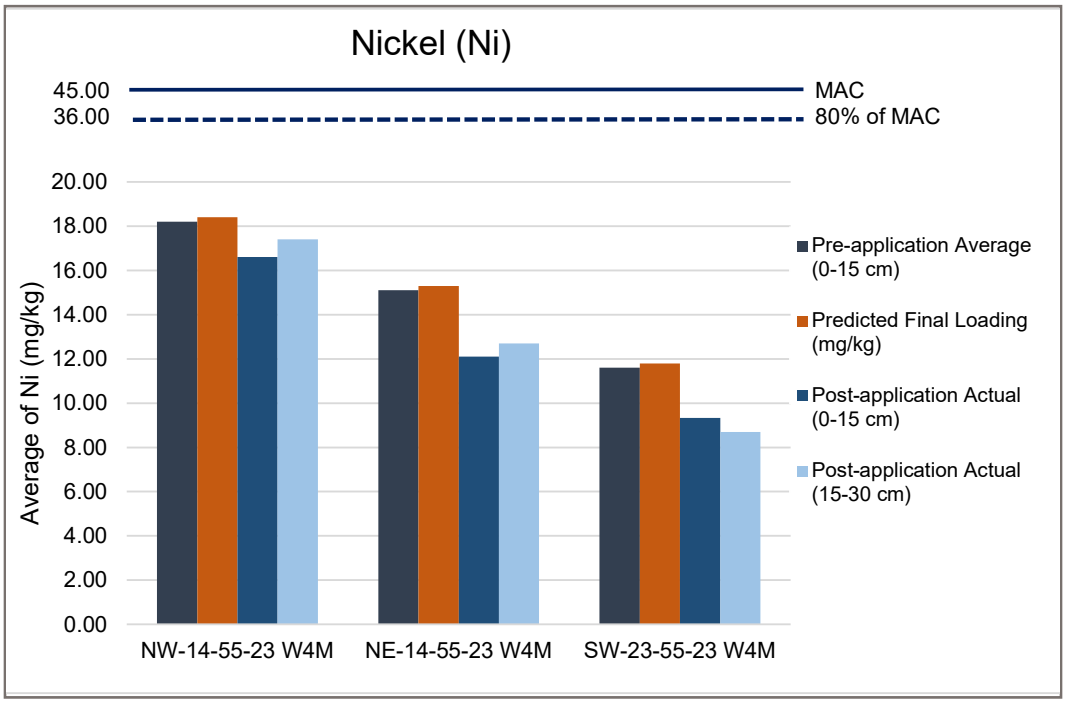

Figure D2.Ni: In all fields the 0-15 cm concentrations decreased after the biosolids application. Although, NW-14 and NE-14 post-application concentrations in 15-30 cm were greater then then the 0-15 cm values, they are below the predicted loading concentration, which is well below the MAC and 80% of MAC thresholds.

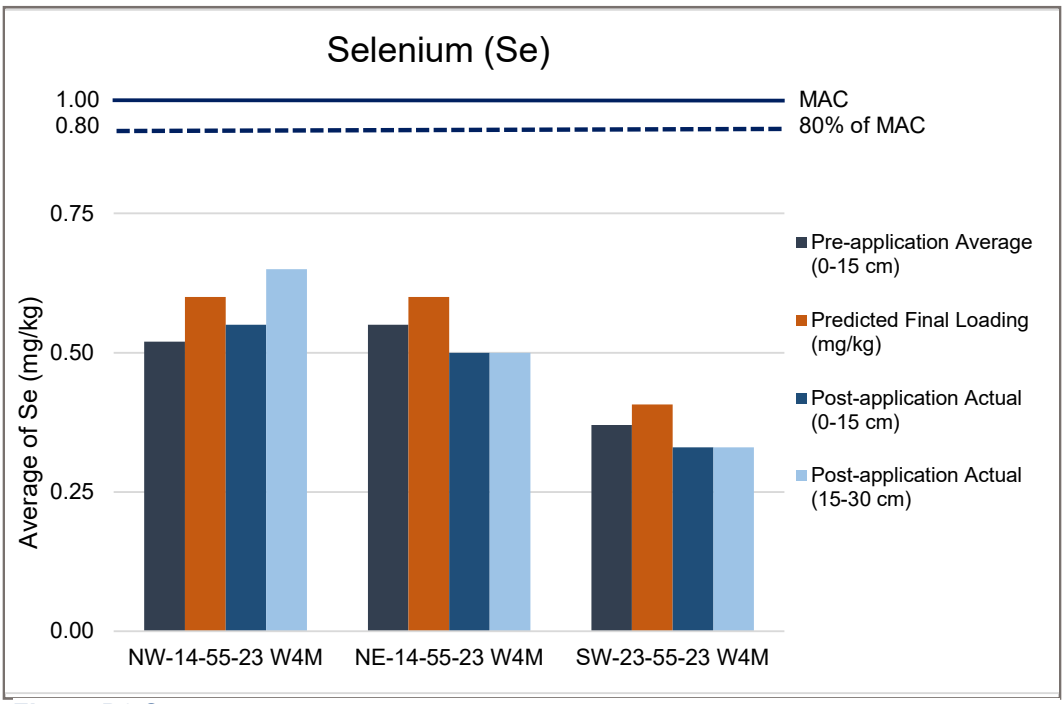

Figure D2.Se: In all fields, the post-application concentrations of selenium were less then the predicted loading concentration, except for NW-14 15-30 cm. All reported values are well below the MAC and 80% of MAC thresholds.

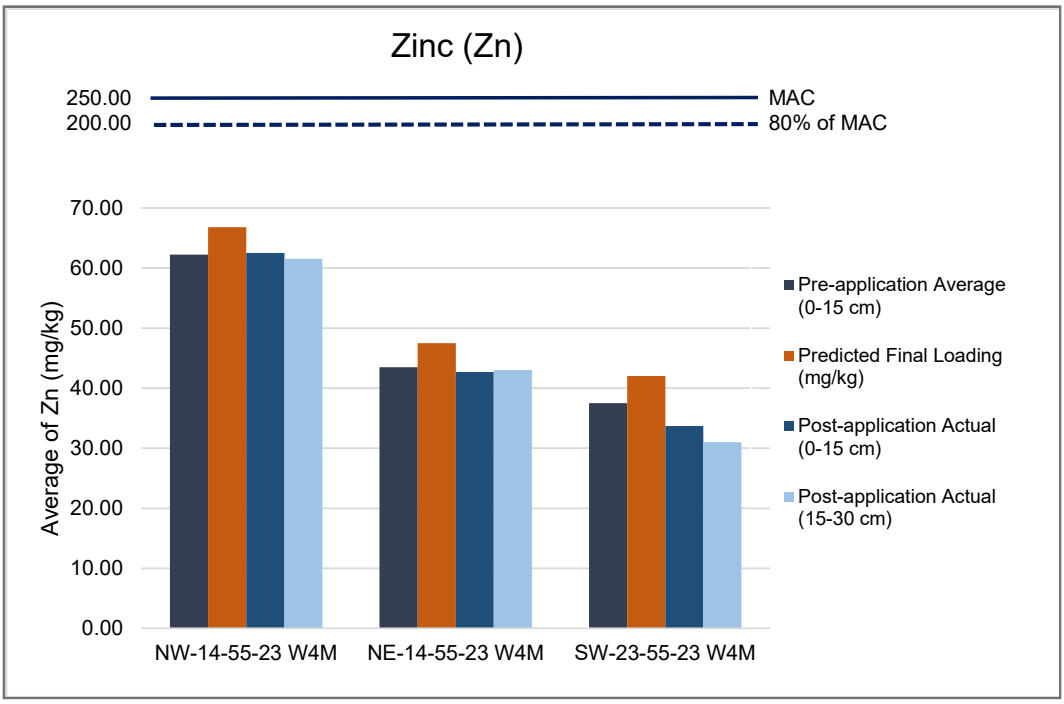

Figure D2.Zn: In all fields, the post-application concentrations of zinc are equal to or marginally less then the pre-application concentration, and all of which are well below the MAC and 80% of MAC thresholds. The application of biosolids did not result in an increase of zinc in the field.

TABLE OF CONTENTS

2024 Overview

EPCOR Water Services (EWS) provides wastewater collection (WWC) and stormwater conveyance services to City of Edmonton (the 'City') residents through the planning, construction, operating and maintenance of the pipes, tunnels, pump stations, and stormwater management facilities that make up the wastewater collection network. In 2025, EWS is realigning some of the previously established accountabilities to a functional organizational design by integrating teams to improve the experience for our employees and customers. Construction, operation and maintenance of the wastewater collection linear assets (including pipes, pump stations, lift stations, stormwater management facilities) will be supported by four functional groups:

- Linear Asset Operations: responsible for the central management and operation of the wastewater collection systems.
- Linear Asset Maintenance: responsible for maintenance and inspection activities for wastewater collection linear assets, from lift stations to stormwater facilities.
- Linear Asset Construction: execute construction activities for linear assets, including sewer repairs.
- Linear Asset Services: provide developer services, public and private inspections.

The organizational changes will be reflected in the 2025 reporting. For the 2024 report, the organizational naming reflects the previous organization structure as detailed below:

Project Management and Engineering are responsible for projects that are in the preliminary design or detailed design phase. They manage in-house engineering design, cost estimation, and drafting. Projects include new sewer infrastructure projects like tunnels, pipes, manholes, wetlands, and the coordination of sewer rehabilitation work.

WWC Construction is responsible for the in-house construction and emergency repairs on the collection systems. The rehabilitation construction team uses a wide variety of construction methods to rehabilitate the system and build for growth using open-cut and trenchless techniques. The customer construction group completes service connections, renews existing drainage assets, and completes emergency and high priority repairs.

Infrastructure like sewers and structures in the wastewater collection system require ongoing maintenance. WWC Operations — which includes pipeline maintenance, flow-control facilities, monitoring and compliance, and operations engineering — inspect and monitor the wastewater collection systems to ensure service to customers is maintained and to optimize the short-term maintenance required. They also reduce the possibility of customer sewer back-ups caused by service connection blockages and minimize disruptions to the public.

Operations are supported by a number of other groups throughout EPCOR such as Public and Governmental Affairs, Supply Chain Management, Fleet and Equipment, Facilities and Finance.

Collection and conveyance of wastewater and stormwater is carried out through the wastewater collection system which consists of sanitary and stormwater collection infrastructure.

The sanitary collection infrastructure includes more than 2,800 km of sanitary sewer, over 800 km of combined sanitary and storm sewer that connect all customers to sanitary trunk sewers. Sanitary trunks then deliver wastewater directly to the Gold Bar Wastewater Treatment Plant (WWTP).

A portion of the conveyance of wastewater is covered under a Wastewater Exchange Agreement between EPCOR and Arrow Utilities (formerly Alberta Capital Region Wastewater Commission). The Arrow Utilities Plant takes wastewater from Clareview in northeast Edmonton and from the Clover Bar Industrial Area. In exchange, the sanitary collection system conveys wastewater from the south members (City and County of Leduc, and the Town of Beaumont) for treatment at the Gold Bar WWTP.

The stormwater collection infrastructure includes over 3,300 km of storm sewer, 62,000 catch basins, and 12,800 catch basin manholes. This stormwater collection infrastructure is connected to stormwater trunk sewers. Storm trunks then discharge stormwater to natural watercourses, i.e. creeks and the North Saskatchewan River, through one of 258 outfalls. Strategically placed within the stormwater collection system are 310 stormwater management facilities which provide flood prevention, peak-flow attenuation, and treatment through stormwater retention.

Between the sanitary/combined sewer system and stormwater system there are 95 pumpstations which ensure proper servicing to EPCOR's customers in Edmonton.

EWS is fully committed to the protection of the environment and the health and safety of its employees, customers and neighbors. Health and safety and the environment (HSE), including public health safety, is one of the top priorities of EPCOR. In order to continually improve our HSE performance, EWS operates with an integrated HSE management system that operates according to the ISO14001:2015 standard for Environment Management Systems and the ISO 45001:2014 standard for Safety Management Systems. Successful re-registration of the Integrated Management System was maintained following a re-registration audit in 2024.

As required by Approval #639-03-07, EWS is submitting the 2024 Annual Wastewater Collection System Report.

This Annual Wastewater Collection System Report submission includes: 2024 EWS Wastewater Collection system Capital Program summary, Interconnection Control Strategy Annual Report, Environmental Monitoring results, Chemical usage, and Collection System Operational details.

TABLE 1: Summary of 2024 Completed Projects and Planned Major Rehabilitation Projects

Project / Program	Completion
Drainage System Expansion	
2022 Safety Program	Feb-24
CB Relocation on YHT 107 St to Fort Rd	Oct-24

2025-2027 Large Trunk Rehabilitation	Dec-27
2025-2027 Local Sewer Rehabilitation	Dec-27
2025 Pump Station Rehabilitation	Feb-28

Interconnection Control Strategy

SUMMARY

In response to a requirement in the 1995 Approval to Operate (No. 95-MUN-117), EWS prepared an Interconnection Control Strategy. Through this Strategy, EPCOR embarked on its mitigation and monitoring program in the context of “perpetual monitoring and assessment” (Figure 1).

An interconnection is designed to allow sanitary or combined sewage to overflow into the storm system, in order to relieve the sewer system under high flow conditions. Since 1998, a program has been in place to minimize the contamination of stormwater with sanitary sewage by monitoring, assessing and eliminating or mitigating all interconnections between the two systems. This will reduce the total loading of contaminants to the North Saskatchewan River.

Under the current Approval (639-03-07), issued in 2021, EPCOR intends to continue with the existing processes and reporting through the Wastewater System Operations Plan. This report presents summaries of: status and mitigation activities for known and newly discovered interconnections (I/Cs); results of the 2024 monitoring program; and status of the Interconnection Rectification Assessment project.

Interconnection Status

During 2024, 7 interconnections were discovered, and none were closed. The I/C count for December 31, 2024 stands at 124 open I/Cs and 289 corrected sites (total 413).

Interconnection Monitoring

As of December 31, 2024, 113 of the 124 open I/Cs had monitoring devices. Three dry weather overflows (DWO) were discovered in 2024.

Interconnection Rectification Assessment Project

Two consultants were hired in 2002 and 2003 to carry out the rectification assessment of about 90 and 40 sites, respectively. Their work focused mainly on active I/Cs and I/Cs with DWOs. Previous studies and monitoring data were utilized to quantify I/Cs activity, support sewer system assessment, and provide conceptual and preliminary design for remedial works. These assessment studies were completed in 2004 and EPCOR has been following up with the recommended mitigation work since. New focused, detailed assessment projects are ongoing as rectification projects are defined.

1.0 INTRODUCTION

An Interconnection Control Strategy was prepared by EPCOR in response to a requirement by Alberta Environment, as part of the 1995 Approval. This program to minimize the contamination of stormwater by sanitary sewage, has been in effect since 1998.

A key commitment of the Interconnection Control Strategy is perpetual monitoring and assessment for all unmitigated interconnections (see Figure 1). This consists of identification, maintenance of data, evaluation, monitoring, correction, elimination and mitigation.

The focus of interconnection monitoring activities is to collect information on the frequency and duration of discharges from all interconnection (I/C) sites. The evaluation of the data for all sites is the core component of the assessment. All sites are to be evaluated annually for further action. More detailed monitoring will be conducted at highly active sites. Corrective measures will be

taken at inactive sites or active sites where sufficient data has been collected and analyzed indicating that they can be safely closed. Monitoring information will be used as the basis for decisions in terms of remedial activity.

As part of the current Approval (639-03-07) issued in 2021, the *Interconnection Identification and Control Strategy* is continuing to be a component of the *Wastewater Collection System Operations Plan*. The *Wastewater Collection System Monitoring Protocol* includes the collection of overflow data from open (active) interconnection sites. This Protocol was submitted to Alberta Environment in 2007 and has been maintained since.

Through the *Wastewater Collection System Operations Plan*, EPCOR has committed to continue with the Interconnection Control Strategy and annual reporting of the I/C status by February 28 of each year. The intent of the annual report is to document changes and status of the I/Cs, including any corrections or closures, and to provide an updated I/C database. The following documents the I/C status for 2024.

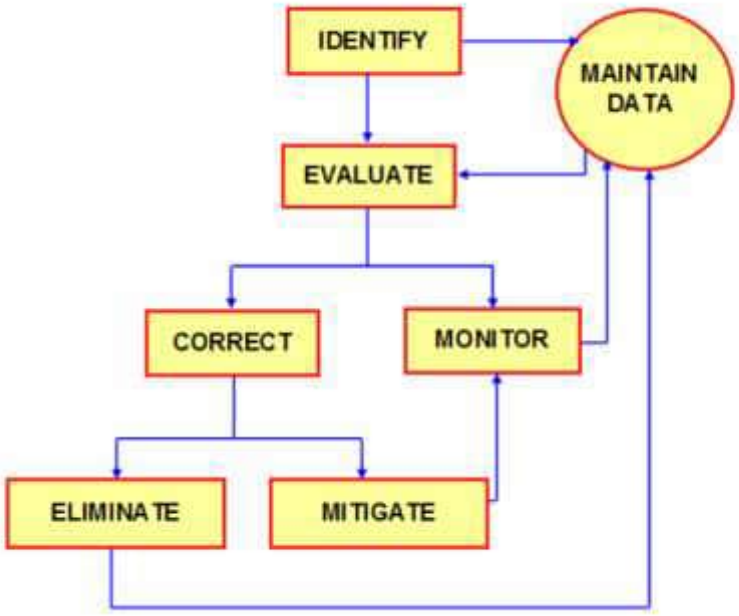

Figure 1 Interconnection Control Strategy Perpetual Monitoring and Assessment

2.0 MITIGATION MEASURES

On December 31, 2024 there were a total of 413 I/Cs. This consisted of 124 open I/Cs and 289 corrected (closed) I/Cs. In 2024, 2 previously closed interconnections were found open and 7 new interconnections were discovered. No I/Cs were closed.

The enclosed plan “2024 Status and DWO Locations” shows the locations of all of the open I/Cs in the city. A database of I/C sites is also included. Figure 2 shows the cumulative number of I/Cs over time.

Figure 2 Cumulative Number of Interconnections

2.1 CONSTRUCTION

The mitigation measures undertaken in 2024 include:

- Completion of the Queen Mary Park, Oliver, and Ritchie Neighborhood interconnection project, which investigated the potential closure of I/Cs in the area. Work started on the I/Cs that were recommended to be closed.

3.0 MONITORING AND ASSESSMENT RESULTS

In 2024, a capital project was created to purchase and install new loggers. Prior to 2024, a third-party contractor was responsible for data acquisition. This became EPCOR's responsibility when the new loggers were installed.

Benefits to upgrading the loggers include;

- Increased battery life which reduces the number of field visits
- Data goes directly into the EPCOR system which allows for improved control and monitoring of the data acquisition process
- Logger status (such as battery and signal strength) is monitored remotely and regularly checked, which allows issues to be identified earlier and improves asset management
- The site visits that were completed as a result of this effort helped improve knowledge regarding the I/Cs and expand the information in the database
- The same capital project was also used to purchase sensors for the newly discovered I/Cs as well as replacement of malfunctioning sensors.

A new protocol was developed and implemented where an automated message is sent when an I/C records wet (indicating a potential overflow). This triggers a manual review process which includes checking rainfall as well as previous work requests and history of false alarms. Through the investigation process, all information is recorded in a database, which helps to build a well-defined history for each location. The rectification studies in the past can also provide crucial insight and information regarding an I/C location. Both of these data sources can be used to inform future management and operational decisions.

This additional information as well as the logger data provides a clear picture on the status of the I/C station that can be used to quickly diagnose and fix issues.

3.1 DRY WEATHER OVERFLOWS (DWOS)

In 2024, 63 investigations of possibly overflowing sites were made with 3 Dry Weather Overflows discovered. These were reported to AEPA upon discovery.

3.2 INTERCONNECTION SITE ACTIVITY CHARACTERISTICS SUMMARY

As shown in Table 1 below, about 3% of the sites were found to have dry weather overflows each year during monitoring from 1997 to 2021, with an average of 1% over the past 5 years. These events are critical to the environment. Although only 1% of the sites experience dry weather overflow in a given year, overflows occur at different sites each year.

Table A: Interconnection Site Activity Characteristics Summary

Year	Known I/C Sites	I/C Sites Monitored	Dry Weather Overflow	Rainfall Correlated	Inactive Sites	Unverified Overflows
1997	186	182	N/A	65	109	8
1998	188	179	3	72	64	43

Average	**142**	**128**	**3**	**37**	**82**	**26**
Proportion of Monitored Sites			**2.6%**	**29%**	**64%**	**20%**

4.0 RECTIFICATION ASSESSMENT PROJECT SUMMARY

Two consultants were hired in 2002 and 2003 to carry out the second phase of a large-scale Interconnection Rectification Assessment project. The first project included about 90 I/C sites and the second included about 40 sites. Their work was focused mainly on active and DWO I/Cs. This work identified many I/Cs that could be closed if funds are available.

Previous studies and monitoring data collected between 1998 and 2003 were utilized to quantify interconnection activity, support sewer system assessment, and provide conceptual and preliminary design for remedial works. Major work requirements for this rectification assessment included:

- Perform sewer system data collection and field surveys
- Carry out sewer condition and hydraulic assessment
- Evaluate various remedial measures
- Develop conceptual and preliminary design plans
- Provide Cost estimates

A computer model called MOUSE (Model For Urban Sewers) developed by DHI (Danish Hydraulics Institute) was employed in these studies to simulate the existing system and recommend remedial measures under various wet weather flow conditions. Simulation results such as hydraulic grade line and by-pass volume were summarized and evaluated to ensure that an improved level of control can be achieved, and that proposed improvements would not cause other system problems.

These two assessment projects were completed in 2004 and we have been following up with construction of the recommended mitigation works since that time. The assessments identified a long list of construction works that will absorb the funding for the next several years. New assessment projects will commence once this construction is largely complete.

In 2018, a review of select neighborhoods was done in addition to the rectification detailed design works. Further recommendations for interconnection closure work has been developed beyond the conceptual design phase. EPCOR will evaluate these recommendations alongside infrastructure plans of other programs such as neighborhood rehab and the Stormwater Integrated Resource Plan (SIRP).

Storm and CSO Volumes and Loadings

This section is submitted in compliance with Section 4.4.10 and 6.3.3 of the Approval No. 639-03-06 for the one year period ending December 31, 2024. The monthly volumes discharged to the North Saskatchewan River (NSR) are indicated in Figures 1 and 2 for the following locations:

- 30 Avenue Storm Outfall
- Groat Road Storm Outfall
- Quesnell Storm Outfall
- Kennedale Storm Outfall
- Rat Creek CSO
- Highlands CSO
- Capilano CSO
- Cromdale CSO
- Strathearn CSO

Estimated and measured storms volumes are indicated on Figure 3. Monitored CSO volumes are indicated on Figure 4. A tabular summary of the flow volumes and estimations of total monthly volumes discharged is also included (Table 2). Of the sites reported, the storm and combined system contributed 99.9% and 0.1% of the volume, respectively.

The total (measured and estimated) flow volume discharged from the storm sewer system to the NSR and tributaries in 2024 was 125.8 million m^3, a 20.3% decrease compared to the 2023 volume of 151.3 million m^3. This decrease is due to 2024 being a drier year compared to 2023. The 2024 flow volumes from the 30th Avenue, Groat Road, Quesnell, and Kennedale storm outfalls were 5.8, 2.9, 13.1, and 7.6 million m^3, respectively. The volume of flows from Mill Creek was 15.2 million m^3.

For the combined sewer system, the total CSO flow volume discharged to the NSR in 2024 was 223,833 m^3, a 279 % decrease compared to the 2023 volume of 608,473 m^3. This large decrease is due to 2024 being a drier year than 2023. The 2023 flow volumes from the Rat Creek, Highlands, Capilano, Cromdale, and Strathearn CSOs, were 95,060; 52,932; 12,545; 70; and 4 m^3, respectively.

Water quality samples were obtained for the majority of the significant discharge events during the year. As well, a total of 90 dry-weather (baseflow) water quality samples were obtained from the storm sewer system. Table 3 provides a tabular summary of calculated flow-weighted mean monthly and annual concentrations for different constituents and the number of events sampled for water quality analysis.

In accordance with our Approval requirements, total monthly loadings to the North Saskatchewan River have been calculated for the above sites. Summaries of measured loads and estimated total loads for the City of Edmonton's storm and combined sewer system are included in Table 4. The reported loads were calculated using daily constituent concentrations, including storm sewer baseflow data, and the measured or estimated flow volumes. The sum of storm and CSO loading to the NSR consists of about 10,054 tonnes of total suspended solids (TSS), 1,353 tonnes of biochemical oxygen demand (BOD), 55 tonnes of total phosphorous (TP), 119 tonnes of nitrite and nitrate ($NO_2 + NO_3$), 56 tonnes of ammonia (NH_3), 238 tonnes of total Kjeldahl nitrogen (TKN), 19,777 tonnes of chloride and 10,085 x 10^{12} MPN of *E. coli*. Summaries of the Rat Creek CSO concentration statistics are shown in Table 5.

Note: [1]Measured Storm flows are actual flow volumes measured from Storm outfalls: 30th Ave, Quesnell, Groat Road, Kennedale Storm/STS/Wetland, Belgravia, Mill Creek.

[2]Measured CSO flows are actual flow volumes measured from CSOs: Rat Creek, Capilano, Highlands, Cromdale, and Strathearn.

[3]Unmonitored flow volumes include estimates from monitored sites when measurements not available in addition to other remaining sites.

FWC (mg/L) = Flow weighted concentration = 1000 x Constituent load (kg) / Volume (m3) per site for a monthly or annual period

Concentrations for unsampled flows were estimated or interpolated

No. of samples includes wet-weather and baseflow sampling. QA/QC samples not included in totals.

'-' - Concentration could not be calculated due to no flow present.

Note: Number of samples might not equal to number of CSO events due to sampler malfunction and extended sampling event.

TABLE 6: List of Certified Wastewater Collection System Operators

Certified Wastewater Collection System Operators per Level of WWC Certification:

(1) Operators Level IV WWC Certified
(9) Operators Level III WWC Certified
(49) Operators Level II WWC Certified
(49) Operators Level I WWC Certified

Name	Title	WWC Certification Level
Fechner, Frank	Operations Engineer	IV
Bertin, Wendy	Engineering Technologist	III
Charrupi, Carlos	Maintenance Repairman I	III
Gunderson, John	Engineering Technologist	III
Hao, Yufu (Owen)	Industrial Wastewater Inspection Coordinator	III
L'Heureux, Robin	Engineering Technologist	III
Lukenbill, Durward (Dylan)	Tradesman (Millwright 2)	III
McConnell, Peter	Drainage System Network Operator	III
Murphy, Steven	Drainage System Combo Operator	III
Powell, Ryan	Tradesman (Millwright 2)	III
Ambrosio, Jeffrey	Sewer Substructure Inspector	II
Aniskou, Evgeni	Engineering Technologist	II
Bishop, Shawn	Labour Foreman 3	II
Bourgeois, Marshall	Tradesman (Millwright)	II
Bronca, Robert	Labour Foreman 3	II
Brownoff, Nicholas	Tradesman (Millwright 2)	II
Coburn, Arthur	Drainage System Troubleman	II
Cuglietta, Carmine	Labour Foreman 3	II
Dowds, Alexander	Drainage System Combo Operator	II
Ewing, Nicole	Engineering Technologist	II
Fehr, Brittany	Engineering Technologist	II
Ferenac, Nikola	Labour Foreman 3	II
Fraser, Gordon	Labourer 2	II
Gawreletz, Kevin	Drainage System Troubleman	II
Goodine, John	Tradesman (Millwright 2)	II
Goonewardane, Anton	Equipment Operator 3	II
Guidoccio, Natalino	Drainage System Serviceman	II
Guidoccio, Nicholas	Labourer 3	II
Hammond, Richard	Drainage System Combo Operator	II
Hogan, Alex	Industrial Wastewater Technologist	II
Lahaie, Ryan	Tradesman (Millwright)	II

Lawson, Linsey	Engineering Technologist	II
Ledl, Ryan	Industrial Wastewater Investigator	II
Lirazan, Warren	Drainage System Combo Operator	II
Macrury, Robert	Drainage System Troubleman	II
Manao, Manuel	Sewer Substructure Inspector	II
McKay, Brandy	Engineering Technologist	II
Miller, Wade	Tradesman (Millwright 2)	II
Montague, Thomas (Ian)	Labour Foreman 3	II
Nelson, Tim	Manager, Environmental Investigators	II
Osuch, Oskar	Maintenance Repairman I	II
Persaud, Shawna	Equipment Operator 3	II
Pinder, Cristan	Industrial Wastewater Investigator	II
Purcell, Graham	Drainage System MTV Operator	II
Rivard, Shaune	Drainage System Troubleman	II
Samarasinghe, Kalutota	Labourer 2	II
Santrau, Alex	Tradesman (Millwright)	II
Schlacht, Shawn	Labour Foreman 3	II
Sedurante, Benjamin	Drainage System Troubleman	II
Sigstad, Sheridan Lane	Tradesman (Millwright 2)	II
Shang, Michael	Drainage System Serviceman	II
Slonetzky, Tyler	Sewer Substructure Inspector	II
Soni, Rohit	Planner (FCF Maintenance)	II
Sorenson, Melvin	Labour Foreman 1	II
To, Alan	Labourer 2	II
Trahan, Tessa	Environmental Specialist	II
Underhay, Dominic	Drainage System Combo Operator	II
Webster, Kenneth	Labour Foreman 3	II
Yang, Guang	Drainage System Combo Operator	II
Aspden, Kate	Engineering Technologist	I
Bandaralage, Upul Pe	Drainage System Combo Operator	I
Banister, Daniel	Industrial Wastewater Investigator	I
Barthel, Scott	Labourer 3	I
Bennet, Jay	Drainage System Serviceman	I
Bolz, Melissa	Labourer 2	I
Bracha, Terra	Maintenance Repairman I	I
Braunig, Alex	Drainage System MTV Operator	I

Buck, Kerri	Engineering Technologist	I
Burk, Bradley	Labourer 3	I
Burns, Russel	Drainage System Combo Operator	I
Buhay, Christopher	Labourer 2	I
Byrd, Jeff	Labourer 3	I
Byrne, Philip	Maintenance Repairman I	I
Campbell, Brent	Labour Foreman 1	I
Casella, Carmen	Labour Foreman 3	I
Dilts, Scott	Drainage System Combo Operator	I
Divino, Patrick	Drainage System Serviceman	I
Draghici, Courtney	Drainage System Combo Operator	I
Girhiny, Leah	Engineering Technologist	I
Hay, Luke	Labourer 3	I
Hyshka, Anthony	Drainage System Combo Operator	I
Khan, Murtaza	Engineering Technologist	I
Knapton, Dayna	Drainage System MTV Operator	I
Liao, Leslie	Tradesman (Millwright)	I
Lynch, Jacob	Sewer Substructure Inspector	I
Manuel, Jose	Sewer Substructure Inspector	I
Masson, Sheldon	Drainage System Combo Operator	I
McCulloch, Mitch	Labourer 3	I
McHale, Ken	Drainage System Combo Operator	I
Nakpangi, Valene	Engineering Technologist	I
Nikapitiyawithana, Amith	Labourer 3	I
Pawelec, Michal	Labourer 2	I
Rahal, Osman	Engineering Technologist	I
Rathwell, Bradley	Industrial Wastewater Investigator	I
Rosell, Brandon	Maintenance Repairman 1	I
Runco, Frank	Drainage System Combo Operator	I
Ryley, Paul	Maintenance Repairman 1	I
Sandhu, Sangram	Labourer 3	I
Sheppard, Cody	Tradesman (Millwright)	I
Silva, Daniel	Labourer 3	I
Smith, Derek	Labourer 3	I
Sterparn, Andrew	Labour Foreman 1	I
Teslak, Leanne	Industrial Wastewater Investigator	I

Trudel, Tyler	Labourer 2	I
Valentini, Marco	Maintenance Repairman 1	I
Weiss, Dallas	Labourer 3	I
Wildeboar, Christopher	Labourer 3	I
Wolfe, Brent	Drainage System Combo Operator	I

Note: The above table is the list of certified wastewater collection system operators as of December 31, 2024.

TABLE 7: 2024 Annual Product Usage at Pump Stations

The Biomaxx Canada OXYN8 solution is used for odor control at sanitary pump stations.

Pump Station	Month	Product	Total Addition (L)
PW227 Chappelle Garden	January	Biomaxx Canada OXYN8	3411
PW233 Edgemont II	January	Biomaxx Canada OXYN8	2965
PW227 Chappelle Garden	February	Biomaxx Canada OXYN8	3649
PW233 Edgemont II	February	Biomaxx Canada OXYN8	1373
PW227 Chappelle Garden	March	Biomaxx Canada OXYN8	4944
PW233 Edgemont II	March	Biomaxx Canada OXYN8	2158
PW233 Edgemont II	April	Biomaxx Canada OXYN8	2032

Total Usage - 2024 (L): 20,530

TABLE 8: 2024 Annual Usage of Reward® Herbicide

Date of Application	Stormwater Management Facility	Quantity Used (L)
28-May-24	Ambleside # 4 (3604 Allan Drive SW)	11
11-Jun-24	Paisley # 1 (3040 Paisley Green SW)	26
20-Jun-24	Blackmud Creek # 1 (9101 Blackmud Creek Crescent SW)	8
28-Jun-24	Uplands # 2 (27 Ave and 199 St NW)	8
09-Jul-24	Ambleside # 5 (1264 AINSLIE WAY SW)	15
15-Jul-24	Andorra # 1 (16922 93 St NW)	15
17-Jul-24	Belle River # 1 (8728 160 Ave NE)	8
2-Aug-24	Windermere # 11 (738 Windermere Wynd NW)	15

Total Number of Applications: 8
Total Usage (L): 106

TABLE 9: 2024 Usage of Bright Dye

The use of Bright Dye in the **Field Operations** section is related to the identification of cross-connections in the collection system. The **Monitoring & Compliance** usage supports enforcement activities associated with Drainage By-law 19627 (EPCOR) and Drainage By-Law 18093 (City of Edmonton) and investigations of industrial and commercial customers.

Date Tested	Location of Test	Department / Section	Tests per Location	Bright Dye Usage (ml)
04-Jan-24	15202-77 Avenue NW	Monitoring & Compliance	1	75
04-Jan-24	10982-141 Street NW	Monitoring & Compliance	1	25

TABLE 11: 2024 Operational Issues – Wastewater Collection

Date of Occurrence	Location	Incident Description	Type	AEPA Reference Number
04-Jan-2024	12421-48 Street NW	Untreated wastewater (approx. 1 m3) was released into a storm catch basin (MH580700) from a private RV located at (12421-48 Street NW). EPCOR equipment was mobilized to the site to remove contaminants from the catch basin. The City of Edmonton coordinated the removal of frozen sewage from around the catch basin and nearby alleyway. EPCOR Industrial Wastewater Investigators confirmed that the untreated wastewater was contained within the catch basin and there was no release into the storm collection system. This release was reported to AEPA (Ref# 424222) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	424222
07-Jan-2024	9961-170 Street NW	Untreated wastewater (approx. 7000 L) was released into the storm collection system from a private sanitary line surcharge located at a business complex (9961-170 Street NW). EPCOR equipment was mobilized to the site to clear the blockage in the sanitary line. The property manager contacted a 3rd party vacuum truck to remove contaminants from the impacted storm catch basin and surrounding area. This release was reported to AEPA (Ref# 423628) by the property manager. A written report was issued to AEPA on January 12, 2024.	Reportable-3rd Party Release	423628
09-Jan-2024	10820-140 Street NW	Sample results of the wastewater from a storm manhole (MH257508) located near 10820-140 Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 1,900,000 CFU/100 mL. The original sample was collected on January 4, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. A "Notice to Comply" will be issued to the owners of any properties that have been confirmed to have a cross-connection. The Notices will require that the owners redirect their sanitary wastewater discharge from the storm sewer to the sanitary sewer system. This release was reported to AEPA (Ref# 423666). A written report was issued to AEPA on January 16, 2024	Reportable-3rd Party Release	423666
09-Jan-2024	1066-James Crescent NW	Sample results of the wastewater from a storm manhole (MH314580) located near 1066-James Crescent NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes applicable to Storm Sewers and Watercourses" for E. coli at 210,000 CFU/100 mL. The original sample was collected on January 3, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. A "Notice to Comply" will be issued to the owners of any properties that have been confirmed to have a cross-connection. The Notices will require that the owners redirect their sanitary wastewater discharge from the storm sewer to the sanitary sewer system. This release was reported to AEPA (Ref#423654). A written report was issued to AEPA on January 16, 2024.	Reportable-3rd Party Release	423654
11-Jan-2024	134-Avenue & 41-Street NW	Sample results of the wastewater from a storm manhole (MH299386) located near 134-Avenue & 41-Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 2,200,000 CFU/100 mL. The original sample was collected on January 8, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. A "Notice to Comply" will be issued to the owners of any properties that have been confirmed to have a cross-connection. The Notices will require that the owners redirect their sanitary wastewater discharge from the storm sewer to the sanitary sewer system. This release was reported to AEPA (Ref# 423728). A written report was issued to AEPA on January 18, 2024.	Reportable-3rd Party Release	423728
12-Jan-2024	2404-51 Avenue NW	Hydraulic fluid (approx. 500 L) was released into the sanitary collection system located at DFI Piling (2404-51 Avenue NW). Absorbent material was used by the company to remove hydraulic fluid from around the floor drain where the hydraulic fluid entered the sanitary system. A 3rd party vacuum truck was called to the site to remove hydraulic fluid from the facilities oil / water interceptor. A "Notice to Comply" was issued to the company to discontinue the release of prohibited waste into the sewerage system. This release was reported to AEPA (Ref# 423767) by the company. A written report was issued to AEPA on January 18, 2024.	Reportable-3rd Party Release	423767

13-Jan-2024	11120-170 Street NW	Untreated wastewater (unknown volume) was released into the storm collection system from a private sanitary line surcharge located at a Tim Hortons restaurant (11120-170 Street NW). EPCOR equipment was mobilized to the site to clear the blockage in the sanitary line. EPCOR crews were not able to clean the impacted storm collection system at the time of this release. An MTV inspection confirmed a partial collapse of the sanitary line. A construction dig-up work order was created as a high priority repair. EPCOR will complete inspections of upstream businesses to ensure pre-treatment systems are in proper working order and are adequately maintained. EPCOR may engage in compliance activity under the authority of Bylaw 19627 based on inspection findings to prevent a reoccurrence. This release was reported to AEPA (Ref# 423822). A written report was issued to AEPA on January 19, 2024.	Reportable-3rd Party Release	423822
25-Jan-2024	3211-104 Avenue NW	Sample results of the wastewater from a storm manhole (MH270975) located near 3211-104 Avenue NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 8,200,000 CFU/100 mL. The original sample was collected on January 23, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. Notice to Comply will be issued to the owners of any properties that have been confirmed to have a cross-connection. The Notices will require that the owners redirect their sanitary wastewater discharge from the storm sewer to the sanitary sewer system. This release was reported to AEPA (Ref# 424282). A written report was issued to AEPA on February 1, 2024.	Reportable-3rd Party Release	424282
29-Jan-2024	2804-Calgary Trail NW	Untreated wastewater (unknown volume) was released into the storm collection system from a private sanitary line surcharge located at a business complex (2804-Calgary Trail NW). EPCOR equipment was mobilized to the site to clear the blockage in the sanitary line and clean the impacted storm collection system (PIP78230). EPCOR Industrial Wastewater Investigators will issue a Notice to Comply to the property owner for the release. This release was reported to AEPA (Ref# 424460). A written report was issued to AEPA on February 5, 2024.	Reportable-3rd Party Release	424460
30-Jan-2024	12421-48 Street NW	An unknown hydrocarbon (approx. 2L) were released into the storm collection system (MH580700) at a residential alleyway located at 12421-48 Street NW. EPCOR Industrial Wastewater Investigators could not determine the source of the release. The investigators used absorbent pads to remove contaminants from the spill site. This release was reported to AEPA (Ref# 424503). A written report was not requested by AEPA.	Reportable-3rd Party Release	424503
31-Jan-2024	582-Evergreen Avenue NW	Untreated wastewater (approx. 100L) was released from a private sanitary manhole surcharge located at the Evergreen Trailer Park (582-Evergreen Avenue NW). EPCOR Industrial Wastewater Investigators confirmed that the release was contained on the ground and had been cleaned-up by a private contractor. There was no release of untreated wastewater into the storm collection system. This release was reported to AEPA (Ref# 424541) by the property manager. A written report was issued to AEPA on January 31, 2024.	Reportable-3rd Party Release	424541
09-Feb-2024	19803-96A Street NW	Sample results of the wastewater from a private storm manhole located near a condominium complex (19803-96A Street NW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 7,700,000 CFU/100 mL. The original sample was collected on February 6, 2024 by EPCOR Industrial Wastewater Investigators. A Notice to Comply was issued to the condominium association to locate and repair the cross-connection. This release was reported to AEPA (Ref# 424823). A written report was issued to AEPA on February 15, 2024.	Reportable-3rd Party Release	424823
23-Feb-2024	4504-53 Avenue NW	Sample results of the wastewater from a private sanitary manhole located at Aurora Machine (4504-53 Avenue NW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix A and Bylaw 18093 Schedule A "Prohibited Wastes" for Nickel at 9.75 mg/L. The original sample was collected on February 16, 2024 by EPCOR Industrial Wastewater Investigators. A Notice to Comply was issued to the business to discontinue the release of restricted / hazardous waste into the sewerage system. This release was reported to AEPA (Ref# 425356). A written report was issued to AEPA on March 5, 2024.	Reportable-3rd Party Release	425356
23-Feb-2024	7614-95 Avenue NW	Diesel fuel (approx. 25L) was released into the combined sewer system (MH250229) from a vehicle fuel theft at a residence located at 7614-95 Avenue NW. Absorbent booms were used to remove contaminants from inside the combined manhole. A City of Edmonton street sweeper was called in to remove contaminants from the area surrounding the spill site. This release was reported to AEPA (Ref# 425260) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	425260
26-Feb-2024	109-Street & Princess Elizabeth Avenue NW	Hydraulic fluid (approx. 25L) was released from a City of Edmonton snow plow located near 109-Street & Princess Elizabeth Avenue NW. The hydraulic fluid was slowly released onto the roadway as the plow travelled down 97-Street to the City of Edmonton – Central Yard (10517-95 Street NW).This release was reported to AEPA (Ref# 425400) by the City of Edmonton. A written report was issued to AEPA on March 1, 2024.	Reportable-3rd Party Release	425400

27-Feb-2024	12139-160 Street NW	A 12% Acetic Acid solution (approx. 3000L) was released into the storm collection system at Bimbo Canada (12139-160 Street NW). A 3rd party vacuum truck was called-in to remove contaminants from the private storm collection system. The storm wastewater from this facility would release into the North Saskatchewan River thru storm Outfall #18 (OF223752). This release was reported to AEPA (Ref# 425409) by the company. A written report was issued to AEPA on March 4, 2024.	Reportable-3rd Party Release	425409
05-Mar-2024	9608-25 Avenue NW	Boiler blowdown chemical (approx. 350L) was released into the storm collection system by a private company (BioNeutra North America Inc.) located at 9608-25 Avenue NW. EPCOR Industrial Wastewater Investigators arrived on site and directed the manager of the company to stop the discharge of boiler wastewater into their private storm catch basin. A Notice to Comply was issued to the company to discontinue the release of restricted waste into the sewerage system. A second Notice to Comply was issued that required the company to remove the wastewater (boiler chemical) from their private catch basin. This release was reported to AEPA (Ref# 425622) by the company. A written report was issued to AEPA on March 8, 2024.	Reportable-3rd Party Release	425622
10-Mar-2024	8501-70 Avenue NW	EPCOR Industrial Wastewater Investigators responded to a public complaint of hydrocarbon odours near the Mill Creek Oil Separator (8501-70 Avenue NW). The investigators checked the storm collection system and Mill Creek near the separator, but did not observe any visual evidence of a release to the environment. As a precaution the investigators placed a boom across Mill Creek to contain and absorb any trace hydrocarbons at this location. EPCOR will periodically re-inspect and replace the booms as required. No further investigation of the upstream storm system is planned at this time as no release to the storm collection system has been identified. This release was reported to AEPA (Ref# DINC0005460). A written report was issued to AEPA on March 18, 2024.	Reportable-3rd Party Release	0005460
11-Mar-2024	Whitemud Drive & Rainbow Valley Bridge NW	Sediment (unknown volume) was released into Whitemud Creek by a City of Edmonton Contractor (Graham Infrastructure LP) at the Terwillegar Drive Stage 2 Project worksite (Whitemud Drive & Rainbow Valley Bridge NW). Increased water levels during spring melt / runoff rose above the silt fence surrounding a previously isolated excavation near the creek. Immediately following the release, the contractor removed debris from the flooded area. To prevent a reoccurrence, Graham Construction will re-establish silt fencing and sandbags, complete a fish rescue, dewater the flooded area and place clay material along the bank to form a berm. This release was reported to AEPA (Ref# 425790) by the City of Edmonton. A written report was issued to AEPA on March 18, 2024.	Reportable-3rd Party Release	425790
16-Mar-2024	116-Avenue & 133-Street NW	Diesel fuel (approx. 1L) was released into the storm collection system (CB261162) from a private vehicle near the intersection of 116-Avenue & 133-Street NW. The unidentified vehicle damaged a fire hydrant and then left the scene of the accident. EPCOR Industrial Wastewater Investigators used absorbent pads to remove contaminants from the impacted storm collection system. EPCOR Water Services completed repairs to the damaged fire hydrant. This release was reported to AEPA (Ref# 426023). A written report was issued to AEPA on March 22, 2024.	Reportable-3rd Party Release	426023
20-Mar-2024	10044-90 Avenue NW	Sample results of the wastewater from a storm manhole (MH315915) near a private residence (10044-90 Avenue NW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 18100 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 3000 CFU/100 mL. The original sample was collected on March 18, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR Industrial Wastewater Investigators have issued a Notice to Comply to the homeowner to locate and repair the cross-connection. This release was reported to AEPA (Ref# 426177). A written report was issued to AEPA on March 27, 2024.	Reportable-3rd Party Release	426177
27-Mar-2024	10204-119 Street NW	Untreated wastewater (unknown volume) was released thru an interconnection (PIP49190) located at 10204-119 Street NW. A blockage occurred in a combined line sewer pipe, which then released untreated wastewater thru the interconnection into the nearby storm manhole (MH255520). A 3rd party company has been identified as releasing concrete waste into the combined line resulting in the blockage. It has been confirmed that during dry weather flow, the storm line at this location flows into the combined sewer system and on to the Gold Bar Wastewater Treatment Plant for treatment. EPCOR equipment was mobilized to the site and cleared the downstream obstruction restoring normal flow. EPCOR also initiated an emergency repair in the downstream system to remove any remaining concrete which would interfere with the operation of the system. Compliance activity has been initiated against the third party and the interconnection continues to be monitored through remote sensor. This release was reported to AEPA (Ref# 426376). A written report was issued to AEPA on April 4, 2024.	Reportable-3rd Party Release	426376

31-Mar-2024	17404-90 Avenue	Glycol (approx. 0.5L) was released into a storm catch basin (CB236026) by a City of Edmonton – Transit bus located at 17404-90 Avenue NW. EPCOR Industrial Wastewater Investigators confirmed that the release was contained with the catch basin sump and there was no release of glycol to the storm collection system. An EPCOR vactor truck was mobilized to the spill site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 426417) by the City of Edmonton. A written report was issued to AEPA on April 4, 2024.	Reportable-3rd Party Release	426417
01-Apr-2024	18204-93 Avenue NW	Wastewater (unknown volume) was released from a private waste collection vehicle garbage fire (18204-93 Avenue NW). A fire broke out in the back of a private waste collection vehicle and City of Edmonton – Fire Services was called-in to extinguish the fire. Water that was used to put out the fire entered a nearby storm catch basin (MH234253). No debris or contaminants were observed in the downstream storm collection system. This release was reported to AEPA (Ref# 426439). A written report was issued to AEPA on April 5, 2024.	Reportable-3rd Party Release	426439
02-Apr-2024	425-Abbotsfield Road NW	Sample results of the wastewater from a private storm manhole near a private residence (425-Abbotsfield Road NW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 1,500,000 CFU/100 mL. The original sample was collected on March 27, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR Industrial Wastewater Investigators have issued a Notice to Comply to the property owner to locate and repair the cross-connection. This release was reported to AEPA (Ref# 426450). A written report was issued to AEPA on April 4, 2024.	Reportable-3rd Party Release	426450
02-Apr-2024	804-181 Street SW	Sample results of the wastewater from a drainage ditch near a private residence (804-181 Street SW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 2,800 CFU/100 mL. The original sample was collected on March 21, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR Industrial Wastewater Investigators have identified that the septic mound on the property is not functioning as intended and discharges of untreated wastewater are occurring infrequently from the property. EPCOR has issued a Notice to Comply to the property owner to discontinue the release of restricted waste into the sewerage system. This release was reported to AEPA (Ref# 426470). A written report was issued to AEPA on April 8, 2024.	Reportable-3rd Party Release	426470
04-Apr-2024	12038-107 Avenue	Glycol (approx. 5L) was released into a storm catch basin (CB260036) by a City of Edmonton – Transit bus located at 12038-107 Avenue NW. EPCOR Industrial Wastewater Investigators confirmed that the release was contained with the catch basin sump and there was no release of glycol to the storm collection system. An EPCOR vactor truck was mobilized to the spill site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 426534) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	426534
06-Apr-2024	8560-112 Street NW	Propylene glycol (approx. 4500L) was released into the combined sewer system from the University of Alberta – Li Ka Shing Centre (8560-112 Street NW). The Manager of Environment & Support Services with the University of Alberta (UofA) reported that the release was a result of work with the buildings HVAC system. EPCOR was notified of the release on April 8, 2024. A second release of propylene glycol (approx. 4500L) occurred from the HVAC system at the Li Ka Shing Centre for Health Research Innovation on April 8, 2024. EPCOR was notified of this release on April 9, 2024. The Goldbar treatment plant was notified of both spills and no anomalies had been observed at the time of the releases. EPCOR has issued a Notice to Comply to the University of Alberta to discontinue the release of prohibited waste (propylene glycol) into the sewerage system. Both releases were reported to AEPA (Ref# 426635) by the University of Alberta. A written report was issued to AEPA on April 12, 2024.	Reportable-3rd Party Release	426635
13-Apr-2024	12403-Fort Road NW	Diesel fuel (approx. 2L) was released into a sanitary floor drain at the City of Edmonton – Kathleen Andrews Transit Garage (12403-Fort Road NW). EPCOR Industrial Wastewater Investigators confirmed that the floor drains inside the building are connected to a downstream interceptor that contained the diesel fuel contaminants. This release was reported to AEPA (Ref# 426837) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	426837
15-Apr-2024	10517-95 Street NW	Potable water (approx. 15L) was released from a fire hydrant into a nearby storm catch basin (CB264696) at the City of Edmonton – Central District Yard (10517-95 Street NW). The catch basin at this location releases into the combined sewer system. This release was reported to AEPA (Ref# 426913) by the City of Edmonton. A written report was issued to AEPA on April 17, 2024.	Reportable-3rd Party Release	426913

18-Apr-2024	13020-56 Street NW	Paint (approx. 5L) was released into a floor sump at the City of Edmonton – Kennedale Traffic Operations building (13020-56 Street NW). The paint was fully contained within the sump. A private vacuum truck (NorAlta) was called-in to remove the contaminants from the sump. This release was reported to AEPA (Ref# 427074) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	427074
19-Apr-2024	13650-50 Street NW	Untreated wastewater (unknown volume) was released into the storm collection system from a private sanitary line surcharge located at COSTCO Wholesale (13650-50 Street NW). A 3rd party company was called to the site to clear the blockage in the sanitary line. EPCOR equipment was mobilized to clean the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 427098). A written report was issued to AEPA on April 26, 2024.	Reportable-3rd Party Release	427098
23-Apr-2024	11760-109 Street NW	Contaminated wastewater (unknown volume) was released by City of Edmonton – Fire Services at the Blatchford Hanger 11 (11760-109 Street NW) fire. Water that was used to put out the fire was released into the combined collection system. This release was reported to AEPA (Ref# 427196) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	427196
24-Apr-2024	1851-111 Street NW	Diesel fuel (approx. 1L) was released into a storm catch basin at the EPCOR Kaskitayo Reservoir filling station (1851-111 Street NW). EPCOR Industrial Wastewater Investigators placed absorbent material into the catch basin to absorb fuel residue. The investigators inspected the downstream storm outfall (OF327183) located at Blackmud Creek and no hydrocarbon contaminants were observed. This release was reported to AEPA (Ref# 427272). A written report was issued to AEPA on May 1, 2024.	Reportable-3rd Party Release	427272
30-Apr-2024	13650-50 Street NW	Hydraulic fluid (approx. 20L) was released from a trash compactor into the storm collection system at COSCO Wholesale (13650-50 Street NW). EPCOR Industrial Wastewater Investigators confirmed that the contaminants were removed from the storm collection system and surrounding area by a 3rd party vacuum truck (Supreme Vac). This release was reported to AEPA (Ref# 427488) by the company. A written report was issued to AEPA on May 6, 2024.	Reportable-3rd Party Release	427488
01-May-2024	1718-Rabbit Hill Road NW	Glycol (approx. 0.5L) was released into the storm collection system (CB383009) by a City of Edmonton – Transit bus located at 1718-Rabbit Hill Road NW. EPCOR Industrial Wastewater Investigators confirmed that the stormwater from CB383009 would release into the Hodgson SWMF (SWM372285). A 3rd party (NorAlta) vactor truck was mobilized to the spill site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 427499) by the City of Edmonton. A written report was issued to AEPA on May 2, 2024.	Reportable-3rd Party Release	427499
01-May-2024	14019-90 Avenue NW	Pool water (approx. 4000L) was released into the storm collection system (CB240081) by a private resident located at 14019-90 Avenue NW. EPCOR Industrial Wastewater Investigators arrived on site and educated the homeowner on the importance of dechlorinating pool water before releasing it to the nearby storm catch basin. The resident was also informed of the requirement to contact EPCOR when a large volume release is occurring. This release was reported to AEPA (Ref# 427614) by the homeowner. A written report was not requested by AEPA.	Reportable-3rd Party Release	427614
05-May-2024	5404-59 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton SE District Yard (5404-59 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 814 mg/L and Total Cadmium at 0.0008 mg/L. The original sample from the SE District Yard was collected on April 17, 2024 by COEECR. This release was reported to AEPA (Ref# 427576) by the City of Edmonton. A written report was issued to AEPA on May 16, 2024.	Reportable-3rd Party Release	427576
05-May-2024	14402-114 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton NW District Yard (14402-114 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 593 mg/L, Total Phosphorous at 1.59 mg/L, E.coli at 330 CFU/100 mL, Total Cadmium at 0.0010 mg/L, Total Lead at 0.072 mg/L, Oil & Grease at 18 mg/L and Total Zinc at 0.971 mg/L. The original sample from the NW District Yard was collected on April 17, 2024 by COEECR. This release was reported to AEPA (Ref# 427578) by the City of Edmonton. A written report was issued to AEPA on May 16, 2024.	Reportable-3rd Party Release	427578
05-May-2024	13003-56 Street NW	Sample results of the stormwater discharge from the City of Edmonton NE District Yard (13003-56 Street NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 1040 mg/L, Total Phosphorous at 2.37 mg/L, Total Cadmium at 0.002 mg/L, Total Lead at 0.049 mg/L, Total Nickel at 0.087 mg/L, Oil & Grease at 18 mg/L and Total Zinc at 1.03 mg/L. The original sample from the NE District Yard was collected on April 17, 2024 by COEECR. This release was reported to AEPA (Ref# 427577) by the City of Edmonton. A written report was issued to AEPA on May 16, 2024.	Reportable-3rd Party Release	427577

05-May-2024	9204-213 Street NW	Glycol (approx. 1L) was released into the floor interceptor at the City of Edmonton – Fire Station #29 located at 9204-213 Street NW. EPCOR Industrial Wastewater Investigators confirmed that the spill was cleaned up by COE – Fire Services using absorbent material from a spill kit. There was no release of glycol into the storm / sanitary collection system. This release was reported to AEPA (Ref# 427626) by the City of Edmonton. A written report was issued to AEPA on May 9, 2024.	Reportable-3rd Party Release	427626
05-May-2024	4510-68 Avenue NW	Sample results of the stormwater discharge from Maple Leaf Metals (4510-68 Avenue NW) were received and reviewed by EPCOR Monitoring & Compliance. The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Cadmium at 0.0005 mg/L, Chromium at 0.089 mg/L, Copper at 0.160 mg/L, Lead at 0.020 mg/L, Nickel at 0.080 mg/L, and Zinc at 0.30 mg/L. The original sample from the company was collected on May 1, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR Industrial Wastewater Investigators have issued a Notice to Comply to the company to discontinue the release of restricted wastes into the storm sewer system. This release was reported to AEPA (Ref# 427728) by the company. A written report was issued to AEPA on May 15, 2024.	Reportable-3rd Party Release	427728
08-May-2024	11211-142 Street NW	Glycol (approx. 190L) was released into a floor drain at the TELUS World of Science facility (11211-142 Street NW). EPCOR Industrial Wastewater Investigators confirmed that the release from the boiler system at the facility entered the sanitary sewer system. Absorbent pads from a spill kit were used to clean-up contaminants around the floor drain. There was no release of glycol into the storm collection system. This release was reported to AEPA (Ref# 427714) by the City of Edmonton. A written report was issued to AEPA on May 10, 2024.	Reportable-3rd Party Release	427714
13-May-2024	12824-48 Street NW	Gasoline (approx. 100L) was released into the storm collection system (MH283449) from a vehicle fuel theft at Enterprise Rent-A-Car Canada located at 12824-48 Street NW. A 3rd party vacuum truck (Clean Harbors) was called to the site to clean-up the impacted storm collection system and surrounding area. EPCOR has issued a Notice to Comply to the company to discontinue the release of prohibited waste (gasoline) into the sewerage system. This release was reported to AEPA (Ref# 428023). A written report was issued to AEPA on May 15, 2024.	Reportable-3rd Party Release	428023
16-May-2024	12512-Landsdowne Drive NW	Wastewater (approx. 334 cubic meters) was released into the storm collection system by Graham Infrastructure located at 12512-Landsdowne Drive NW. The contractor had an EPCOR permit (PR24-506536473) to release wastewater generated from hydro demolition activities into the sanitary sewer system. EPCOR Industrial Wastewater Investigators confirmed that the contractor had been releasing the wastewater into a nearby storm manhole (MH303887). The contractor was instructed by the investigators to move the wastewater discharge hose from the storm to the sanitary manhole (MH211008). This release was reported to AEPA (Ref# 428117) by the contractor. A written report was issued to AEPA on May 23, 2024.	Reportable-3rd Party Release	428117
16-May-2024	13027-83 Street NW	Hydraulic fluid (approx. 4L) was released into the storm collection system (MH277657) from a City of Edmonton waste collection truck located at 13027-83 Street NW. EPCOR Industrial Wastewater Investigators confirmed that recent rainfall had released hydraulic fluid into the storm collection system. Absorbent pads were used to remove contaminants from the spill site. This release was reported to AEPA (Ref# 428116) by the City of Edmonton. A written report was issued to AEPA on May 22, 2024.	Reportable-3rd Party Release	428116
17-May-2024	102-Avenue & 176-Street NW	Glycol (approx. 0.5L) was released from a City of Edmonton – Transit bus located at 102-Avenue & 176-Street NW. EPCOR Industrial Wastewater Investigators confirmed that there was no release of glycol into the storm / sanitary collection system. The City of Edmonton mobilized a sweeper truck to remove contaminants from the spill site. This release was reported to AEPA (Ref# 428139) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	428139
21-May-2024	114-Avenue & 144-Street NW	DEF fuel additive (approx. 2L) was released into a private storm catch basin at the City of Edmonton – fueling station located at 114-Avenue & 144-Street NW. EPCOR Industrial Wastewater Investigators confirmed that the release had been contained within the private storm sewer system at this location. The City of Edmonton called-in a 3rd party vacuum truck to clean out the impacted private catch basin and surrounding area. This release was reported to AEPA (Ref# 428217) by the City of Edmonton. A written report was issued to AEPA on May 28, 2024.	Reportable-3rd Party Release	428217
21-May-2024	6609-Gateway Boulevard NW	Calcium chloride / rain water mixture (approx. 3700L) was released into a private storm catch basin at the City of Edmonton – Southwest District Yard (6609-Gateway Boulevard NW). EPCOR Industrial Wastewater Investigators confirmed that the release from this location would have entered the combined sewer system. The City of Edmonton called-in a 3rd party vacuum truck to clean out the impacted private catch basin and surrounding area.This release was reported to AEPA (Ref# 428256) by the City of Edmonton. A written report was issued to AEPA on May 28, 2024.	Reportable-3rd Party Release	428256

22-May-2024	14402-114 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton NW District Yard (14402-114 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for E. coli at 4300 CFU/100 mL and Phenols at 0.009 mg/L. The original sample from the NW District Yard was collected on May 7, 2024 by COEECR. This release was reported to AEPA (Ref# 428246) by the City of Edmonton. A written report was issued to AEPA on May 24, 2024.	Reportable-3rd Party Release	428246
22-May-2024	13003-56 Street NW	Sample results of the stormwater discharge from the City of Edmonton NE District Yard (13003-56 Street NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 204 mg/L and E.coli at 1000 CFU/100 mL. The original sample from the NE District Yard was collected on May 7, 2024 by COEECR. This release was reported to AEPA (Ref# 428245) by the City of Edmonton. A written report was issued to AEPA on May 24, 2024.	Reportable-3rd Party Release	428245
22-May-2024	5404-59 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton SE District Yard (5404-59 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 148 mg/L and Total Cadmium at 0.0027 mg/L. The original sample from the SE District Yard was collected on May 7, 2024 by COEECR. This release was reported to AEPA (Ref# 428244) by the City of Edmonton. A written report was issued to AEPA on May 24, 2024.	Reportable-3rd Party Release	428244
22-May-2024	129-Avenue & 127-Street NW	Hydraulic fluid (approx. 0.5L) was released from a City of Edmonton – garbage truck located at 129-Avenue & 127-Street NW. EPCOR Industrial Wastewater Investigators confirmed that there was no release of hydraulic fluid into the storm / sanitary collection system. The City of Edmonton mobilized a sweeper truck to remove contaminants from the spill site. This release was reported to AEPA (Ref# 428291) by the City of Edmonton. A written report was issued to AEPA on May 28, 2024.	Reportable-3rd Party Release	428291
22-May-2024	17616-111 Avenue NW	Gasoline (approx. 80L) was released from a damaged vehicle into the storm collection system at the Tesla Service Center located at 17616-111 Avenue NW. EPCOR Industrial Wastewater Investigators confirmed that a 3rd party vacuum truck was called to the site to clean contaminants from the impacted private storm sewer system and surrounding area. This release was reported to AEPA (Ref# 428294) by the company. A written report was not requested by AEPA.	Reportable-3rd Party Release	428294
24-May-2024	105-Avenue & 135-Street NW	Diesel fuel (approx. 125L) was released from a vehicle leak into the storm collection system (CB345657) from the Marigold Infrastructure Partners worksite located at 105-Avenue & 135-Street NW. A 3rd party vacuum truck was called to the site to clean contaminants from the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 428360) by the company. A written report was issued to AEPA on May 26, 2024.	Reportable-3rd Party Release	428360
24-May-2024	8611-44 Avenue NW	Motor oil (approx. 5L) was released from an unknown source into the storm collection system (CB557833) located in a residential neighborhood at 8611-44 Avenue NW. A 3rd party vacuum truck (GFL Environmental) was called to the site to clean contaminants from the impacted storm collection system and surrounding area. EPCOR Industrial Wastewater Investigators will issue letters to nearby residential property owners providing educational material regarding Drainage Bylaw 19627, stormwater discharges and environmental impacts. This release was reported to AEPA (Ref# 428358). A written report was issued to AEPA on May 29, 2024.	Reportable-3rd Party Release	428358
29-May-2024	5929-86 Street NW	Treated grease trap wastewater (unknown volume) was released into the storm collection system from Suck-U-Sump located at 5929-86 Street NW. The grease trap waste had been treated with a hydrated lime polymer to flocculate the oil & grease prior to discharging the wastewater to a nearby private storm catch basin. The business owner has been directed by EPCOR Industrial Wastewater Investigators to complete a clean-up of the impacted private storm collection system and the surrounding site. EPCOR Investigators have directed the business owner to discontinue the release of wastewater to the storm collection system. This release was reported to AEPA (Ref# 428540) by the company. A written report was issued to AEPA on June 5, 2024.	Reportable-3rd Party Release	428540
03-Jun-2024	18603-106A Avenue NW	Fuel / firefighting chemicals (approx. 30L) were released into the storm collection system (MH251952) at the City of Edmonton – Fire Services Training Center (18603-106A Avenue NW). EPCOR Industrial Wastewater Investigators confirmed that recent rainfall had overflowed an open pan used for firefighting training and released contaminants into a nearby storm manhole. A 3rd party vactor truck was mobilized to the spill site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 428726) by City of Edmonton – Fire Services. A written report was issued to AEPA on June 10, 2024.	Reportable-3rd Party Release	428726

05-Jun- 2024	14724-65 Street NW	Sample results of the wastewater from a storm manhole (MH298741) located at 14724-65 Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 25,000 CFU/100 mL. EPCOR Industrial Wastewater Investigators conducted a dye test and confirmed the presence of a cross-connection at this location. A Notice to Comply was issued to the property owner to have their sanitary wastewater redirected from the storm sewer into the sanitary sewer system. Once the repairs are completed, EPCOR will collect a sample to ensure compliance. This release was reported to AEPA (Ref# 428829). A written report was issued to AEPA on June 12, 2024.	Reportable- 3rd Party Release	428829
06-Jun-2024	5134 Mullen Road NW	Firefighting water (unknown volume) was released into the storm collection system from a commercial vehicle fire (Collective Waste Solutions) located at 5134 Mullen Road NW. A representative from the company stated to EPCOR Industrial Wastewater Investigators there was no fuel/oils released from the vehicle. This release was reported to AEPA (Ref# 428871) by the complainant. A written report was issued to AEPA on June 11, 2024.	Reportable- 3rd Party Release	428871
07-Jun-2024	14339-50 Street NW	Untreated wastewater (unknown volume) was released into the storm collection system from a sanitary line surcharge located near 14339-50 Street NW. EPCOR Industrial Wastewater Investigators observed wastewater surcharging from a sanitary manhole (MH298552) and releasing into nearby storm catch basins (CB487957 & CB484643). EPCOR equipment was mobilized to release the sanitary line blockage (grease) and clean the impacted storm collection system. EPCOR will conduct further investigations of upstream businesses to ensure compliance with Drainage Bylaw 19627, including adequate pretreatment systems and maintenance. This release was reported to AEPA (Ref# 428934). A written report was issued to AEPA on June 13, 2024.	Reportable- 3rd Party Release	428934
11-Jun-2024	12010-River Valley Road NW	A 50% propylene glycol solution (approx. 70L) was released into a floor drain at the City of Edmonton – Victoria Park Pavilion (12010-River Valley Road NW). EPCOR Industrial Wastewater Investigators confirmed that the floor drain is connected to a holding tank and there was no release of glycol to the storm / sanitary collection system. The COE will ensure that wastewater from the holding tank will be hauled away to an acceptable disposal facility. This release was reported to AEPA (Ref# 429046) by the City of Edmonton. A written report was not requested by AEPA.	Reportable- 3rd Party Release	429046
11-Jun-2024	8620-58 Avenue NW	Diesel fuel (approx. 20L) was released into a floor sump at the City of Edmonton – Thomas Ferrier Garage (8620-58 Avenue NW). EPCOR Industrial Wastewater Investigators confirmed that the diesel fuel was contained within the sump and there was no release to the storm / sanitary collection system. A 3rd party vactor truck was called-in to remove contaminants from the sump. This release was reported to AEPA (Ref# 429058) by the City of Edmonton. A written report was not requested by AEPA.	Reportable- 3rd Party Release	429058
13-Jun-2024	4710-Gateway Boulevard NW	Potable water (approx. 15,000 cubic meters) was released into the storm collection system at the Ever Square Professional Building (4710-Gateway Boulevard NW). EPCOR Industrial Wastewater Investigators confirmed that a broken water valve had flooded the building parkade. EPCOR Water D&T was mobilized to the site and closed off the water to the damaged line. The building contractor called-in a 3rd party company to pump the water from the parkade into the storm collection system. When EPCOR Investigators arrived on site they placed dechlorination pucks into the storm collection system (MH304003) to remove chlorine residue from the potable water. An unknown volume of dechlorinated and partially dechlorinated water entered the storm collection system and would have been released downstream thru storm Outfall #9 (OF207873). This release was reported to AEPA (Ref# 429122) by the contractor. A written report was issued to AEPA on June 26, 2024.	Reportable- 3rd Party Release	429122
14-Jun-2024	2815-Anton Wynd SW	Diesel fuel (approx. 200L) was released into the storm collection system (CB528994) from a school bus fire at 2815-Anton Wynd SW. EPCOR Industrial Wastewater Investigators called in a 3rd party vacuum truck (GFL Environmental) to remove contaminants from the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 429181) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable- 3rd Party Release	429181
14-Jun-2024	11411-51 Avenue NW	Hydrocarbons (approx. 5L) were released into the storm collection system (CB226883) by a resident located at 11411-51 Avenue NW. EPCOR Industrial Wastewater Investigators placed absorbent booms in the impacted storm collection system and the surrounding area. A heavy rainfall during the investigation prevented any further clean-up activities. A Notice to Comply was issued to the property owner to discontinue the release of restricted waste into the sewerage system. This release was reported to AEPA (Ref# 429192). A written report was issued to AEPA on June 21, 2024.	Reportable- 3rd Party Release	429192

17-Jun-2024	8604-10 Avenue NW	A concrete slurry (approx. 5L) was released into the storm collection system (CB202562) by a City of Edmonton contractor located at 8604-10 Avenue NW. A 3rd party vacuum truck (GFL Environmental) was called to the site to remove contaminants from the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 429281) by the City of Edmonton. A written report was issued to AEPA on June 24, 2024.	Reportable-3rd Party Release	429281
18-Jun-2024	4211-106 Street NW	Antifreeze (approx. 1L) was released into a storm catch basin (CB447109) from a City of Edmonton bus located at 4211-106 Street NW. EPCOR Industrial Wastewater Investigators confirmed that the release was contained within the catch basin sump. A 3rd party vacuum truck (GFL Environmental) was called to the site to remove contaminants from the catch basin and surrounding area. This release was reported to AEPA (Ref# 429278) by the City of Edmonton. A written report was issued to AEPA on June 24, 2024.	Reportable-3rd Party Release	429278
19-Jun-2024	9626-96A Street NW	Glycol (approx. 1L) was released into the combined sewer system at the City of Edmonton – Muttart Conservatory (9626-96A Street NW). EPCOR Industrial Wastewater Investigators confirmed that the release from a leaking coolant pipe entered a nearby floor drain and there was no release to the storm collection system. This release was reported to AEPA (Ref# 429312) by the City of Edmonton. A written report was issued to AEPA on June 24, 2024.	Reportable-3rd Party Release	429312
19-Jun-2024	18562-104 Avenue NW	Gasoline (approx. 1L) was released into the storm collection system (MH404386) from a vehicle fuel theft at the Sunwapta Business Centre located at 18562-104 Avenue NW. A 3rd party vacuum truck (Suck-U-Sump Services) was called to the site to clean-up the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 429330) by the property manager. A written report was issued to AEPA on June 20, 2024.	Reportable-3rd Party Release	429330
19-Jun-2024	16110-116 Avenue NW	Diesel fuel (approx. 400L) was released into the storm collection system (MH254752) from a vehicle accident at Saputo Dairy Products located at 16110-116 Avenue NW. EPCOR Industrial Wastewater Investigators placed absorbent booms in EPCOR storm manholes to absorb and contain any contaminants in the storm collection system. A 3rd party vacuum truck (GFL Environmental) was called to the site to clean-up the impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 429364) by the company. A written report was issued to AEPA on June 20, 2024	Reportable-3rd Party Release	429364
21-Jun-2024	9704-182 Street NW	Untreated wastewater (unknown volume) was released into the storm collection system from a private sanitary line surcharge located at the La Perle Shopping Centre (9704-182 Street NW). EPCOR Industrial Wastewater Investigators observed wastewater surcharging from a private sanitary manhole and releasing into a nearby storm catch basin. A 3rd party vacuum truck (Renew Services Inc.) was called to the site to release the sanitary line blockage and clean-up the impacted storm collection system and surrounding area. A Notice to Comply was issued to the property owner to discontinue the release of restricted waste into the sewerage system. To prevent a reoccurrence of this incident, inspections of upstream businesses were performed to ensure that pre-treatment systems are in working order and are adequately maintained. Notices to Comply were issued to three additional businesses in the complex. This release was reported to AEPA (Ref# 429576) by EPCOR Monitoring & Compliance. A written report was issued to AEPA on June 26, 2024.	Reportable-3rd Party Release	429576
24-Jun-2024	7381-May Common NW	Motor oil (approx. 1L) was released from an ambulance located at 7381-May Common NW. A City of Edmonton street sweeper was called to the site to remove contaminants from the roadway. EPCOR Industrial Wastewater Investigators confirmed that there was no release of oil to the storm / sanitary collection system. This release was reported to AEPA (Ref# 429544) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	429544
24-Jun-2024	111-Avenue & Anthony Henday Drive NW	Diesel fuel (approx. 50L) was released from a vehicle collision located at 111-Avenue & Anthony Henday Drive NW. A City of Edmonton street sweeper was called to the site to remove contaminants from the roadway. EPCOR Industrial Wastewater Investigators confirmed that there was no release of fuel to the storm / sanitary collection system. This release was reported to AEPA (Ref# 429484) by City of Edmonton – Fire Services. A written report was not requested by AEPA	Reportable-3rd Party Release	429484
26-Jun-2024	6415-75 Street NW	Contaminants (unknown volume) from firefighting activities were released into the storm collection system from a commercial building fire at 6415-75 Street NW. EPCOR Industrial Wastewater Investigators observed that water used to fight a garbage fire at this facility had entered nearby storm catch basins. The storm collection system at this location releases into Mill Creek thru the Mill Creek Oil Separator (OF385992).This release was reported to AEPA (Ref# 429620) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	429620

28-Jun-2024	13500-156 Street NW	Sample results of the stormwater discharge from the Price Steel Ltd (13500-156 Street NW) were received and reviewed by City of EPCOR Monitoring & Compliance. The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for BOD at 408 mg/L, COD at 1830 mg/L, Copper at 0.213 mg/L, E. coli at 2700 CFU/100 mL, Lead at 0.135, Total Phosphorus at 1.06 mg/L and Zinc at 0.845 mg/L. The original sample from the company was collected on June 13, 2024 by EPCOR Industrial Wastewater Investigators. A 3rd party vacuum truck (North Star Hydrovac) was called to the site to clean-up the impacted storm collection system and surrounding area. EPCOR has issued a Notice to Comply to the company to discontinue the release of restricted waste into the storm sewerage system. This release was reported to AEPA (Ref# 429763) by the company. A written report was issued to AEPA on July 2, 2024.	Reportable-3rd Party Release	429763
28-Jun-2024	1718-Rabbit Hill Road NW	Gasoline (approx. 20L) was released from a damaged vehicle located at 1718-Rabbit Hill Road NW. EPCOR Industrial Wastewater Investigators confirmed that there was no release of gasoline into the storm / sanitary collection system. This release was reported to AEPA (Ref# 429705) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	429705
03-Jul-2024	8-Steele Crescent NW	Untreated wastewater (unknown volume) was released into the storm collection system from a private residence located at 8-Steele Crescent NW. EPCOR Industrial Wastewater Investigators observed that the homeowner was pumping untreated wastewater out of their basement and onto the nearby street. The untreated wastewater ran down the street approximately 100 meters and entered a storm catch basin (CB296732). EPCOR equipment was mobilized to the site and removed the blockage in the sanitary system stopping the flow of untreated wastewater into the residential home. On-site remediation of this release was not possible at the time of response due to concurrent heavy rainfall events which transported the untreated wastewater down the street and into the storm collection system. This release was reported to AEPA (Ref# 429815). A written report was issued to AEPA on July 9, 2024.	Reportable-3rd Party Release	429815
05-Jul-2024	111-Street & Cavanagh Drive SW	Asphalt cuttings (approx. 1L) was released into the storm collection system (CB543142) by a private contractor (Highline Electrical Constructors Ltd) located at 111-Street & Cavanagh Drive SW. EPCOR Industrial Wastewater Investigators observed silt residue along the roadway leading to the impacted catch basin. This release was reported to AEPA (Ref# 430313) by the contractor. A written report was issued to AEPA on July 23, 2024.	Reportable-3rd Party Release	430313
09-Jul-2024	19107-22 Avenue NW	Hydraulic fluid (approx. 2L) was released into the sanitary sewer system (MH579259) from a landscaping truck accident at 19107-22 Avenue NW. A City of Edmonton sweeper was called to the site to remove contaminants from along the roadway. EPCOR Industrial Wastewater Investigators confirmed that there was no release of hydraulic fluid to the storm collection system. This release was reported to AEPA (Ref# 430114) by the landscaping company. A written report was not requested by AEPA.	Reportable-3rd Party Release	430114
11-Jul-2024	14402-114 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton NW District Yard (14402-114 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Biochemical Oxygen Demand at 56 mg/L, Chemical Oxygen Demand at 3630 mg/L, Total Cadmium at 0.0029 mg/L, Hexavalent Chromium at 0.0178 mg/L, Total Lead at 0.048 mg/L and Phenols at 0.021 mg/L. The original sample from the NW District Yard was collected on June 27, 2024 by COEECR. This release was reported to AEPA (Ref# 430257) by the City of Edmonton. A written report was issued to AEPA on July 16, 2024.	Reportable-3rd Party Release	430257
11-Jul-2024	13003-56 Street NW	Sample results of the stormwater discharge from the City of Edmonton NE District Yard (13003-56 Street NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for Chemical Oxygen Demand at 216 mg/L and E.coli at 1000 CFU/100 mL. The original sample from the NE District Yard was collected on June 27, 2024 by COEECR. This release was reported to AEPA (Ref# 430255) by the City of Edmonton. A written report was issued to AEPA on July 16, 2024.	Reportable-3rd Party Release	430255
11-Jul-2024	5404-59 Avenue NW	Sample results of the stormwater discharge from the City of Edmonton SE District Yard (5404-59 Avenue NW) were received and reviewed by City of Edmonton Environment and Climate Resilience (COEECR). The results of the sample exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B Restricted Wastes Applicable to Storm Sewers and Watercourses for E.coli at 480 CFU/100 mL. The original sample from the SE District Yard was collected on June 27, 2024 by COEECR. This release was reported to AEPA (Ref# 430253) by the City of Edmonton. A written report was issued to AEPA on July 16, 2024.	Reportable-3rd Party Release	430253

13-Jul-2024	757-Lee Ridge Road NW	Untreated wastewater / cleaning chemicals (approx. 200L) was released into the storm collection system (CB218342) from a homeowner located at 757-Lee Ridge Road NW. EPCOR Industrial Wastewater Investigators determined that the homeowner had used a solution of bleach / Mr. Clean to clean-out the holding tanks of his RV unit. A 3rd party (GFL Environmental) vactor truck was mobilized to the spill site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 430354) by the resident. A written report was issued to AEPA on July 15, 2024.	Reportable-3rd Party Release	430354
16-Jul-2024	149-Avenue & 59-Street NW	Sample results of the wastewater from a storm manhole (MH297519) located at 149-Avenue & 59-Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 1,100,000 CFU/100 mL. The original sample from this location was collected on July 8, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. EPCOR will work with impacted properties to identify and correct sanitary cross-connections to the storm collection system. This release was reported to AEPA (Ref# 430482). A written report was issued to AEPA on July 23, 2024.	Reportable-3rd Party Release	430482
16-Jul-2024	13025-56 Street NW	Diesel fuel (approx. 100L) was released from a damaged street sweeper at the City of Edmonton – NE District Yard (13025-56 Street NW). EPCOR Industrial Wastewater Investigators confirmed that the diesel fuel was contained within the sump of a private storm catch basin and there was no release to the storm collection system. A 3rd party vactor truck (Noralta Environmental Services Ltd.) was called-in to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 430451) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	430451
16-Jul-2024	6150-Davies Road NW	Diesel fuel (approx. 100L) was released from a damaged commercial vehicle (TST-CF Express) located at 6150-Davies Road NW. EPCOR Industrial Wastewater Investigators confirmed that the diesel fuel was contained on the road surface and there was no release to the storm collection system. A 3rd party environmental company (Rapid Response Industrial Group Ltd.) was called-in to remove contaminants from the roadway. This release was reported to AEPA (Ref# 430455) by the company. A written report was issued to AEPA on July 23, 2024.	Reportable-3rd Party Release	430455
17-Jul-2024	372-Lessard Drive NW	Concrete slurry (approx. 100L) was released into the storm collection system (CB221765) from a private company (Bigfoot Concrete Services Inc.) located at 372-Lessard Drive NW. EPCOR Industrial Wastewater Investigators confirmed that the company removed the contaminants from the impacted storm catch basin and surrounding area. A Notice to Comply was issued to the company to discontinue the release of restricted waste into the storm sewer system. This release was reported to AEPA (Ref# 430528) by the company. A written report was not requested by AEPA.	Reportable-3rd Party Release	430528
22-Jul-2024	29592-Parsons Road NW.	Soybean oil (approx. 2000L) was released into the sanitary collection system from a private company (Ventura Foods) located at 29592-Parsons Road NW. During filling operations at the facility, a soybean oil holding tank overflowed into a nearby floor drain. The company used absorbent material from a spill kit to remove soybean oil contaminants from the floor. A Notice to Comply was issued to the company to discontinue the release of prohibited waste into the sewerage system. This release was reported to AEPA (Ref# 430759) by the company. A written report was issued to AEPA on July 30, 2024.	Reportable-3rd Party Release	430759
22-Jul-2024	10810-186 Street NW	Diluted flocculent (approx. 11,000L) was released into the sanitary sewer system at the EPCOR Poundmaker Transfer Station (10810-186 Street NW). EPCOR Industrial Wastewater Investigators confirmed that a hauler (Hennig Septic Services) had discharged the substance into the oil/water separator at the facility. EPCOR contracted a 3rd party company (Secure Energy) to clean, haul and dispose of the contaminants to an authorized treatment facility. There was no release of flocculent to the storm collection system. This release was reported to AEPA (Ref# 430789). A written report was issued to AEPA on July 29, 2024.	Reportable-3rd Party Release	430789
25-Jul-2024	6950-113 Street NW	Hydraulic fluid (approx. 5L) was released into the sanitary collection system from an elevator system leak at the Alberta Infrastructure building (6950-113 Street NW). There was no release of hydraulic fluid to the storm collection system. This release was reported to AEPA (Ref# 430982) by the facility management company. A written report was not requested by AEPA.	Reportable-3rd Party Release	430982
25-Jul-2024	12621-156 Street NW	A phenol formaldehyde resin (approx. 200L) was released at the Hexion Canada facility (12621-156 Street NW). A 3rd party vacuum truck (GFL Environmental) was called-in to remove contaminants from the spill site. There was no release of resin to the storm / sanitary collection system. This release was reported to AEPA (Ref# 430953) by the company. A written report was issued to AEPA on July 31, 2024.	Reportable-3rd Party Release	430953

30-Jul-2024	3341-34 Street NW	Gasoline (approx. 5L) was released into the private storm collection system at the Esso gas bar located at 3341-34 Street NW. A 3rd party company (QM Environmental) was called-in to remove contaminants from the spill site. The release was contained within the private storm system at this facility and there was no release of gasoline to the EPCOR storm collection system. This release was reported to AEPA (Ref# 431143) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	431143
07-Aug-2024	5607-12 Avenue SW	Animal waste contaminants (unknown volume) were released into the storm collection system (CB471408) from a private residence located at 5607-12 Avenue SW. EPCOR Industrial Wastewater Investigators confirmed that a public complaint had been received about the resident pressure washing animal skulls on their driveway. A Notice to Comply was issued to the homeowner to discontinue the release of restricted wastes into the sewerage system. This release was reported to AEPA (Ref# 431851). A written report was issued to AEPA on August 23, 2024.	Reportable-3rd Party Release	431851
08-Aug-2024	18562-104 Avenue NW	Gasoline (< 200L) was released into the storm collection system (MH404386) from a vehicle fuel theft at Key Food Equipment Services located at 18562-104 Avenue NW. A 3rd party vacuum truck (GFL Environmental) was called to the site to clean-up the impacted storm collection system and surrounding area. A Notice to Comply was issued to the company to discontinue the release of restricted wastes into the sewerage system. This release was reported to AEPA (Ref# 431492) by the company. A written report was issued to AEPA on August 15, 2024.	Reportable-3rd Party Release	431492
08-Aug-2024	5425-38A Avenue NW	Gasoline (approx. 200L) was released into the storm collection system from two vehicle theft incidents located at 5425-38A Avenue NW. As a precaution, EPCOR Industrial Wastewater Investigators deployed absorbent booms at the downstream Outfall #99 (OF217503). There was no visual indicators of hydrocarbons present at the outfall at the time of inspection. A 3rd party environmental company (GFL Environmental) was called-in to remove contaminants from impacted storm collection system and surrounding area. This release was reported to AEPA (Ref# 431494) by City of Edmonton – Fire Services. A written report was issued to AEPA on August 15, 2024.	Reportable-3rd Party Release	431494
11-Aug-2024	17127-80 Avenue NW	Motor oil (approx. 1L) was released into the storm collection system (CB222254) from a private vehicle located at 17127-80 Avenue NW. EPCOR Industrial Wastewater Investigators confirmed that the motor oil had been pressure washed by a nearby resident into the storm catch basin. A 3rd party environmental company (GFL Environmental) was called-in to remove contaminants from the impacted storm collection system and surrounding area. A Notice to Comply was issued to the vehicle owner to discontinue the release of restricted waste into the sewerage system. This release was reported to AEPA (Ref# 431633) by the City of Edmonton. A written report was issued to AEPA on August 19, 2024.	Reportable-3rd Party Release	431633
14-Aug-2024	2040-Ware Road NW	Hydraulic fluid (approx. 1L) was released into the storm collection system (CB496892) from a Collective Waste Solutions garbage truck located at 2040-Ware Road NW. EPCOR Industrial Wastewater Investigators confirmed that hydraulic fluid contaminants had not reached the downstream Windermere #11 SWMF (SWM516571). A 3rd party vactor truck (GFL Environmental) was called-in to remove contaminants from the impacted catch basin and surrounding area. A Notice to Comply was issued to the company to discontinue the release of restricted waste into the sewerage system. This release was reported to AEPA (Ref# 431781) by the company. A written report was issued to AEPA on August 20, 2024.	Reportable-3rd Party Release	431781
19-Aug-2024	64-Avenue & 109-Street NW	Coolant (approx. 5L) was released into the storm collection system (CB228621) from a damaged City of Edmonton bus located at 64-Avenue & 109-Street NW. EPCOR equipment was mobilized to the site to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 431953) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	431953
20-Aug-2024	1080-Wanyandi Way NW	A concrete slurry (unknown volume) was released into the storm collection system (CB419725) from a private company (Master Concrete Corp.) located at 1080-Wanyandi Way NW. A 3rd party vactor truck (First Call Energy) was called-in to remove contaminants from the impacted catch basin and surrounding area. A Notice to Comply was issued to the company to discontinue the release of prohibited waste into the sewerage system. This release was reported to AEPA (Ref# 432236) by the company. A written report was requested by AEPA.	Reportable-3rd Party Release	432236
21-Aug-2024	12621-156 Street NW	Potable water (approx. 180L) was released into the storm collection system (CB419725) from a private company (Hexion Canada) located at 12621-156 Street NW. The company had been cleaning some of their outside tanks using potable water and the pump used for the flushing of these tanks was leaking. A 3rd party vactor truck was called-in to remove contaminants from the impacted catch basin and surrounding area. A Notice to Comply was issued to the company to discontinue the release of restricted waste (Ammonia-Nitrogen at 12.7 mg/L, Chlorinated Water and E. coli at 380 CFU/100ml) into the sewerage system. This release was reported to AEPA (Ref# 432071 / 432352) by the company. A written report was issued to AEPA on August 28, 2024.	Reportable-3rd Party Release	432071 / 432352

22-Aug-2024	2832-126 Street NW	Sample results of the wastewater from the 30th Avenue storm trunkline (MH208496) located NW of 29-Avenue & 126-Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 1,730,000 MPN/100 mL. The 1264 hectare 30th Avenue storm basin was sampled under a requirement of EPCOR AEPA Approval to Operate 639-03-07. This storm line discharges to the North Saskatchewan River at storm Outfall #9 (OF207873) located approximately 150m North of 729-Riddle Street NW. The original sample from this location was collected on August 21, 2024. On August 24th an obstructed sanitary main line at the intersection of 19-Avenue & 48-Street NW was identified as surcharging into the storm collection system. This surcharge was identified as the cause of the elevated E.coli levels in the storm collection system. EPCOR equipment was mobilized to the site and removed the obstruction, restoring flow to the downstream sanitary system and stopping the release of untreated wastewater into the storm collection system. EPCOR will continue to monitor the 30th Avenue storm sewer basin, and work is ongoing to complete additional repairs to the storm and sanitary collection system. This release was reported to AEPA (Ref# 432141). A written report was issued to AEPA on August 30, 2024.	Reportable-Internal	432141
23-Aug-2024	75-Street & Whitemud Drive NW	Gasoline (approx. 50L) was released into the storm collection system (CB233394) from a damaged commercial vehicle (Englobe Corp.) located at 75-Street & Whitemud Drive NW. Due to a recent rainfall, EPCOR Industrial Wastewater Investigators did not observe any contaminants in the storm catch basins near the spill site. The investigators traced the storm line to Mill Creek Outfall# 196 (OF385992) and did not detect any fuel residue at the outfall. As a precaution, the investigators placed absorbent booms downstream of the outfall. This release was reported to AEPA by EPCOR (Ref# 432171) and by the company (Ref# 432179). A written report was requested by AEPA. This report will be issued to AEPA by the company	Reportable-3rd Party Release	432171
23-Aug-2024	9502-86 Street NW	Styrofoam pellets (unknown volume) were released into a catch basin (CB581401) by a private contractor (Wilkinson Lucas Ltd.) located at 9502-86 Street NW. EPCOR Industrial Wastewater Investigators confirmed that the catch basin at this location releases downstream into the combined sewer system. A 3rd party vactor truck was called-in to remove contaminants from the impacted catch basin and surrounding area. A Notice to Comply was issued to the contractor to discontinue the release of prohibited waste (Styrofoam) into the sewerage system. This release was reported to AEPA (Ref# 432167) by the City of Edmonton. A written report was issued to AEPA on August 27, 2024.	Reportable-3rd Party Release	432167
25-Aug-2024	3611-145 Avenue NW	Gasoline (approx. 50L) was released into a private storm catch basin from a private vehicle fuel theft incident at 3611-145 Avenue NW. A 3rd party vacuum truck (GFL Environmental) was called-in to remove contaminants from the impacted storm collection system (MH299742) and surrounding area. This release was reported to AEPA (Ref# 432196) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	432196
03-Sep-2024	2815-109A Street NW	Sample results of the wastewater from a private storm manhole located at a residential condominium complex (2815-109A Street NW) were received and reviewed by EPCOR Monitoring & Compliance. The result exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 54,000 CFU/100 mL. The original sample from this location was collected on August 27, 2024 by EPCOR Industrial Wastewater Investigators. A Notice to Comply was issued to the property management company to identify and repair the cross-connection. This release was reported to AEPA (Ref# 432520). A written report was issued to AEPA on September 10, 2024.	Reportable-3rd Party Release	432520
03-Sep-2024	4950-101 Avenue NW	Untreated wastewater (unknown volume) was released into the storm collection system from a sanitary line surcharge at a business complex (4950-101 Avenue NW). The property manager for the complex confirmed that the surcharge was first noticed on August 29, 2024. EPCOR Industrial Wastewater Investigators observed untreated wastewater surcharging from a private sanitary manhole and releasing into a nearby private storm catch basin. The property management company called-in a 3rd party vacuum truck to release the sanitary line blockage (grease) and clean the surrounding area. The untreated wastewater that entered the storm collection system would have discharged thru storm Outfall# 105 (OF268790). A Notice to Comply was issued to the property management company to discontinue the release of prohibited waste to the sewerage system. This release was reported to AEPA (Ref# 432536) by the property management company. A written report was issued to AEPA on September 3, 2024.	Reportable-3rd Party Release	432536

04-Sep-2024	95-Avenue & Riverside Crescent NW	Sample results of the wastewater from a storm manhole (MH240560) located at 95-Avenue & Riverside Crescent NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 330,000 CFU/100 mL. The original sample from this location was collected on August 27, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. EPCOR will work with impacted properties to identify and correct sanitary cross-connections to the storm collection system. The release was reported to AEPA (Ref# 432581). A written report was issued to AEPA on September 11, 2024.	Reportable-Internal	432581
04-Sep-2024	5611-128 Avenue NW	Diesel exhaust fluid (approx. 5L) was released from a leaking fill hose at the Kennedale fuel station (5611-128 Avenue NW). The release was cleaned-up by an EPCOR Wastewater Collection crew using absorbent material from a spill kit. There was no release of diesel exhaust fluid to the storm / sanitary collection system. The release was reported to AEPA (Ref# 432685) by the City of Edmonton. A written report was issued to AEPA on September 12, 2024.	Reportable-3rd Party Release	432685
04-Sep-2024	1516-Blackmore Way SW	EPCOR contractor (PME Inc.) notified EPCOR about a turbidity exceedance at Outfall# 270 (OF376819) located NE of 1516-Blackmore Way SW. This exceedance was caused by turbid water making its way under the turbidity isolation curtain during excavation activity along the bank of Blackmud Creek near the construction site. Construction activity was stopped immediately and the isolation curtain was sealed and water pumping began within the isolation. After 2 hours, the turbidity had returned below the allowable threshold limits and contractor was able to proceed with work. This release was reported to AEPA (Ref# 432600) by the contractor. A written report was issued to AEPA on September 11, 2024.	Reportable-3rd Party Release	432600
05-Sep-2024	186-Street & Stony Plain Road NW	Coolant (approx. 1L) was released from a vehicle accident at 186-Street & Stony Plain Road NW. The release was cleaned-up by City of Edmonton – Fire Services using absorbent material from a spill kit. EPCOR Industrial Wastewater Investigators confirmed that there was no release of coolant to the storm / sanitary collection system. The release was reported to AEPA (Ref# 432603) by City of Edmonton – Fire Services. A written report was issued to AEPA on September 11, 2024.	Reportable-3rd Party Release	432603
07-Sep-2024	17-Street & Ellerslie Road SW	EPCOR Industrial Wastewater Investigators responded to a report of a vehicle accident at a natural pond located near 17-Street & Ellerslie Road SW. The investigators confirmed that the vehicle had been removed from the accident site and no sheen / odours were observed in the pond. This pond is not connected to the EPCOR storm collection system. This event was reported to AEPA (Ref# 432716). A written report was not requested by AEPA.	Reportable-3rd Party Release	432716
08-Sep-2024	7055-Argyll Road NW	Untreated wastewater (unknown volume) was released into the storm collection system (CB232199) from a sanitary line surcharge at the Pure Casino facility (7055-Argyll Road NW). EPCOR Wastewater Collection equipment was mobilized to the site and released the sanitary line blockage (grease) and cleaned the impacted storm collection system. This release was reported to AEPA (Ref# 432778) by the facility. A written report was issued to AEPA on September 8, 2024.	Reportable-3rd Party Release	432778
09-Sep-2024	9759-92 Street NW	Untreated wastewater (unknown volume) was released thru an interconnection (IC-266) located at 9759-92 Street NW. EPCOR staff responded to an alarm signal at the interconnection and confirmed that a blockage (a build-up of sanitary solids) had occurred in the downstream combined sewer pipe (PIP6606). This blockage released a mixture of untreated wastewater / stormwater thru the interconnection into the nearby storm collection system. EPCOR Wastewater Collection equipment was mobilized to the site and released the blockage. The untreated wastewater from the interconnection would have released thru storm Outfall# 256 (OF244320).This release was reported to AEPA (Ref# 432847). A written report was issued to AEPA on September 17, 2024.	Reportable-Internal	432847
13-Sep-2024	85-Street & Conners Road NW	Coolant (approx. 10L) was released from a City of Edmonton bus accident at 85-Street & Conners Road NW. The release was cleaned-up by the City of Edmonton using absorbent material from a spill kit. EPCOR Industrial Wastewater Investigators confirmed that the release at this location would have entered the combined sewer system. This release was reported to AEPA (Ref# 432998) by the City of Edmonton. A written report was issued to AEPA on September 18, 2024.	Reportable-3rd Party Release	432998
16-Sep-2024	2707-Mill Woods Road NW	Glycol (approx. 10L) was released into the sanitary sewer system from the mechanical room at the J. Percy Page School (2707-Mill Woods Road NW). EPCOR Industrial Wastewater Investigators confirmed that there was no release of glycol to the storm collection system. This release was reported to AEPA (Ref# 433074) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	433074

18-Sep-2024	209-Desrochers Boulevard SW	Potable water / charred solids (unknown volume) was released into the storm collection system from firefighting activities at 209-Desrochers Boulevard SW. EPCOR Industrial Wastewater Investigators tested the Total Chlorine levels at a downstream storm manhole (MH426622) and the chlorine levels were measured at 0.34 ppm. The Investigators placed dechlorination pucks in the manhole to remove chlorine residue. The investigators confirmed that there was no impact to the downstream Desrochers #1 SWMF (SWM524349). This release was reported to AEPA (Ref# 433141) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	433141
18-Sep-2024	20512-58 Avenue NW	A concrete slurry (unknown volume) was released into a storm catch basin (CB411216) by Concept Concrete located at 20512-58 Avenue NW. The original release occurred around August 18, 2024 and EPCOR Industrial Wastewater Investigators were notified on September 18, 2024. Due to the time delay, the investigators did not observe any evidence of contaminants inside the catch basin. A Notice to Comply was issued to the concrete company to discontinue the release of prohibited waste to the sewerage system. This release was reported to AEPA (Ref# 433200) by the City of Edmonton. A written report was issued to AEPA on October 1, 2024.	Reportable-3rd Party Release	433200
20-Sep-2024	12407-106 Avenue NW	Potable water (approx. 0.5 cubic meters) was released into the storm collection system (CB259843) by a TC Infrastructure Services hydro vac located at 12407-106 Avenue NW. EPCOR Industrial Wastewater Investigators added dechlorination pucks to the impacted catch basin to remove any chlorine residue. A TC infrastructure representative confirmed that they will be speaking to their staff about not releasing potable water to the EPCOR storm collection system without prior approval. This release was reported to AEPA (Ref# 433295) by the company. A written report was not requested by AEPA.	Reportable-3rd Party Release	433295
23-Sep-2024	11219-58 Avenue NW	Tiling grout (unknown volume) was released onto an alleyway by a resident located at 11219-58 Avenue NW. The release was contained on the alleyway and was cleaned up by a City of Edmonton sweeper. EPCOR Industrial Wastewater Investigators confirmed that there was no release of grout to the storm / sanitary collection system. This release was reported to AEPA (Ref# 433318) by the City of Edmonton. A written report was issued to AEPA on September 23, 2024.	Reportable-3rd Party Release	433318
24-Sep-2024	9929-Jasper Avenue NW	Coolant (approx. 1L) was released into a storm catch basin (CB564178) from a City of Edmonton bus located at 9929-Jasper Avenue NW. EPCOR Industrial Wastewater Investigators confirmed that the coolant was contained within the catch basin sump. EPCOR Wastewater Collection equipment was mobilized to the site to remove contaminants from the impacted catch basin and surrounding area. There was no release of coolant to the storm collection system. This release was reported to AEPA (Ref# 433431) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	433431
24-Sep-2024	6900-85 Street NW	Hydraulic fluid (approx. 30L) was released from a City of Edmonton lawnmower located near 6900-85 Street NW. EPCOR Industrial Wastewater Investigators confirmed that the hydraulic fluid was contained on an asphalt roadway. The spill site was cleaned-up by a City of Edmonton street sweeper. There was no release of hydraulic fluid to the storm / sanitary collection system. This release was reported to AEPA (Ref# 433399) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	433399
01-Oct-2024	11403-84 Street NW	Untreated wastewater (unknown volume) was released thru an interconnection (IC-78) located at 11403-84 Street NW. EPCOR staff responded to an alarm signal at the interconnection and confirmed that a blockage (a build-up of sanitary solids) had occurred in the downstream combined sewer pipe (PIP31904). This blockage released a mixture of untreated wastewater / stormwater thru the interconnection into the nearby storm collection system (MH263708). EPCOR Wastewater Collection equipment was mobilized to the site and released the blockage. The untreated wastewater from the interconnection would have discharged thru storm Outfall# 56 (OF261549). This release was reported to AEPA (Ref# 433687). A written report was issued to AEPA on October 7, 2024.	Reportable-Internal	433687
06-Oct-2024	4827-17 Avenue NW	Gasoline (approx. 5L) was released into the storm collection system (CB203899) from firefighting activities at a private residence located at 4827-17 Avenue NW. EPCOR Industrial Wastewater Investigators placed an absorbent boom inside the impacted catch basin to remove any fuel residue. The wastewater from this incident would have discharged thru storm Outfall# 9 (OF207873). This release was reported to AEPA (Ref# 433921) by City of Edmonton – Fire Services. A written report was not requested by AEPA.	Reportable-3rd Party Release	433921
06-Oct-2024	6803-72 Avenue NW	A nitric acid solution (approx. 800L) was released into the storm collection system (MH231819) from a damaged tote at Reinhold Industries Ltd. (6803-72 Avenue NW). A 3rd party vacuum truck was called-in to remove acid residue from the impacted storm catch basin. EPCOR Industrial Wastewater Investigators confirmed that a rainfall event after the release would have flushed the acid solution thru the EPCOR storm collection system. The wastewater from this incident would have discharged thru storm Outfall# 196 (OF385992). A Notice to Comply was issued to the company to discontinue the prohibited or restricted waste into the sewerage system. This release was reported to AEPA (Ref# 434079) by the company. A written report was issued to AEPA on October 16, 2024.	Reportable-3rd Party Release	434079

08-Oct-2024	45-Avenue & 95-Street NW	Diesel fuel (< 40L) was released into a storm catch basin (MH211589) from a vehicle fuel theft at U-Haul Moving & Storage located at 45-Avenue & 95-Street NW. EPCOR Industrial Wastewater Investigators confirmed that the fuel was contained within the catch basin sump. A 3rd party vacuum truck (GFL Environmental) was called to the site to clean-up the impacted storm catch basin and surrounding area. This release was reported to AEPA (Ref# 433971) by the company. A written report was issued to AEPA on October 15, 2024.	Reportable-3rd Party Release	433971
08-Oct-2024	10138-123 Street NW	Untreated wastewater (unknown volume) was released into the storm collection system (CB346260) from a combined sewer line surcharge at a residential building complex located at 10138-123 Street NW. During construction at this site, a contractor (Synergy Project Ltd.) observed that untreated wastewater had entered the building sumps and elevator pit. The contractor pumped the accumulated wastewater inside the building complex into a nearby storm catch basin (CB346260). EPCOR equipment was mobilized to the site to release the blockage and flush contaminants from the storm line. The contractor called-in a 3rd party vacuum truck to remove contaminated wastewater from the building sumps and elevator pit. The untreated wastewater that entered the storm collection system would have discharged thru storm Outfall# 31 (OF379692). This release was reported to AEPA (Ref# 433999) by the contractor. A written report was issued to AEPA on October 15, 2024	Reportable-3rd Party Release	433999
13-Oct-2024	16110-116 Avenue NW.	A liquid sucrose solution (approx. 200L) was released into the storm collection system (MH254750) at Saputo Inc. located at 16110-116 Avenue NW. During a delivery of the sucrose solution, the level sensor on a storage tank malfunctioned and the solution overflowed into a nearby private storm catch basin. A 3rd party vacuum truck was called-in to remove contaminants from the impacted catch basin and surrounding area. A Notice to Comply was issued to the company to discontinue the release of restricted waste into the sewerage system. This release was reported to AEPA (Ref# 434173) by the company. A written report was issued to AEPA on October 15, 2024.	Reportable-3rd Party Release	434173
16-Oct-2024	2504-76 Avenue NW	Petroleum hydrocarbons (unknown volume) were released into Gold Bar Creek (2504-76 Avenue NW) from a City of Edmonton contractor. During excavation activity at a construction worksite, the contractor (Alberco Construction Ltd.) observed hydrocarbon contaminants coming from the soil on the south bank of the creek. The contractor removed the contaminated soil and covered over the downstream area. This release was reported to AEPA (Ref# 434496) by the City of Edmonton. A written report was issued to AEPA on October 30, 2024.	Reportable-3rd Party Release	434496
22-Oct-2024	1214-101 Street SW	Diesel fuel (approx. 50-100L) was released into the storm collection system (MH429942) from a vehicle fuel theft at Royal Pizza located at 1214-101 Street SW. A 3rd party vacuum truck (GFL Environmental) was called-in to clean-up the impacted storm collection system and surrounding area. The diesel fuel contaminants that entered the storm collection system would have discharged thru storm Outfall# 290 (OF398556). This release was reported to AEPA (Ref# 434460). A written report was issued to AEPA on October 30, 2024.	Reportable-3rd Party Release	434460
22-Oct-2024	8016-161 Street NW	Sample results of the wastewater from a storm manhole (MH238723) located at 8016-161 Street NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 210,000 CFU/100 mL. The original sample from this location was collected on October 17, 2024 by EPCOR Industrial Wastewater Investigators. EPCOR will initiate further investigations into this event to determine the source of the cross-connection at this location. EPCOR will work with impacted properties to identify and correct sanitary cross-connections to the storm collection system. This release was reported to AEPA (Ref# 434439). A written report was issued to AEPA on October 29, 2024.	Reportable-3rd Party Release	434439
23-Oct-2024	11710-87 Avenue NW	Sample results of the wastewater from a storm manhole (MH24738) located at 11710-87 Avenue NW were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for E. coli at 2,500,000 CFU/100 mL. The original sample from this location was collected on October 23, 2024. A Notice to Comply was issued to the property management company to discontinue the release of matter that is not permitted (untreated wastewater) into the storm sewer system. This release was reported to AEPA (Ref# 434495). A written report was issued to AEPA on October 30, 2024.	Reportable-3rd Party Release	434495
26-Oct-2024	89-Avenue & 112-Street NW	Glycol (approx. 36L) was released into the sanitary collection system from the University of Alberta – Hub Mall located at 89-Avenue & 112-Street NW. EPCOR Industrial Wastewater Investigators confirmed that the glycol was release into a floor drain from a faulty relief valve in the mechanical room at this facility. This release was reported to AEPA (Ref# 434496) by the University of Alberta. A written report was issued to AEPA on October 31, 2024.	Reportable-3rd Party Release	434496

28-Oct-2024	5545-89 Street NW	Sample results of the wastewater from a private storm manhole located at Edmonton Exchanger (5545-89 Street NW) were received and reviewed by EPCOR Monitoring & Compliance. The results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses" for Nickel at 0.0868 mg/L and Zinc at 0.359 mg/L. The original sample from this location was collected on October 16, 2024. A Notice to Comply was issued to the company to discontinue the release of restricted wastes into the storm sewer system. This release was reported to AEPA (Ref# 434951) by the company. A written report was issued to AEPA on November 6, 2024.	Reportable-3rd Party Release	434951
30-Oct-2024	19-Avenue & 209A-Street NW	Tack oil (approx. 5L) was released from a private contractor (Park Paving) vehicle into a private storm catch basin located at 19-Avenue & 209A-Street NW. EPCOR Industrial Wastewater Investigators confirmed that the tack oil was contained within the catch basin sump. A 3rd party vacuum truck (Canessco Services Inc.) was called to the site to clean-up the impacted catch basin and surrounding area. There was no release of tack oil to the storm collection system. This release was reported to AEPA (Ref# 434758) by the contractor. A written report was issued to AEPA on November 8, 2024.	Reportable-3rd Party Release	434758
30-Oct-2024	4950-101 Avenue NW	Untreated wastewater (unknown volume) was released into the storm collection system from a sanitary line surcharge at a business complex (4950-101 Avenue NW). The property manager for the complex confirmed that the surcharge was first noticed on October 30, 2024, but was not reported to EPCOR until November 4th. The property management company called-in a 3rd party vacuum truck to release the sanitary line blockage (grease) and clean the surrounding area. The untreated wastewater that entered the storm collection system would have discharged thru storm Outfall# 105 (OF268790). This release was reported to AEPA (Ref# 434890) by the property management company. A written report was issued to AEPA on November 4, 2024.	Reportable-3rd Party Release	434890
03-Nov-2024	2052-74 Street NW	An unknown volume of untreated wastewater was released into the storm collection system as a result of a blockage in the sanitary system located at 2052-74 Street NW. An odour compliant resulted in the location of the blockage in the sanitary system which was confirmed to be actively releasing from the double barrel into the storm system. EPCOR Wastewater Collection equipment was mobilized to the site and released the blockage discontinuing the release to the storm system. This release was reported to AEPA (Ref# 434863). A written report was issued to AEPA on November 7, 2024.	Reportable-Internal	434863
07-Nov-2024	6609 Gateway Blvd NW	Sample results obtained from a 24-hour combined sewer composite sample from City of Edmonton's SW yard located at 6609 Gateway Blvd NW were reviewed by the City of Edmonton. The results of the sample exceeded By-law 19627 Appendix B Restricted Wastes Applicable to Sanitary and Combined Sewers for Hydrocarbons at 296.2 mg/L (limit 100 mg/L) and sulphide at 12 mg/L (limit 3 mg/L). This release was reported to AEPA (Ref# 434979) by the City of Edmonton. A written report was issued to AEPA on November 7, 2024.	Reportable-3rd Party Release	434979
08-Nov-2024	9604 Jasper Avenue	Less than 5 L of antifreeze was releases into a storm catch basin CB384891 from a City of Edmonton bus located at 9604 Jasper Avenue. Edmonton Fire Department was on site and removed contaminants from the impacted catch basin and surrounding area. City of Edmonton employees was on scene and cleaned up the remainder of the spill. This release was reported to AEPA (Ref# 435009) by the City of Edmonton. A written report was issued to AEPA on November 13, 2024.	Reportable-3rd Party Release	435009
08-Nov-2024	4803 - 74 Avenue NW.	Approximately 130 L of gasoline was released into the storm collection system manholes MH233240 from a vehicle located at 4803 - 74 Avenue NW. Investigators observed a trail of absorbent leading from a truck to the private catch basin and visible product in the catch basin up to the lead. Investigators checked the downstream manhole MH233238 and observed visible product. Manhole MH233237 further downstream also contained visible product. Investigators installed a boom in downstream manhole MH233237. A sample was collected from the private catch basin for AEPA parameters, Oil and Grease, hydrocarbons and BTEX. Business was informed to call a 3rd party to clean the impacted private catch basin and the private line leading to manhole MH233240 and to report the release to AEPA. This release was reported to AEPA (Ref# 435019) by the contractor. A written report was issued to AEPA on November 8, 2024.	Reportable-3rd Party Release	435019
10-Nov-2024	3727 Cameron heights	Approximately 10 L of hydraulic oil was released into a catch basin CB468921 located at 3727 Cameron heights place in to catch basin. Contamination had not left the catch basin and was contained. A 3rd party vacuum truck was called-in to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 435077) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	435077

15-Nov-2024	8552 Roper Rd NW	Approximately 30 L of gasoline was released from a damaged fuel tank located at 8552 Roper Rd NW. The fuel tank was drilled into sometime between the evening of November 14 and morning of November 15 and release was observed at 10:30 on November 15. It is estimated that 5 - 10 L of gasoline made its way into the private collection system. Investigators moved downstream to last private storm manhole before property connects to 900 mm EPCOR mainline and observed a steady flow in manhole leaving property. 900mm mainline discharges to NSR at outfall OF196. Sample was collected from private storm manhole and outfall OF196. A 3rd party vactor truck was called-in to remove contaminants from the impacted catch basin and surrounding area. This release was reported to AEPA (Ref# 435273) by the contractor. A written report was not requested by AEPA.	Reportable-3rd Party Release	435273
17-Nov-2024	30 Avenue and 116 Street NW	A member of the public notified EPCOR of sewer odour in the neighbourhood of 30 Avenue and 116 Street NW, Edmonton, AB. Inspection findings indicate there is a source of untreated waste water entering the storm system near the intersection of Westbrook Drive and 119 Street. Further bacterial sampling has been completed to narrow down the source contributing to the contamination. Once area has been narrowed down televising and dye testing of the storm lines in the area will be scheduled. This release was reported to AEPA (Ref# 435402) by EPCOR Monitoring & Compliance on November 20, 2024. A written report was issued to AEPA on November 26, 2024.	Reportable-3rd Party Release	435402
19-Nov-2024	403 McConachie Way NW	Approximately 100 L of diesel fuel was released into a private storm drainage system located at 403 McConachie Way NW and entered the EPCOR drainage system. The spill was contained and cleaned up before impacting the downstream McConachie stormwater management facility SWM444059. When EPCOR Industrial Wastewater Investigators arrived onsite the The contractor was still on site cleaning up the diesel from the private storm system. Visible evidence (globules) of diesel, and a strong odour were found at the first EPCOR manhole downstream. This release was reported to AEPA (Ref# 435373) by the contractor. A written report was not requested by AEPA.	Reportable-3rd Party Release	435373
22-Nov-2024	13003-56 Street NW	Approximately 10 L of hydraulic oil entered a sump at the City of Edmonton Kennedale Traffic Field Operations Facility located at 13003-56 Street NW. Investigators contacted the City of Edmonton and it was determined that 10L of hydraulic fluid entered the primary stage of the sump within one of the maintenance garages and no material exited the sump and the spill did not enter the drainage system. A 3rd party was called in to remove hydraulic oil. This release was reported to AEPA (Ref# 435473) by the City of Edmonton and a written report was provided by the City of Edmonton.	Reportable-3rd Party Release	435473
27-Nov-2024	11159 73 Ave NW	EPCOR Monitoring and Compliance was alerted to the possible dumping of RV waste into a manhole MH224905 located at 11159 73 Ave NW based on evidence found by and EPCOR line televising crew. Black sludge with strong odour consistent with anoixic mud or sanitary wastewater was located in the manhole. Based on a number of observations, this may be the result of someone repeatedly dumping at this location. Currently there is no indication as to who may be responsible. Sample results exceeded Bylaw 19627 Appendix C and Bylaw 18093 Schedule B "Restricted Wastes Applicable to Storm Sewers and Watercourses for ammonia, total phosphorus and E. coli - all of which are consistent with domestic wastewater. EPCOR has already flushed the impacted portion of the stormwater system. Letters are being sent out to surrounding residents to educate them, and there is the possibility of further action if the people responsible are identified. This release was reported to AEPA (Ref#435650). A written report was issued to AEPA on December 2, 2024.	Reportable-3rd Party Release	435650
30-Nov-2024	4205 76 Avenue	An unknown volume of potable water and charred solids were released into the storm collection system from firefighting activities at 4205 76 Avenue. Fire was located at an industrial site and large volume of water used. Potable water from fire fighting activities were observed in the gutter extending approximately six blocks west of site along the south gutter, north of the property, entering various catch basins. No sheen, or odour observed onsite or at the release point catch basin MH233163 by investigators. A sample was collected from manhole MH233163 as well as Mill Creek separator as water did run off into Mill Creek. The incident was also reported to Environment and Climate Change Canada (ECCC) by Edmonton Fire and Rescue Services due to runoff reaching Mill Creek. EPCOR provided updates to ECCC. This release was reported to AEPA (Ref# 435684) by the City of Edmonton. A written report was not requested by AEPA.	Reportable-3rd Party Release	435684

09-Dec-2024	8343 - 120 Street NW	A member of the public notified EPCOR of sewer odour in their garage from storm line. EPCOR personnel checked and identified unusual flow patterns and odours in the storm sewer indicating possible presence of untreated wastewater. EPCOR continued the investigation and sampled storm MH242795 for E.coli - there was insufficient flow present to sample for additional parameters. This storm MH discharges approximately 500m downstream into the North Saskatchewan River at Outfall 23C located approximately 200m west of 8327 - Saskatchewan Drive NW. As the outfall was inaccessible due to safety concerns, the first accessible upstream storm manhole, MH242245, was also sampled on December 10, 2024, for the six approval parameters. Preliminary findings indicate that one or more of the residential customers in the Windsor Park neighbourhood may have sanitary services incorrectly connected to the storm sewer collection system. Further bacteriological sampling, televising, and dye testing of the storm lines in the area are currently being scheduled to narrow down the source of the untreated wastewater. This release was reported to AEPA (Ref# 436151). A written report was issued to AEPA on December 17th, 2024.	Reportable-3rd Party Release	436151
13-Dec-2024	3486 34 St NW Edmonton	A turbidity exceedance of the provincial short-term Total Suspended Solids (TSS) guideline (i.e., instantaneous 25 mg/L increase over background) resulted during the rehabilitation of Outfall 271 located approximately at 3486 34 St NW Edmonton, when sediment-laden water overflowed the isolation after a grey water pump was shut off for the day. The exceedance occurred at approximately 17:30 and concentrations of TSS had returned to background levels by 08:00 on December 14, 2024. AEPA (Ref#436124) was notify of the exceedance. A written report was issued to AEPA on December 14th, 2024.	Reportable-Internal	436124
17-Dec-2024	13315 Buena Vista Rd	Suspected release of coolant to storm collection system at Edmonton Valley Zoo. Monitoring and Compliance called complainant back for more details. No one saw a vehicle leaking it was just their best guess due to color of the substance. Upon further investigation Edmonton Valley Zoo staff realized they had spilled beet juice when making a beet popsicle for the elephants. No EPCOR assets impacted. This release was reported to AEPA by the City of Edmonton employees. (Ref# 436194). A written report was not requested by AEPA.	Reportable-3rd Party Release	436194
18-Dec-2024	SW of 115 - Laurier Drive	An unknown volume of untreated wastewater release into the storm collection system was identified during a review of the televising footage from the inspection. Personnel sampled storm MH221403 for the 6 AEPA parameters. This storm line discharges approximately 4 km downstream into the North Saskatchewan River at Outfall 18, located 200 meters SW of 115 - Laurier Drive. Preliminary findings indicate that one or more of the residential customers in the Thorncliff neighbourhood may have sanitary services incorrectly connected to the storm sewer collection system. Further bacteriological sampling and dye testing of the storm lines in the area are currently being scheduled to narrow down the source of the untreated wastewater. This release was reported to AEPA by the Monitoring and Compliance employees. (Ref# 436215). A written report was issued to AEPA on December 23, 2024.	Reportable-3rd Party Release	436215
19-Dec-2024	2959 Parsons Road NW	Release of approximately 500kgs of mustard into sanitary sewer system. Ventura foods was processing mustard over night and at around 23:45 a pipe connecting the production line to a holding tank had a coupler come loose causing the pipe to detach and released mustard onto the floor. The pipe was releasing for approximately six minutes before the production line was shut down. The holding tank has a low level and high level alarm but there are no sensors on the pipes. Goldbar WWTP was notified of the release at 10:48 on Dec 20,2024. The operator advised that the plant did not experience any issues overnight but took note of the release. This release was reported to AEPA by the Ventura Foods employees (Ref# 436289). A written report was issued to AEPA on December 28, 2024.	Reportable-3rd Party Release	436289

PBP – Plant Bypass
TBP – Total Bypass Plant (including plant and secondary)
SEC – Secondary Bypass Plant

EPE - Enhanced Primary Effluent
EPT – Enhanced Primary Treatment

Outfall 10 - Combined, UV-disinfected (FEC + EPE)
Outfall 20 – Combined Bypass (RAW + PE + EPE)
Outfall 30 - Combined Bypass (RAW + Screened + PE + EPE)

FEC – Final Effluent, Combined
RAW – Influent
BOD$_5$ – 5-day Biological Oxygen Demand

CBOD$_5$ – 5-day Inhibited BOD

TSS – Total Suspended Solids
TP – Total Phosphorus
NH_3-N – Ammonia as nitrogen

MPW – Membrane Product Water
ns – No sample
Avg/Geomean –Geomean for E.coli; Avg for others
